H. CANNELL & SONS.

Swanley, Kent.

DEAR SIR,

We have ventured to send you a list of public and other well-known establishments and institutions in various parts of the world we supply; and from the fact of us having such a large establishment, and exclusively horticultural, of the highest order, and in the best spot in England (300 acres), we can serve you in all probability better than any other firm-Seeds certainly so. We should have much pleasure in hearing from you. We only need a trial order to gain your confidence and recommendations.

H.M. THE QUEEN.
H.R.H. THE PRINCE OF WALES.
H.R.H. THE DUKE OF EDINBURGH.

is our advertising heading, and we have never heard of anyone who has come to see hut what they have always expressed their delight and astonishment at what we have shown them, and have gone away and kindly recommended us.

The following, extracted from the Gardeners' Magazine, fully and pointedly explains the necessity of procuring "l'erfect Seeds" (our Trade Mark), so as to ensure the best results throughout the garden and greeahouses, which is of inestimable value, and is the sole cause of our seeds surpassing all others : - "When it is advisod to secure good seeds, that their product may be good growth, too oftea is it forgotten that, beyond giving good germination, seeds play an important part in the sustenance of the infaat plant. Until roots and leaves are created, the plant germs or growth evolution is dependent for support upon the sap stored in the seed lobes. This character is as evident in the tiniest of seeds as in that of the oak or horse chestaut. The development of roots and leaves is not the product of instantaneous action. It takes time-perhaps two, three, or several days-and until the tiny roots can abstract food from the soil, and leaves can assimilate it, the plant is entirely dependent upon its seed lobes or reservoirs for its existence. How important, therefore, is it that these seed lobes should be perfect, be well furnished with stored sap, as the robustness of the infant plant has all to do with the strength of the plant later in life. Very old seed, as a rule, fails to germinate because the stored sap has become exhausted or is dried up. The seed, perhaps, makes its puny effort to grow, and then collapses. The moral of this is grow only good and, so far as possible, fresh seed."-A.D.

We grow nearly all our own seeds, and it is well known that we spare no expense to procure the best, and every year we select and re-select. It would delight any lover of the garden to see the loveliness of our strains, and the exertions on the part of our foremen to have the best, even to the commonest annuals. Many are so improved that some families are so very different and superior to those produced at the cheapest markets, and retailed by persons that have not the least idea how important it is to those that purchase; whereas we grow and supply them direct to the sowers, and from the finest climate and soil in Europe for producing them. The result is that the strains are better and the seeds are better, coming off our calcareous soil, than in the ordinary black garden mould, and from the chaage they make marvellous growth, and the crop is at least one-third more.

Compliments and best wishes, cordially inviting all to inspect our Seed and Nursery Establishments.

For full particulars see next page

HENRY CANNELL & SONS

HAVE great pleasure in sending all their esteemed Customers a Catalogue for the current year, and at the same time wish to sincerely thank them for their preference towards us.

We need not here eulogise our Kentish Seeds, but simply state, owing to the satisfaction they invariably give, we last year received 2,000 more orders than the previous. As contrary as the past summer was to the growth of plants, we are pleased to state our Stock is in a splendid condition, the strains and varieties being most pure. At six of the largest Exhibitions held in London last year we exhibited the largest and most complete collections of Vegetables and Fruit, and on every occasion we were awarded the highest honours. They proved most interesting to all oeholders, and elaimed great attention in consequence of their importance on the future production of the garden. We nerewith append reports from the Gardening Press:

GARDENERS' CHRONICLE, September 30th, 1893,

Messrs, H. Cannell & Sons, Swanley and Eynsford, staged an "excellent" collection of Vegetables, including almost all kinds now in season. Onions, nice clean samples—Ailsa Craig, Cannells' Globe, Anglo Spanish, Improved Wraxton, Rousham Park Hero, and several others. Their nice young Cabbage Earliest of All, Leeks, Marrows, Savoys, Red Cabbage, Antunin Canliflower, Cannells' Intermediate Carrots, Improved Shorthorn, Cannells' Improved Nantes. Beet. Turnips, Parsnips, Salsafy, Beans (Runner and Freuch), Tomatocs, Peas, Artichokes, Stachy's Tuberifera, Potato Onions, Garlic, and Shallots, were included. Brussels Sprouts, Cannells' Matchless, were very early and in capital condition, having Sprouts ready for the table on stems two feet high; also a collection of Potatocs, good size and quality, together with about torty dishes of Apples. Silver Knightian Medal was awarded.—Royal Horticultural Society's Committee Meeting.

JOURNAL OF HORTICULTURE, September 28th, 1893.

Messrs. II, Cannell & Sons had a very extensive exhibit of Vegetables and Fruit, the whole comprising a hundred dishes, only some of the vegetable "dishes" would about fill a bushel basket. Earliest of All Cabbage was represented by near compact heads, and London Coleworts were fine. Leeks were blanched to the extent of 9 or 10 inches, and robust plants of Brussels Sprouts were crowded with firm knobs. Potatoes, Carrots, Onions, and most other Vegetables in season were included in this representative collection, and a silver-gilt medal unanimously recommended.—Royal Horticultural Society's Show, Drill Hall, September 26th, 1893.

CANNELL & SONS'

VEGETABLES FOR 1894.

JERUSALEM ARTICHORS, WHILE ONLYNDS

CHOU DE BEDFORD

Artichoke, Jerusalem, White Skinned—The tubers have a clear white skin instead of the reddish tint of the old variety. They are also more regularly formed, having a tendency to a globular shape, and the quality is excellent; a untritious and easily-cultivated winter vegetable, and will undoubtedly tend to increase its cultivation and popularity. Price 5s. per peck of 14 lbs.

Chou de Bedford—A distinct new hardy vegetable between Chou de Burghley and Coure Tronchada, or Portugese Cabbage, but enturely different from either. The form and appearance is very beautiful and strlking, and at ome impresses the observer as possessing excellent table qualities. Light green colour, with the exception of the broad fleshy staks and mid-ribs of the loaves, which are pure white, and which twisting and curling round, form a large solid white heart, the flavour, when cooked, being very rich and delicate, and free from the rankness attending most of the cabbage tribe, whilst the plant is quite lardy and can be sown and grown either for autumn, whater, or spring use; will withstand the cold and variable winter entirely unprotected; a distinct and useful new vegetable, the shavour of which is approved by many in preference even to that of a young candiflower. Sow in April and May for autumn and winter, and in August and September for spring use. Price, in sealed packets, 1s.

Cabbage, Earliest of All—Strongly recommended as the very best in cultivation for spring sowing. There is no waste with it, the heads being compact and neat in their growth. It can, therefore, be planted close in the rows. The quality is delicious, being tender and marrow-like. For sowing in succession it is most useful.

Per pkt., 1s.

CUCUMBER, BLAIR'S PROLIVIC.

MELON, DUCHESS OF YORK,

Cucumber, Blair's Prolific—Raised by Mr. Blair, of Trentham Gardens, who describes it thus:—"A handsome variety, the result of a cross between Lockie's Perfection and Royal Windsor. The fruit are borne in great profusion, of a deep green colour, and heavily bloomed; of a beautiful symmetrical shape, with no neck, and grows longer than Lockie's Perfection A valuable variety for either summer or winter cultivation." Price 2s. per pkt.

Cucumber Triumph—The result of a cross between Long Ridge and Telegraph, and is the largest hardy variety in commerce; an abundant cropper. One small plant has been known to produce over 24 fruits, many of them 20 to 23 inches in length. Per pkt., 1s. 6d.

Melon, Trevoux Prolific—A new Cautelonp Melon, nwarded a Silver Med.l by the Horticultural Society of the Rhone. The flesh is of a fine scirlet colour, very melting, and of delicions flavour and perfume. The fruit is of good size, very solid (very few seeds), with extremely thin skin, which is of a golden colour. It is very productive. Per pkt., 1s.

MELON, DUCHESS OF YORK.

Raised by Mr. McIntyre, Darlington, and will take a leading place on the table as well as an exhibition unriety. It has already made its mark as a prizetaker, having gained three first prizes this last season at York, Newcastle, and Trentham, against large conportion of other leading kinds. The raiser gives the following description of its merits. The Duchess of York is a cross between Best of All and Hero of Lackinge; fruit medium \$20, white-fleshed, colour golden, and beautifully netted; sets freely, of robust constitution, thick in the flesh, and of a delicious flavour." Per pkt., 2s.

ONION, INWOOD FAVOURITE.

Onion, Inwood Favourite—This splendid new Onion, raised by Mr T. Wilkins, Gardener to Lady Theodora Guest, was sent out last Spring, and has been much admired. It is a cross between Rousham Park and Sutton's Crimson Globe, but is far handsomer than either; it has a greater depth of bulb than Rousham Park, and in shape is nearly globular, with conspicuous shoulders; in colour it is pale pink. Bulbs have been grown during the last two sensons nearly two pounds in weight; it is, therefore, on account of its great size and fine form one of the best Exhibition sorts yet introduced. The flesh is remarkably firm and solid, and it has been proved a splendid keeping variety. Being a strong grower, it resists mildew better than many sorts of weaker constitution. It has been awarded several certificates at important Shows.

SANDY PRIZE,

Onion, Sandy Prize White Spanish—Out of upwards of 60 varieties of Onions from all the best sources tried by the Royal Horticultural Society, this, with another Oniou, only was selected and recommended as the best of the White Spanish type.

There is no other Ouion which combines size with so many useful qualities as the well tried true White Spanish Onion, which is every year becoming more difficult to obtain true. This strain is the result of many years constant selection and continued seeding away from all other varieties, and from seed sown broadcast in the spring fine bulbs, 17 inches in circumference, have been produced. All the seed we offer is warranted from the largest selected bulbs. Price, in sealed packet, 1s.

Onion, Concord—New Intermediate—A very large-sized, handsome, semi-globular variety, raised by crossing the finest of the White Spanish type with the early white globe Valencia. This variety comes early, and ripening well is not to be surpassed for good keeping, quality, and olidity, and will give a greater weight of produce than all other spring onions, and if sown in the open early in the spring very large bulbs can be grown.

Price, in sealed packets, 1s.

Pea, Censor—Awarded Full Marks by the R.H.S. A deep green wrinkled marrow, height 3 feet, producing most profesely large, deep green, well-filled, pointed pods; peas large, and of the most exquisite flavour; fine, robust grower; a most desirable variety. In scaled half-pint pkts., 2s. 6d.

Pea, Conundrum—This is a grand medium and late wrinkled marrow Pea of robust habit and growth, extremely prolific either for garden or field culture; it grows 7 ft. high, when comparatively old it retains its flavour when other sorts would be unfit for table. The Pea is large, and pods are long and well filled. In sealed pint pkts., 5s.

Pea, Celebrity—A main crop wrinkled marrow, 5 ft. high, and somewhat after the form of Forty-fold, having the best qualities of that old favourite; similar in flavour and extremely productive, but with finer pods. For appearance, flavour, and cropping, we can confidently recommend it, these being qualities which render it particularly suitable for market purposes as well as for the hest private gardens. Price per half-pint, 1s. 6d.

Pea, Critic—Awarded highest marks in the Chiswick Trials of the Royal Horticultural Society. A green wrinkled marrow, growing 4½ ft. high, and producing a profusion of well-filled deep green pods. The peas are large, of the finest quality, and retain their beautiful colour when cooked. A choice second-early kind. Per sealed quarter-pint pkts., 2s. 6d.

Pea, Barnet Hero—An excellent variety, growing to a beight of $3\frac{1}{2}$ ft., of robust branching habit, its distinguishing feature being the immense size to which the Peas attain. The pods, produced in pairs, are quite straight, good size, and closely filled with seven or eight very large peas, which when cooked are a beautiful dark green, and of the sweetest flavour; one of the best that can be grown for a main crop. Per pint, 1s. 6d.

Savoy Cabbage, Ormskirk Late Green—It is of large size and very handsome shape, very hardy, and being late, comes into market when other sorts are over, and after a severe winter is often the only vegetable of its class in good condition. The heart is green in colour, and the outer leaves, being much darker, contrast beautifully. Per pkt., 1s.

Scarlet Runner Bean, Hill's Prize—It is undoubtedly the finest of all the race; a grand exhibition variety, a great cropper, and bears very long, beautifully shaped, very fleshy pods. It is a true Scarlet Runner, and is not crossed with a white seeded kind. Awarded a First-Class Certificate Royal Horticultural Society. In scaled pkts., 1s. 6d. eacb.

Tomato, Dunedin Favourite—We cannot give a better description of it than that which appeared in the Gardener's Chronicle, which was as follows:—"Among fifteen varieties, Dunedin Favourite was the earliest to ripen, and the first fruits were as perfectly symmetrical as those that followed. The flesh is particularly rich, and contains but few seeds; the colour is a very attractive combination of deep scarlet and crimson; the skiu is glossy. In weight it exceeds all others, being very solid, and with little or no core, whilst its level and regular shape is a great advantage in packing for market." Per pkt., 1s.

Tomato, Ladybird—A splendid setting variety, beautiful glossy scarlet colonr, fruit medium and uniform in size, delicious flavour, and very prolific. Certainly the best eropping variety ever raised. We had part of a house of it last year, and it was in our opinion one of the best in cultivation Per pkt., 1s.

CANNELLS' NEW POTATOES.

EARLY VARIETY.

Eynsford Mammoth (Cannells')—Being aware of the wonderful perfection the Potato has reached, it seems hopeless to expect anything better or superior to those we already possess; bowever, it has been our good fortune, after several years of scientific crossing and re-crossing, to obtain a hetter variety—a seedling, which we have named as above, Eynsford Mammoth. It has four most essential and important points for a variety to become a general favorrite and largely grown, viz.:—1st, dwarf haulm; 2nd, disease resisting; 3rd, a tremendous cropper; and 4th, good cooking and table qualities.

At a dinner held by the Eyusford Horticultural Society two years since, each member brought a dish of different varieties in a boiled condition to be tested and tasted, this kind being in competition also, and although some 36 varieties were staged, including many of the newest and hest old leading sorts, Eynsford Mammoth came off victorious by two points. Per 7 lbs., 3s. 6d.; per 14 lbs., 6s.

LATE MAIN CROP VARIETY.

Our Boy (Cannells')—This variety is also a seedling of our own raising, and somewhat resembling Eynsford Mammoth, only it is a later variety, of a more perfect form, very shallow eyes, and of medium size; a heavy cropper, and decidedly a disease-resisting variety. Its cooking qualities are all that can be desired, and good for a main crop. Our sole aim in crossing and re-selecting is to produce varieties possessing the best cooking and exhibition points combined, and in this Our Boy, we are of opinion, has a grand future before it, good in all points that constitute a Potato the public requires. Per 7 lbs., 3s.; 14 lbs., 5s.

POTATOES.

Bedfordshire Hero—The necded Kidney—a very fine large white main-crop Kidney very productive, of good quality. The first prize for the best white Kidney Potato in the Market Gardeners' Class at the Sandy—w in 1890 was awarded for this variety, and again awarded first prize in 1891 Per peck, 3s.

Boston Q.Q. (Quantity and Quality)—A second early handsome white round variety of Regent type; heavy cropper, tubers of large even size skin finely netted, shallow eyes, perfect balls of flour when cooked. Haulm medium height; a grand variety to succeed the first early Kidneys. Per lb. 1s.; 7 lhs., for 6s.; 14 lbs., 10s. 6d.

Canon-Dwarf handm. heavy cropper, good for exhibition, white Kidney; an improvement on Chancellor. Per peck, 3s. 6d.

Early Laxton-The earliest, best, and most prolific early Potato. The only Potato which received a First Class Certificate from the Royal Hostavlivral Society in 1891, and in addition the highest awards in the Chiswick Trials, 1891, and again in 1892 for earliness, quality, and fertility. This early short baulined variety was ruised from the White Beauty of Hebron crossed with Myntt's Prolific Ashleaf. The habit is dwarf, and the shape of the tubers is termediate between the parents; the flesh firm, yet floury, partaking more of the Myatt's flavour than Sharpe's Victor, which it precedes in ripening. Farly Laxton has a very short top, but produces in advance of all other varieties an enormous quantity of good, large, even-sized tubers which lift well together, rendering it the most useful early sort produced, both for the garden, border, frame, or early market work. Per peck, 4s. 6d.

Jeanie Deans-Resembling in form the Victoria, a forward second-early of finest cooking qualities, dry, firm, floury, and of finest flavour disease resisting. Per lb., 1s.

Lady Fife-A beautiful Potato of flattish round form, tubers large but never coarse, cooks white and floury, heavy cropper; a forward secondearly, free from disease. Per peck, 3s.

Lady Frances-A forward second-early, fine round form, few and shallow eyes, good cooking qualities; disease resisting. Per lb., 1s.

Laxton's Perfection. Per peck. 3s. 6d.

Laxton's Reward-A good all-round Potato of excellent quality, a handsome round scedling from Scotch Champion crossed by Magnum Bonum, but having the good quality and more of the characteristics of the Champion, without the deep eyes of that variety; withstands the disease, and will keep and cat well until the following year. This Potato is fast making its way amongst the large number of new varieties which have been recently introduced. Per peck, 3s.

Model-White-round, of good form. Per peck, 4s.

Paul's Round White. - A seedling from Ashleuf, crossed with Schoolmaster. A round Potato, ripening a fortnight earlier than Schoolmaster, slightly more refined in shape, and a far better cooker; a heavy cropper. Received an Award of Merit at Chiswick. Per peck, 3s. 6d.

Prodigious. One of the heaviest cropping varieties, of the highest quality and remarkably free from disease; a heavy oblong white tuber. 7 lbs., 2s. 6d

The General. This new variety is a very prolific, good, disease-resisting, and high quality handsome round potato, raised from the Scotch Champion crossed by the Magnum Bonum. It possesses all the good qualities of both its parents, the haulm being vigorous and woody, but not lanky, enabling the plant to resist the discuse equally with the Magnum Bonum. It is also a great producer, the tubers, which are of the largest size, round sometimes slightly flattened, and with shallow eyes, are very handsome, and produced in immense clusters close round the stem, and although very numerous are even sized and with few chats, and the crop is more easily lifted than that of the Magnum. The colour of the skin and flesh of the tuber is clear white, and the quality excellent, floury, yet firm, and superior to that of either parent.

Laxtons say they loo upon this potato as likely to become a most useful and reliable favourite for main crop, winter, and spring consumption, suitable for field and garden culture, whilst its handsome form renders it one of the best round show potatoes yet produced. Price 1s. per lb.

The Gentleman .- Large kidney shaped, rough skinned, few and shallow eyes; late; a good keeper and cropper, and of superb quality.

Triumph. A main crop, white rough skin, pebble shaped; good cooking kind; very productive. Per 14 lbs., 3s.

Victorious.—First Class Certificate at the Grand National Vegetable Conference at Chiswick, September, 1889, awarded for quality after being cooked and tried. A seedling from the White Skinned Beauty of Hebron crossed with Myatt's Prolific Ashleaf, and combines the fine qualities of both, being in many respects intermediate between these two high quality and nseful sorts. In shape it is a flattish oval, very large and handsome, eyes few and shallow, with a smooth surface, but when fully ripe the skiu is rough; the flesh firm yet flonry, and of a light sulphur tinge, combining the good and nutritious quality of the Ashleaf with the more floury texture and the productiveness of the Beauty of Hebron. As an exhibition potato it is A1, and following the Ashleaf It will be welcomed as a first-rate all round sort for succession both for garden and market culture; hauhu moderate. Per peek, 3s. 6d.

THE GARDEN, 18th November, 1893.

Messrs. H. Cannell & Sons, Swanley, staged 70 dishes of Potatocs, Inving well-known kinds and a few of recent introduction, the best dishes being Edgerote Purple, Peach Blow, The Dean, Our Boy (very large), several seedlings, and Eynsford Manmoth—rather coarse, but stated to be of excellent flavour. (Silver Medal.)

JOURNAL OF HORTICULTURE, 16th November, 1893. Messis. II. Cannell & Sons sent a large collection of Potatoes, clean, well-grown tabers, that deserved the Silver Medal awarded. One specimen of Potato weighed 3} lbs.; 9 in, long.

THE GARDENERS' MAGAZINE, 18th November, 1893.

Messrs. 11. Cannell & Sons, Swanley and Eynsford, sent a large collection of Potatoes, all clean and fine tubers; some 70 dishes.

THE GARDENERS CHRONICLE, 18th November, 1893.

FRUIT AND VEGETABLE COMMITTEE, R.H.S.—The only award made by this Committee was that of a Silver Medal to Mes rs. II. Cannell & Sons, Swanley, for a grand exhibit of Potatoes.

THE CHAMPION VEGETABLE GROWERS' SASH.

On August, the 9th, as early as 3 o'clock a.m., the Eynsford Vegetable Growers were about selecting from each member the 12 best dishes got ready over night for the great contest of the day, and every one gave them great praise for their selection, and the energetic working by which they brought up their productions. Milton-by-Sittingbourne, who ran them disagreeably close the previous year-a real neek-and-neek contest-must have been about even earlier, for they were there in good time, every dish lovely and fresh; and as the time approached the excitement grew higher and more intense, for during the year the Eynsfordians were frequently reminded that the Miltonians would not only take the money, but also the great and valuable trophy they set such value on. Some at Eynsford, it is said, had even bought their seeds from a firm of the supposed greatest repute, and clandestinely intended showing them as eoming from Cannells' seeds on purpose to wiu, had they been fit; but, strange to say, in neither instance did these two worthics even come up to their usual standard, and did comparatively nothing, so it both shows that such seed was actually not so good, and this kind of work deceived them. The seven collections were got to the show grounds. Expectation became much more exciting. The highly-coloured belt was conspicuously displayed on the person of Mr. Wellard, secretary of last year's winning society. Some suggested that was in consequence of the land of its adoption, and others that they anticipated its departure to another region. The various collections were at last arranged, and the qualities of all severely criticised. As they made their appearance, each was compared with its rivals, and the various points of excellence freely commented on. Eynsford and Milton were evidently the contesting parties for the victory. The season was had, and it was most difficult to get good, clean, crisp, vegetables, particularly peas and canliflowers, and those who had these varieties declared they ought to count double points in a senson like last Instantly the judges made their appearance, the tent was cleared and closed; some who were highly concerned walked us hard as they could, others were content to accept their fate as cheerfully as could be expected under the circumstances, but showed unmistakable signs of anxiety. Oue looker-on said the belt

was a crnel instrument; however, it was worn up till the last moment of time arrived, then it was reluctantly and slowly laid on the last year's winner's collection, to be taken up by the next After half an hour's suspense for the verdiet-some declared it painful-at last the decision was posted up, and the Miltonians hailed it with a hearty cheer. Immediately all the principal actors were ushered into the luncheon tent to allay both pain and pleasure. After grace was pronounced, it was delightful to see the sharpness of appetite all round; the early rising, the activity, the lovely pure air of oue of the finest and most beautiful open spaces between some of the noblest specimens of timber, and the scenery of a real old nobleman's park, had the most invigorating effect on both the inner man and the mind that I ever remember to have witnessed; even the weak and ailing all ate and drank most heartly, and in a heat of the sun of above a hundred degrees.

The CHAIRMAN (Mr. Abbott, gardener to Sir William Hart Dyke) rose to propose a hearty vote of thanks to Sir William for lending the park.

Mr. Cannell, in seconding, regretted Sir William's inablity to be present, and hoped there would never be another Home Rule Bill to interfere with the production of mother soil.

The Chairman alluded to the chief object of the day—Mr. Cannell's magnificent prize and belt to the winner of the first prize for the twelve best dishes of vegetables, commenting on their excellence, and regretting that his society, who had been so proud of it during the past year, should now have to yield it up to the superior productions from Milton. The contest was a long, strong, and narrow one. Three points carried in carrots made it absolutely justifiable, as sorry as he, as chairman of the Eynsford Society, was to lose the belt and honour, he knew its justification, and he should lose no time or opportunity of doing his best, and he was quite sure the Eynsfordians would do likewise, to bring it back to its native parish next year. He proposed a hearty vote of thanks to Mr. Cannell for this prize, and also for instituting the belt, as it was a great stimulant to good vegetable growing.

Mr. Cannett, replied, and said he was delighted to see such a sharp and friendly contest. Milton last year, when they only

lost by six points, showed such evidence of being masters of vegetable culture that, much as he regretted losing sight of the belt during the year, he was not at all surprised; and in the absence of Sir William, Mr. Cannell invested Mr. E. Chopping with the magnificent distinction, feeling sure he would preserve it, and deliver it up to the next winner at their show during the ensning year. He hoped this trophy would stimulate them to stronger efforts, and that more pressure would be brought to bear on the members of the various societies, so as to carry the enlivation of vegetables to a higher standard of excellence, and also to more fully appreciate their value for the sustenance of mankind than had yet been practised.

Mr. Chopping assured all present that he felt this a great honour, which the Milton Society had worked and fought hard to gain; assuring the donor it would be highly valued, and next year it should be laid on the Milton collection intact for whoever were then the lucky winners to take it up and wear. (Applause.)

The CHAIRMAN, on again rising, said there was one other very important toast he had to propose: that was "The Health of the Chairman and Secretary of the victorious Milton Society."

This was heartily responded to.

One more toast the Chairman said he must propose: that was "The Non-Successful Competitors and the Visitors."

Mr. Reeves responded on behalf of Foots Cray Society. He said they were defeated, but not disheartened; they had heard much and learnt a good deal, and should return home determined to do whatever lay in their power, not only to get the prize, but the belt also; for nothing, in his mind, was better to see on a

dinner-table than a good supply of vegetables well grown and cooked. (Hear, hear.)

Mr. Cornwall, who replied on behalf of the visitors, said he was the secretary of the Tunbridge Wells Society; he and 50 members of that society had great pleasure in being there that day. They had been to see Mr. Cannell's Nursery and Seed Farm. Surprise had met them at every turn. The exhibition of vegetables in the tent was splendid, and he was quite delighted to see such manifestations of good feeling. His friends already had had a formal meeting outside; they had determined to compete, and, if possible, to carry off that flug next year. (Hear, hear.) He had never seen better feeling displayed amongst those in sharp competition. He hoped soon to see horticultural societies throughout the county have one head centre to arrange the dates of shows, and thought it would be a good thing if all county societies had one head central meeting place; all associations would thus be brought into unison with each other; great good would be sure to rise out of it, such as selecting all the best dishes, and thereby challenging other counties. He wished to thank one and all most cordially, and he hoped at no distant date to see them at Tunbridge Wells, when they would reciprocate their kindness and good feeling. (Lond applause.)

The Champion, fully belted, made a tour through the village, evidently to the intense dismay of the inhabitants, particularly to the wives and families of those who had worked so hard and anticipated so much, of having the boast of the best vegetables in all Kent thus taken away after 10 years of pride and pleasure it was not an easy matter to suppress village feeling.

A DEEP DIGGER.

THE HIGHEST HONOUR & DISTINCTION A GARDENER CAN ATTAIN,

This Prize is expressly for bona fide Gentlemen's Gardeners' Productions, to benefit his Employer, and also showing the perfection of their Garden.

E offer to bona fide Gentlemen's Gardeners a valuable MONEY PRIZE, together with a brilliant STAR OF HONOUR, for the best Collection of Vegetables, Fruit, and Flowers, to be competed for during the coming season. This Order of Decoration is intended to be worn as an incentive to the best productions by accomplished gardeners, and will certainly be valued and appreciated as an heir-loom.

1st 2nd 3rd For the Best Collection of 12 distinct Vegetables.

Prizes, £4 £3 £2 " " " 12 Dishes of Fruit, all distinct.

" " Stand or Box of Cut Flowers. Stand to be 3 ft. by 2 ft.

For further particulars, see Schedule of the Society where the Competition takes place.

H. CANNELL & SONS' CHAMPION SASH.

TO AMATEURS AND COTTAGE GARDENERS' SOCIETIES.

WE also offer a valuable MONEY PRIZE, together with a splendid GOLD-LETTERED SASH, for the Best Collection of 16 distinct Dishes of Vegetables, Fruit, and Flowers.

In neither offer do we bind those competing to purchase from ns, but simply mention as a fact the superiority of our own-grown Kentish Seeds brought us last year 2,000 more orders than the previous one. New customers find them more productive, better crops, and require less quantity than those they have been accustomed to. We rely on our friends' preference to our Firm.

1st 2nd 3rd For the Best Collection of 10 distinct Vegetables.

Prizes, £3 £2 £1 " " " 6 Dishes of Fruit, all distinct.

" " Stand of Flowers. Stand to be 2 ft. by 1\frac{1}{2} ft.

For further particulars, see Schedule of the Society where the Competition takes place.

Our Mr. H. Cannell. Sen., will on the occasion of presenting both Prizes be present, and invite some distinguished personage to invest the fortunate winners with their decorations.

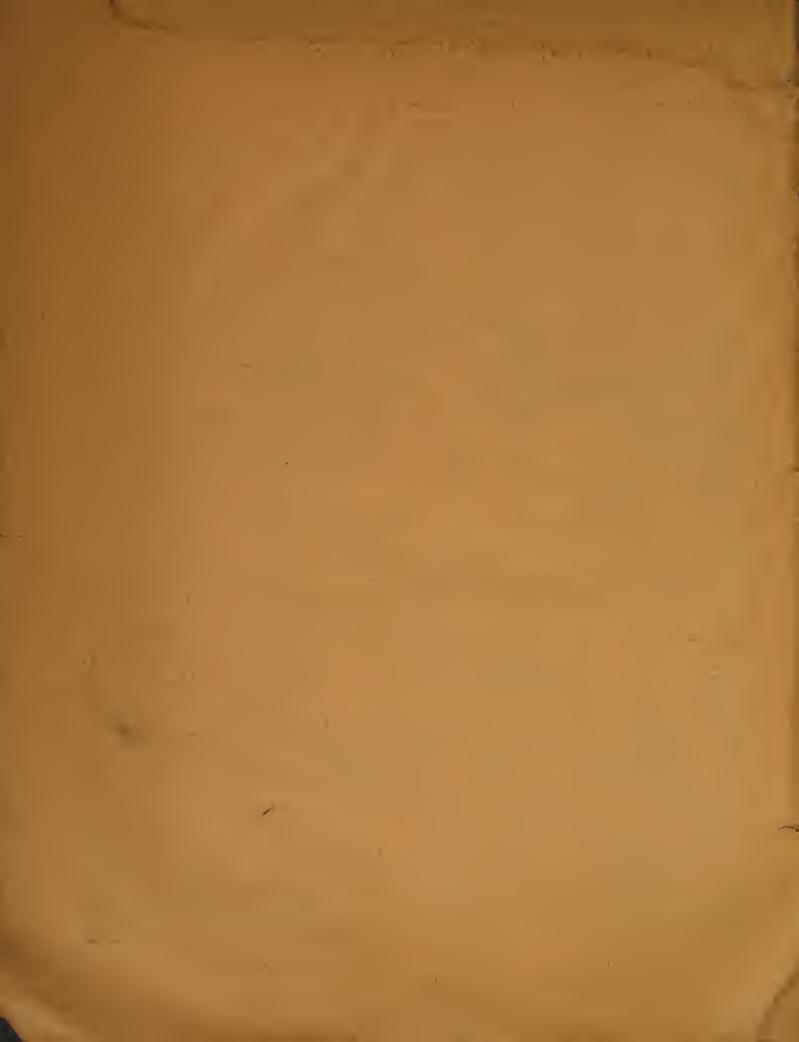

The above Prizes will be offered to one or more Selected Horticultural Societies in each County. The Winner of the Star will not be allowed to compete again, nor to assist others.

This shows the Champion Collection of Vegetables with which the Milton Society (near Sittingbourne) carried off the £3 and the Champion Belt from the Eynsford Society on August 15th, 1893.

H. CANNELL & SONS hope as many Societies in Kent as can possibly make it convenient will compete at Milton for the Championship of 1894.

OUR SUCCESSES IN VEGETABLE GROWING DURING 1893.

SILVER KNIGHTIAN MEDAL FOR A COLLECTION OF VEGETABLES exhibited at the Royal Horticultural Society's Show, held at the Agricultural Hall, September, 1893.

SILVER MEDAL FOR A COLLECTION OF VEGETABLES exhibited at the Gardening and Forestry Exhibition, Earl's Court.

SILVER-GILT MEDAL FOR A COLLECTION OF VEGETABLES exhibited at the Royal Aquarium October Chrysanthemum Show.

SILVER MEDAL FOR A COLLECTION OF POTATOES exhibited at the Royal Horticultural Society.

AT EYNSFORD. VEGETABLES GROWN

The very extensive and interesting collection of vegetables which Messrs. Cannell and Sons set up both at the Drill Hall on the 26th ult. and the following day at Earl's Court deserves more than a passing notice, because vegetables have not hitherto been regarded as a Swanley speciality, and also because there was no pretence to exhibit these products other than as grown under ordinary culture. The Potatoes, Onions, Carrots, Cabbages, Cauliflowers, Tomatoes, &c., were excellent. But it may be pleaded that cultivation is not everything, and that selection of seed stocks is a matter of Cauliflowers, Tomatoes, &c., were excellent. But it may be pleaded that cultivation is not everything, and that selection of seed stocks is a matter of some importance also. That is a scedsman's view which merits all consideration, and it is one on which, not only Messrs. Cannell and Sons, but every other seedsman is entitled to lay full weight. With very few exceptions the Swanley vegetables did not exhibit any attempt to display mere size. Only one lot of Onions were unduly large, but the bulk of the samples served to show what large, firm, enduring bulbs can be got from ordinary enliture if the soil be good and the plants well thiuned early. Yet, whatsoever may be the keeping or non-keeping properties of the giant show ordinary culture if the soil be good and the plants well thiuned early. Yet, whatsoever may be the keeping or non-keeping properties of the giant show Onions, at least all ordinary grown bulbs should keep remarkably well, for seldom have they ripened off earlier or better than this season. The Wroxtons of the Swantey collection averaging 6 ozs. to 7 ozs, were perfect, and better could hardly be conceived. A very interesting dish in the collection was Pea Antocrat; the pods were not large at this season of the year, but very full of Peas literally as green as grass. Its colour is a strong point in its favour, and we like Peas to be green when so called, and not white, as they are so frequently. Not the least value of such a collection of

vegetables as that referred to is found in its reliability. The constant exhibition of varieties or kinds that bave been produced under high-class conditions of culture naturally misleads, and the on-looker as naturally observes. "I can never obtain samples like these in my garden;" but when observes. "I can never obtain samples like these in my garden;" but when he turns to a collection of ordinarily grown vegetables, he recognises at once their natural characteristics, and is satisfied. I am not at all for assuming that ordinary culture signifies poor or inferior culture. That is not so. By ordinary culture I mean cropping under such conditions as that samples most suitable for domestic use may be obtained in the greatest abundance and with appreciable profit. The whole of the Messrs, Cannell's collection was grown on the Eynsford farm literally under field culture, and under conditions less favourable, especially during the recent dry season, than are found in ordinary gardens. That fact renders the exhibit all the more meritorious, because if good vegetables can be so produced, it should be easy for anyone else to have good samples. I have been much surprised to find generally how wonderfully good vegetables have been out in the open or field allotments. That is if a reliable seed stock is procured. There is a good deal of rivalry in these days amongst seedsmen and growers to get the best, and immense pains are taken to have them. That is good praetice, and the gardening public get the benefit of it. No firm has a monopoly in this respect, and if I find one gardener believes in one seed house, another has implicit faith in a second, so that it is evident all are now putting into commerce high-class' stocks. commerce high-class'stocks.

GARDEN, September 30th, 1893.—Royal Horticultural Society's Committee Meeting.

Messrs. II. Cannell & Sons. Swanley, occupied a large space, showing a collection of Apples and a large varied collection of Vegetables. The best dishes of Apples were Colonel Vaughan, Scarlet Nonpareil, Cox's Orange Pippin, Queen Caroline, Emperor Alexander, King of the Pippins, and some Seedlings. The Vegetables comprised a basket of Anglo-Spanish Onions of great weight, some excellent Somerset Hero, Ailsa Craig. and Improved Wroxton Ouions grown naturally; 50 dishes of Potatoes, the best being Cannells' Victory, Satisfaction, Chancellor, and some enormous tubers of Eynsford Mammoth; some good Ladybird and Criterion Tomatoes, Autocrat and Colossus Peas, &c., Silver Knightian Medal being awarded.

GARDEN, September 30th, 1893.—Earl's Court Fruit and Vegetable Show. Messrs. Cannell & Sous, Swanley, were awarded a Silver Medal for Fruit and Vegetables.

Messrs. Cannell & Sous, Swanley, were awarded a Silver Medal for Fruit and Vegetables.

GARDENERS' MAGAZINE, September 30th, 1893.—Royal Horticultural Society's Committee Meeting.

Messrs. II. Cannell & Sons, Swanley and Eyusford, exhibited a large collection of Apples, which showed how well-suited their nurscries at Eynsford are for this fruit. The examples were throughout above the average in size and very highly coloured. Even more noteworthy were their collection of Potatoes and miscellaneous Vegetables, for they were alike remarkable for their high quality, the cultural skill that had been brought to bear upon them, and the taste with which they were arranged. Conspicuous among the Potatoes were Eynsford Mammoth, a large kidney variety, dwarf in growth, a heavy eropper, and of excellent quality; Field Marshal, a red kidney, much brighter in colour than others of its class; good cropper. Altogether the collection did much credit to the firm, and added materially to the attractions of the meeting (Silver Knightian Medal).

EARL'S COURT FREIT AND VEGETABLE SHOW.—Messrs. II. Cannell & Sons had an excellent collection of Vegetables and Fruit, a Silver Medal being awarded. Medal being awarded.

Measured Gardeners' Magazine, October 14th, 1893.—National Chrysanthemum Society.

Messrs. II. Cannell & Sons had an interesting collection of Potatoes, Onions, Carrots, Marrows, Turnips, Leeks, Beans, Mushrooms, and Artichokes, &c., the result of good full culture, and also a collection of Apples and Pears. Silver-Gilt Medal was awarded.

JOURNAL OF HORTICULTURE, Royal Aquarium, October 12th. 1893.

Messrs, H. Cannell & Sons, Swanley, staged a collection of Apples and a splendid collection of Vegetables. A Silver-Gilt Medal awarded.

THE GARDENING WORLD.—National Curysanthemum Society, October 14th, 1893.

Messrs. H. Cannell & Sons had a large and instructive collection of Potatoes of wonderful size—Onions, Brussels Sprouts, Cauliflowers, and other vegetables—as well as a collection of Apples. A Silver-Gilt Medal awarded.

GLOSSARY OR EXPLANATION OF THE BACK OF COVER OF OUR CATALOGUE.

1. First, on the top is our name. From the flattering expressions of joy and satisfaction received from the numerons visitors to our Nnrseries (many from the most remote and distant parts of the world) for what we have sent them for many years, we have good evidence that our name and reputation stands high in the estimation of people, and our yearly increase besides proves it is so; and if we venture to take advantage of personal expressious as those undermentioued, which is of course gratifying to hear, that must be our excuse for repeating them.
"Mr. Cannell, you make my garden and house like dear old England."

"Mr. Cannell, you are in reality the world's comforter."
"Mr. Cannell, I lost a lot of money and vexation in getting seeds and

plants until I heard of your firm."
"I don't mind going hack to Australia now that I know I shall he able to get all I want from you and receive your catalogue."

Such are the expressions often beard.

2. F.R.H.S., *H.M.C.A.B., M.S.A. H. CANNELL, Scn., has been for many years one of the most active Two Guinea Fellows of the Royal Horticultural Society-many years acting on committee. Here we have Horticultural Society—many years acting on committee. Here we have every opportunity of seeing, examining, and discussing with the best authorities all the new and rare plants, fruits, vegetables, and appliances from all parts of the world immediately they are exhibited.

*H.M.C.A.B. (Honorary Member of the Cercle d'Arborieulture of Belgium).—This honour was conferred after the Society visited this country in 1883, making our establishment their first great sight.

3. He is also a Two Guinea Member of the Society of Arts, where all designing instruments and repeat of the highest scientific information.

all designing, instruments, and papers of the highest scientific information are read and discussed before the most learned men in the world, which gives as splendid opportunities on most valuable questions of the day, especially that alluding to horticulture.

4. We might also mention our name is eutered in the record of valuable inventions and discoveries at the British Museum, as having introduced the system of top heating, which has proved the highest

advantage to mankind.

5. Golden Seeds.—The great success of having grown all sorts of seeds in the warmest and most sunny spot and hest adapted soil in Eugland, has proved an immense advantage to the entire world; and this invaluable discovery has already, and will more and more as years roll on, become of the highest possible importance. Seeds that we used to think could only be grown good in foreign parts, we now put them to the severest test when placed side hy side with our "Perfect Seeds," so much so that, as large

as our plant orders are, our seed orders, by force of real quality, are the largest now.

6. Rising Sun.-This indicates that we are favoured with more sun, and, of course, heat and light, that gives riches and life, which is necessary and, of course, near and light, that gives riches and the, which is necessary for all crops—thus seeds of the highest colour and plumpness; and further, they not only possess a golden gloss, which indicates the highest quality, but they afterwards bring gold to the sower, and afterwards a large order—hence the Golden Seeds.

7. "Perfect Seeds" is also our registered trade mark, the force and the company testimorials an large our own grown seeds. Seeding

weight of so many testimonials eulogising our own grown seeds. Sending them direct from our fields to the sower at a cheap rate, and of a superior them direct from our fields to the sower at a cheap rate, and of a superior quality, forced us, as it were, to protect this, what was formerly thought almost an impossible title; but the many thousands of proofs have more than justified this assertion, for many have said that our seeds have proved it by their magnificent results all over the world.

8. Our first trade mark, "Forget-me-not," will be found on one side. This has brought smiles and pleasure to many hundreds of lovers, and the degree friends have englosed it when corresponding, to show its value

dearest friends have euclosed it, when corresponding to show its value. We have been offered £100 for its nse, and, of course, refused with thanks. We have no doubt young people will long continue to use it, and may it

bring them much joy.

9. The Spade—nil desperandum.—Call a spade a spade and dig deeply wish to do with it, not only into the soil, but the same with everything you wish to do well in the garden, aud, above all, never despair.

Just recently Mr. HENRY CANNELL, the head of the well-known Swanley firm, has been awarded a Gold Medal and the First-Class Diploma of the Academy of Art and Science, Brussels, in recognition of his services to horticulture. Mr. Cannell has also heen made an honorary member of the institution.

VERY NECESSARY YOU SHOULD SEE UR ASTER

give an idea of the extent of our seed growing—particularly Asters—which do so wonderfully well, yielding seed equal to what is usually supplied from the Continent, and which we guarantee to give more than satisfaction. We have hundreds of testimonials praising our Asters. The last three years all, or nearly all, the seeds are of our own growing. The following report will go far to prove our assertions as being correct:-

Reprinted from the GARDENERS' CHRONICLE.

OUR SEED FARM.

AZING with a somewhat dreamy air at a few Asters in pots, sent np from Chiswick to the James Street Drill Hall the other day, Mr. H. Cannell sententiously remarked that he had a grand lot just then in bloom at Eynsford, and invited me to go and see them. The invitation was too tempting to be declined, and accordingly a few days later I found myself with my energetic host standing out on the side of the hill which slopes southwards to the Eynsford valley, looking npon what can be truly described the finest shows of Asters I have seen. As under the force of the prevalent strong wind, the rich masses of coloured flowers surged to and fro, sometimes in broad sunlight, sometimes in shade, it was not of Pacony-flowered, of Panpon, of Emperor, and other sections, in mixed colours, and very beautiful they are, because of the hizarre colouring found in some twelve or fifteen diverse form a propriet of the interest page to a propriet of special interest. some twelve or fifteen diverse forms or markings thus interspersed; still further, the mixtures are of special interest, because these include some lines or markings not found in the selected colours, and thus furnish the ground-work of further selections of special merit. Still, the best effects are found in flowered, seemed, at the time of my inspection, to be the most brilliant, because the most fully in bloom; and some of the colours were indeed glorious nnder the sunlight—so telling, in fact, as to almost heggar description. Although growing, as it were, under field enline, and out on the exposed hreezy hillside, yet the flowers are in all cases of splendid quality. I have never seen better under ordinary culture, or plants more

Mr. Cannell is growing these Asters for seed production, and without doubt he starts in the production of home-raised seed with very fine strains, the flowers being as perfectly double as well as they can be. - A. D.

(3)

Short Notes and Information for our Customers.

FREE CARRIAGE OF SEEDS.—We send all Vegetable and Flower Seeds carriage paid to any place in the United Kingdom, excepting Peas and Beans, Potatoes and Artichokes, when any or all of these are ordered in small quantities, as in many such cases the carriage nearly, if not quite, absorbs the value of the goods.

Potatoes and sundries, &c., are only sent free if the value amounts to 20s. and upwards, unless forming part of a general seed order, when we send the whole carriage paid.

EMPTY PACKAGES.—We charge at cost price, and allow half price if returned in good condition and carriage paid, and must be in all cases accompanied with sender's name and address and advised by post.

Although every care will be taken in the packing and sending of plants, seeds, &c., risk of every description must be borne by the purchaser immediately they are delivered to the Railway Company or Postal Authorities.

Every article is charged at the very lowest price. Our object is to give the ready-money buyers the advantages they are really entitled to. It may happen that prices lower than ours may sometimes be quoted. This invariably means false economy in a variety of ways—good things must be looked after by good men, who must be fairly paid, and good strains are only procured by nuceasing labour and care.

Full instructions as to the proper mode of forwarding must accompany each order, as it is calculated to expedite transit of goods, and save vexatious mistakes. All goods are advised the same day as forwarded, and the invoice posted as soon as possible afterwards.

Say by what rail. Please to write the address plain and in full on each order. No complaints entertained unless made immediately on receipt of goods.

The greatest care is exercised, and utmost liberality shown, when the selection of sorts is left to us.

It is particularly requested that all small orders under 5s. be accompanied with remittance, to avoid the necessity of Booking, often the trouble of rendering and even re-rendering several times to our loss.

All orders by post will be dealt with precisely as if given personally. Those who send above their value will have additional put in to make up the full amount.

We have every facility for keeping a large stock of everything enumerated in this Catalogue, and are therefore determined to adopt the system of quick sale and ready money. All who enclose remittances will be most liberally dealt with.

Our establishments are open for business, &c., from 6 o'clock a.m. until 6 p.m., and 5 o'clock p.m. on Saturday. No visitors admitted on Saturday evenings and Sundays. Closed on all Bank Holidays.

Customers are particularly requested, when sending orders for friends (with their own), to do so on separate papers, with each address written plainly, to prevent mistakes.

WHEN SPECIAL QUOTATIONS ARE GIVEN, CUSTOMERS ARE KINDLY REQUESTED TO MENTION SUCH.

To avoid delay and disappointment, all business communications must be sent direct to the firm, addressed "H. CANNELL & SONS," otherwise they will remain unnoticed. Telegraphic Address, "CANNELL, SWANLEY."

Post Office Orders to be made payable at Swanley, Kent.

All Cheques to be made payable to H. CANNELL & SONS, and crossed Martin's Bank, Swanley, Kent.

Our Terms of Credit are three months only from date of invoice. As in co-operative societies, we do not demand payment beforehand, unless from unknown correspondents, when satisfactory references to bankers, or some person already known, are equally acceptable. So as to encourage quick returns and but small profits, we allow 5 per cent. discount on all payments made within 14 days of date of invoice, but after that date must be remitted in full. When special prices are quoted, accounts are payable one month from date of invoice and no discount.

We hope all customers will apprise us of change of address, thus saving the annoyance to them of redirection and surcharge by postal officials and loss of double postage to us when returned; a halfpenny card would thus save us a shilling, and often pounds.

NOTICE.—We grow our own Seeds, and every possible pains taken, and the strictest attention is paid to have and supply every item as per Catalogue; but there are so many always anxious to rush into litigation for the sake of compensation for any trifle, and failures which may occur over which we have no control, that we are compelled to issue this notice:—

CANNELL & SONS give no warranty, express or implied, as to description, quality, productiveness, or any other matter, of any Seeds or Bulbs they send out, and they will not be in any way responsible for the Crop. If the purchaser does not accept the goods upon these terms they are to be returned. These conditions will be found in all Seed Catalogues.

THE VALUE OF PERFECT SEEDS.

PON these, the hope, pride, pleasure, and satisfaction of the garden entirely rest during the whole year. We have often seen people admire inferior productions and heen contented, but the moment they see something vastly superior, then comes the great surprise and astonishment that they should have heen so long satisfied with what they have had. There are many thousands standing in this position all over the world. Now, we will ask you how all the gentlemen (see testimonials), who are perfectly unknown to each other, therefore cannot have the slightest interest or feeling beyond stating facts concerning our seeds, for the sole purpose of showing satisfaction they have given, and no doubt the great object they had at heart was to benefit their fellow countrymen. It is now an acknowledged fact by all who have had them that they are the best offered in Europe.

SEEDS SHOULD COME UP STRONG!

is of immense advantage when land is manured and dug not later than January, so that it can be left rough during greater part of the winter season, and thus let the surface get thoroughly frozen through, particularly heavy land; it is astonishing how it erunnbles to pieces, as if it was ashes. The smull seeds come up when sown in it beautifully, in consequence of the soil being so friable; whereas, if the ground is dug later, in all probability there is not sufficient frost to pulverise the lumps. The strongest seedlings cannot have much strength, and more often than not are covered over as it were with a flag-stone; so they are crippled, and often die in their attempt to reach the daylight. If seeds are old and have lost greater part of their vigour, the crop must be a failure, and those that struggle through and survive can only be compared to a poor sickly crippled child, requiring extra attention, and must be judiciously supplied with plenty of good food or they will never grow up, and even then far from satisfactory—how can they? Think over the matter: nature does a lot, but man must use common sense to be successful. As a rule, seeds should be covered with soil about double their depth (excepting Begonia and other very minute seeds). It must also be romembered that all seeds should be kept at one regular state of moisture even after they have germinated, so as to allow the young radicals or roots to attain sufficient length, and thus have power to gather up moisture and sustenance to supply the plant; for the better this is attended to, so will the plant do accordingly. Good heavy well-developed seeds are a great secret in seening a thoroughly satisfactory crop.

PLEASE KEEP YOUR EYES ON THIS BOOK FOR REFERENCE AND INFORMATION WHEN ORDERING EVERYTHING FOR THE GARDEN.

OUR FOREIGN TRADE.

E have so perfected the system of sending plants and seeds into the most remote parts of the world that success is no longer an uncertainty, which the testimonials confirm.

H. CANNELL & SONS, F.R.H.S., M.S.A.,

Importers and Exporters of all New and Choice Plants, Florists' Flowers and Seeds, to and from all parts of the World.

FOREIGN AND COLONIAL NOTICES.

Plants and Sceds are despatched to India through the Indian Pareel Post, and also by the Ordinary Mail. Customers will kindly notify by which service they wish their parcels sent.

In America, Australia, India, and Cape Town, the general expression amongst both the trade and amateurs is—" None are so successful in exporting plants as Cannell & Sons;" consequently, we need hardly say our trade has increased to a very great extent.

When Soft-wooded Plants are received abroad, if dry, let them lie in milk-warm water for half an hour, without removing the packing from the roots; then unpack and put in pots, according to size, and if convenient put in a glass case, being careful to shade from the sun until they make fresh growth.

All orders must be fully prepaid.

Telegraphic Address: "CANNELL, ENGLAND."

Those of our esteemed Patrons who have proved the value of our Collections of "Perfect Seeds, we respectfully request to acquaint their Friends of our Firm.

PEAS.

(Pisum Sativum.) LEGUMINOSÆ.

CULTURE.—Trenching or deep digging is highly necessary for Peas, in fact, all vegetable culture; even this is nearly always done as unwisely as ean be. Take all the top good soil off and throw in on the second trench, keepiag the top on the top, and then thoroughly break up the lower spit (adding plenty of manure), which is generally very inferior, another foot: this done, the ground is then of donble value—ia fact, every inch of soil should be done thus, and then our crops would be for ever considerably more productive. The ground should be well pulverised and enriched with good manure, burnt rubbish, and lime. The earliest varieties may be sown about the second or third week in November, or first week in December, another sowing iu January, and continuous sowings in the order they stand, every three weeks, up to the end of July. Sow iu rows four to seven feet apart (according to height, which varies wonderfully): for instance, when about five or six inches above ground, thin out if required, and properly stick. We find boards edgeways along the rows on the windward side capital protection. In a dry summer like 1893, when the Pea season was brought to a premature close, the advantages that may be derived from planting them in trenches were more apparent than usual. On soils of a light and burning nature, this is the only way whereby good crops of this vegetable may be ensured. If the trenches are taken out in the winter time, and the soil laid up ou each side of them, it will sweeten, and when the time comes for sowing, be in a much better condition that diggiag can bring it to. If the refuse from the rubbish heap, mixed with its own hulk of manure, be laid in the hottom of the trenches, the roots will find their way into it, greatly to their henefit, when dry exhaustive weather comes. The difference in the yield of peas grown in this way is great compared to the ordinary method.

The general height is here given of the various kinds of Peas, but, of course, the season and quality of the soil will cause a difference.

SECTION I., or EARLIEST VARIETIES.

Height Per qt.

Cannells' "English Wonder."—In agaia offering this new and valuable first early Pea we have no hesitation in repeating all we said of it last season. It is, without doubt, the finest dwarf wrinkled early Pea, as we think the accompanying unsolicited testimonials and extracts from the various gardening papers will prove. The haulm grows from 1 ft. to 16 ins. high, and is covered with beaatiful enrved dark green pods, produced in pairs, literally packed with 8, 9, and in many cases 10 and 11 peas of first-class flavour when cooked ...

PEA, CANNELLS' " ENGLISH WONDER."

CANNELLS' INVALUABLE NEW EARLY WRINKLED PEA.

CANNELLS' "ENGLISH WONDER." (See page 47.)

Certainly the best Dwarf Early. Testimonials from all the leading Vegetable Growers confirming this.

NEW PEAS OF 1893.

Alderman—The largest and handsomest podded pea; a most prolific and high quality variety. Received XXX, the highest award, from the R.H.S. after trial at Chiswick, 1891; averaging in height 5 feet, producing a few days later than Duke of Albany; very large, handsome, straight, deep green and well-filled pods, of the Ne Plus Ultra flavour and quality, whilst nearly every pod is fit for show. In sealed quarter-pint pkts., 2s. 6d.

Ambassador—Awarded a Certificate of Merit by the R.H.S. A main crop wrinkled pea, growing 5 feet, producing profusely deep green, long-pointed, well-filled pods, the peas retaining their beautiful colour when cooked; of the finest flavour; a great acquisition. In sealed half-pint pkts., 1s. each.

Censor—Awarded Full Marks by the R.H.S. A deep green wrinkled marrow, height 3 feet, producing most profusely large, deep green, well-filled, pointed pods; peas large, and of the most exquisite flavour; fine, robust grower; a most desirable variety. In scaled half-pint pkts., 2s. 6d.

Epicure—Awarded Full Marks by the R.H.S. A green wrinkled marrow, growing 5 feet, producing an abundance of large, deep green pointed pods, containing from 9 to 12 large peas of the highest quality, which retain their beautiful green colour when cooked; a pea of very great merit. In sealed half-pint pkts., 2s.

Essential—Awarded a First-class Certificate by the R.H.S., 1891. A wrinkled (the early) marrow; produces abundantly square, handsome, well-filled, deep green pods, the peas retaining their beautiful deep green colour when cooked; exquisite flavour; a great acquisition. If sown in pots in January, and planted out in March, may be had very early. Height, 5 feet. Per pint, 1s. 6d.

Fame—Awarded a First-class Certificate by the R.H.S., 1891. A main erop wrinkled pea, growing 4 feet, producing profusely deep green, square-ended, well-filled pods; an improved Ne Plus Ultra, coming into use much earlier than the fine old variety of that uame; flavour exquisite. Per pkt., 1s.

Gradus—A large-podded first early wrinkled variety, and is alike good for table and for show; deep green coloured pods and well filled. Awarded a First-Class Certificate at Chiswick after trial. In sealed quarterpint pkts., 2s. 6d.

Heroine—A wrinkled marrow of robust growth; second early, producing most abundantly long-pointed, well-filled pods; flavour exquisite; fine for field culture. Height, $2\frac{1}{2}$ feet. Per pint, 1s. 6d.

Highelere Surprise—A new pea of great excellence, and without doubt the handsomest and finest second early prolific pea yet introduced. It grows from $4\frac{1}{2}$ to 5 feet high, and bears with the greatest profusion long handsome pods, mostly in pairs, each pod containing ten to eleven peas, which, when boiled, are of a dark green colour and excellent flavour. One of its chief qualities is that it produces pods when a foot high, then commences to branch; seed in consequeuee should be sown thinly. Per half-piut pkts., 1s. 6d.

Renown—A green wrinkled marrow of robust growth; a very fine main crop variety, producing abundantly deep green, square, well-filled pods; flavour first-rate. Height, $2\frac{1}{2}$ feet. Per pint, 1s. 6d.

Superabundant—This is a dwarf marrow pea, deep green in colour, an immense cropper; a fine market Pca of the finest quality. Height, $2\frac{1}{2}$ feet. In sealed half-pint pkts., 1s. 6d.

The Digswell—A magnificent new pea, which we can specially recommend for its remarkable productiveness, excellent quality, and delicious flavour. Its habit is very robust, which enables it to resist drought and mildew better than most varieties. The pods are straight, of medium size, and closely filled with very large peas, which, when cooked, are of a beautiful green. Height, 5 feet. Per pint, 2s.

The Don-Awarded a First class Certificate by the R.H.S., under the name of Quality. A wrinkled marrow, producing abundantly deep green, square ended, well-filled pods; Ne Plus Ultra-like Pea, of exquisite flavour, coming into use earlier than Fame. Height, 4 feet. Per pint, 1s. 6d.

The Echo-Awarded a First-class Certificate by the R.H.S., 1891. A most prolific dwarf wrinkled marrow, coming in ten days before Renown; of very superior quality. Height, 2 feet. Per pint, 1s. 6d.

(13)

BROAD BEANS.

(Faba vulgaris.) LEGUMINOSÆ.

CULTURE.—For an early crop, a sowing should be made of Mazagan in October or November on well drained foil. The main crop should be sown in February, and others to follow up to the end of May. Sow in drills, about 2 inches deep, the beans to be 3 inches apart, and the drills 2 to 3 feet apart. The ground dug and well manured. To ensure well-filled pods it is a good plan to pinch off the leading tops as soon as the lower pods begin to set.

	Per quart

Taylor's Broad Windsor-Large, and fine flavour		1	6
·			

RUNNER OR CLIMBING BEANS.

(Phaseolus multiflorus.) LEGUMINOSÆ.

CULTURE.—It is a common mistake to plant these too early. Sowings may be made in April, under glass, and the plants put out about the middle of May where they are to stand. If, however, they are to be sown in the open ground, do not put them in until the first week in May and again in June and July. This is the vegetable for a hot and dry season. When thickly mulebed and watered they will bear heavily, and deserve all the labour of watering afforded them. They should be occasionally topped, to induce side growth, and if possible stakes or supports of some kind should be used as it allows of much finer growth and increased production of pods. Per quart .-

tender; a heavy eropper
Cannells' Ne Plus Ultra—The best for exhibition and main erop, producing an enormous quantity of extraordinary pods of splendid form, from 10 to 14 inches long, and quite straight. To grow it to perfection each bean should be planted 1½ feet apart in the rows
Cannells' White Czar—Is an enormous podded white runner Bean, the pods of which run from 12 to 16 inches in length, are very thick, fleshy, and almost stringless, often 2 inches in diameter, and produced in clusters. It is also somewhat earlier and hardier than the Searlet Runner. The tendeucy of the Czar is to form thick fleshy pods and few seeds, and no other Bean approximates this for size, quality, and productiveness, and although the pods reach an immense size, the flavour is extremely delicate
Champion-A select stock of the old Scarlet Rnnner
Giant White-A wonderful cropper, long pods, which are very tender; a capital exhibition variety
Painted Lady-Very handsome, searlet and white flowers; very ornamental as well as useful
"Titan"—The A1 Searlet Runner. Raised from a very fine selection of the White Czar crossed with the Girtford Giant. Titan is a great advance on both its parents. The enormous yet handsome broad and straight pods, produced in clusters, are quite as large as those of the Czar, but straighter; very fleshy, and almost stringless up to maturity, and when cooked are of great delicaey. No other Scarlet Runner Bean approaches this in size, appearance, and productiveness. Easily gathered, and the growth being rapid, the pods may be eaten of considerable size, the fleshy portion largely predominating even in full-sized pods; the great breadth of the pod also renders them better adapted for slicing. Titan is also a very hardy Bean, and the seed, which is very large, ripens earlier than that of the

Czar, rendering this new variety not only the finest but the most useful and profitable to grow either for table or market, while for exhibition purposes it is unequalled ... per pkt. 2 0

HARLINGTON WINDSOR BEAN.

G. C. Asulin, Esq., St. George's, Killiney.

The produce of your seeds was very successful at the flower shows, baving gained three first and two second prizes.

Mr. W. Lock, Rocklands, Ross, February 13th, 1893.

I must tell you that the cottagers for whom I got the seed were delighted with the quantity and quality for the price.

for table or market, while for exhibition purposes it is unequalled

CAPNELLS' SCAPLET RUNNER NEAN

FRENCH, or DWARF KIDNEY BEANS.

(Phaseolus nanus.) LEGUMINOSÆ.

CULTURE.—These are a great acquisition where it is inconvenient to grow Runners, as they occupy little ground and bear delicious and tender pods. Sow in boxes or pots in a frame, for planting out after being carefully hardened off at the end of May, and again, in the open ground, in May and June, and for late crops up to the end of July. The same applies to these as the Runners respecting mulching and watering, especially that excellent and well-known variety, Canadian Wonder. It is not an exaggeration to say that by this means double the produce is obtained.

Per quart .- s. d. Cutbush's Giant-Said to produce the largest pod and heaviest crop of all; should be grown in every garden. It requires plenty of room, being a strong grower per pint 2s. Cannells' Canadian Wonder-This is without doubt the best of the Dwarf Beans, producing pods from 9 to 12 inches in length, which, when boiled, are very tender Cannells' Ne Plus Ultra-A distinct variety, dwarf habit, carly, and delicate flavour; very productive indoorsand out; valuable for forcing Chinese, or Robin's Egg-A very productive and free eropper ... Fulmer's Early Forcing-Large, and a good bearer Negro Long Pod-Very fine eropper Osborn's Forcing - A very dwarf quick-growing variety, well adapted for early sowing Pale Dun, or Cream Coloured-A good early variety Sion House-Fine for forcing ...

WAX POD, or GOLDEN BUTTER BEANS.

CANNELLS' CANADIAN WONDER BEAN.

NEGRO LONG POD UEAN.

Mr. W. A. Cook, Compton Bassett Gardens, Calne, Wilts.

I am appointed judge at several shows, and I am so struck with the perfection of the following:—Cannells' Best of All Beet, Perfection Tomato, Perfection Carrot, Giant Cos Lettuce, and English Wonder Pea that I wish you would send cards to place on them. Your English Wonder Pea is by far the best early wrinkled pea in cultivation. My foreman of the kitchen garden says it is the fluest pea for all purposes.

G. P. Shaw, Esq., 148, Beresford Street, Camberwell, S.E. Your seeds last season were excellent.

ARTICHOKE (Globe).

(Cynara Scolymus.) Composita.

CULTURE.—Sow in March or April in drills. 18 inches apart, and transplant 3 feet apart each way. The first season they will only produce a partial crop; but as it is a perennial, after being once planted, the beds continue to bear for several years. It is the practice of some to sow annually in March so as to keep two beds in use, digging up the oldest plot at the end of the second or third year. So as to secure fine heads they require good treatment; the soil should be rich, deep, and moist, and protected in winter by placing straw, bracken, or other dry material closely round the stems. The heads of these are very delicious when boiled and served with butter and salt.

Per oz.—s. d.

Large Green Globe. The best 0 10
Large Purple Globe. Very useful 1 0
Jerusalem Artichoke (Helianthus Tuberosus), not being produced from seed, Roots are offered on page 44.

For plants, see page 44.

ASPARAGUS.

(Asparagus officinalis.) LILIACEÆ.

CONNOVER'S COLOSSAL ASPARAOUS.

CULTURE. — There is no vegetable more delicions, and certainly none more strengthening and renovating to the whole human system, more particularly to the kidneys, than Asparagus. Considering its easy culture, and coming in at a time between the winter greens and green peas, it is remarkable that it is not prized and valued almost equal to a well furnished drawing-room. Choose the highest and lightest ground in the kitchen garden, and stake out in September as per diagram, dig out to a foot deep, lay it on each side in the pathway, then wheel in three inches of good

strong manure, fork this in about another foot, and if dag over deeply two or three times so much the better; on the top of this place a fair coating of well-rotted manare, and over this three inches of soil from out of the alley, then place one plant to every nine inches, spreading the roots well out, covering them over with the finest soil, free from stones, for the top covering have six inches of light friable or even sandy soil. The first year make one eatting only, if the plants are three years old, the following winter add more fine soil, so that there is something like nine inches of earth above the crown of the plants. of the plants. Asparagus beds made in this way with a good coating of manure every other year cannot fail to give abundance of this succulent vegetable until the peas make their appearance. A coating of our Real Maurre gives increased strength, and should be applied, 2 ozs. to the yard, every season, showery weather being selected for the operation.

We have heard of beds being in good condition when fifty years old,

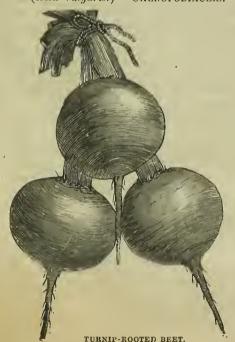

but it stands to reason that the vigour of the plants must be impaired. New heds should be planted every year, so that sufficient strong plants can be taken up, put closely into a gentle hot-bed and torced; this method would give a fine supply for the table daring February, and thus prolong the season for this welcome vegetable.

BEET

(Beta vulgaris.) CHENOPODIACEÆ.

BEET, CANNELLS' BEST OF ALL

CULTURE. - Sow the middle of April on ground that has been deeply dag and well manured the previous year. At the time of sowing the ground should be again deeply dug, and the seeds sown in rows a foot apart. It may be sown in drills drawn by a hoe, or by dibbling a few seeds in holes an inch deep and a foot apart in the rows; thin out, when the plants are about 2 inches high, to a foot apart where in dills, and where dibbled in holes draw out all except one. When lifting the roots, in October or November, great care must be taken not to bruise them or cut off any small shoots or outgrowths or the colouring will be gone. About the end of October or beginning of November store them in an open shed in dry sand; they will then keep in good condition, and can be used when required.

CANNELLS' BEST OF ALL.

Medium-sized root of a beautiful rich deep blood colour, fine shape. and clean growing. Sure to please for cultivary purposes, and its handsome dark metallic glossy crimson leaves render it a very effective variety for the flower gardeu. 6d. and 1s. per packet, 1s. 6d. per oz.

(13)

BRUSSELS SPROUTS

(Brassica oleracea Bullata gemmifera.) CRUCIFERA.

No part is perhaps so noted for good Brussels Sprouts as Swanley. Seed is sown directly after the first rain in Angust. These are planted out in well-manured ground, just at the exact time when seed is generally sown in March. From these early sprouts high prices are realised, and after these come the spring sown, thus the season is prolonged from September up to March.

culture.—Sow the seed between the beginning of March and end of April—the earlier the better—in drills, on a well prepared bed, and cover thinly with fine soil. When the plants are 2 or 3 inches high, draw out the strongest and transplant into another hed, 6 inches apart. In May or June they are to remain 2 feet apart in the rows and 1½ feet between the plants in the rows. Ground should be prepared early, so as to allow the soil to become firm.

CABBAGE.

(Brussica oleracea capitata.) CRUCIFERA.

CULTURE.—Little need be said respecting the cultivation of this popular vegetable. A good supply of young and tender cabbages through the winter is certainly worth some little labour to obtain. There is nothing in the way of winter greens that can approach good cabbages in delicacy of flavour, and those who have never made a practice of growing them ought to do so. No better preparation of ground with a coat of manure can be made than in the lifting of early potatoes, when such a piece of ground may be profitably utilised by them. Sow in March and April for Autumn and Winter use, and early in August for Spring and Summer cutting.

CANNELLS' DEFIANCE CABBAOE.

The small early kinds do well plauted in rows 18 inches apart and 15 inches between the rows, the larger growing kinds require to be put 2 feet apart each way.

CABBAGE, SAVOY

(Brassica
oleracea
ballata mojor.)
CRUCIFERÆ.

CULTURE.

Treat the same as for Cabbage.

Cannells' Green Curled Savoy.

Per oz.—s. d.

Cannells' Drumhead—Grows to a large size,
very sweet and tender after frost 0 %

Early Dwarf Ulm—Very early and compact;
may be planted closer than some sorts 0 %

Green Curled—Suitable for the main crop ... 0 %

Marcelin—Strongly recommended 0 %

Tom Thumb—A very small kind, does not grow
much larger than the Drumhead Lettuce ... 0 8

CAPSICUM

(Capsicum annuum).

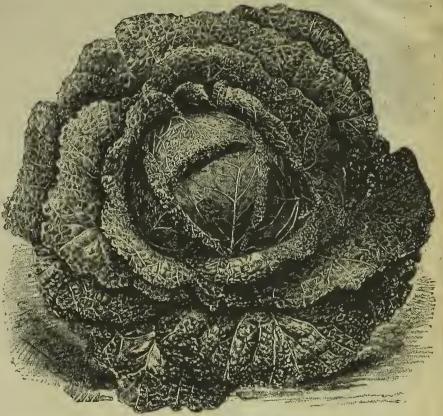

USE.—The pods are used for pickling, and when ripe ground to make Cayeune pepper.

CULTURE.—Sow in the end of March or the beginning of April in pans, and place in a hot-bed. When the plants are in seed leaf, thin to 4 inches apart; those drawn out may again be transplanted into pots or paus. Contiune them in the hot-bed, and give air freely. In May harden them off by gradually exposing to the open air. Early in June transplant, where they are to remuin. in a sheltered position, under a south wall.

Child's Celestlal Pepper—The plant begins to set its peppers carly in the season, branching freely, and bearing profusely. The fruit, up to the time they are fully grown are of a delicate ereamy-yellow colour, and when fully grown change to an intense vivid scarlet, making a plant when loaded with fruit, part of one colour and part of the other, an object of the most striking beauty and oddity. The peppers are from two to three inches long, of clear, sharp flavour, and superior for any of the uses to which a pepper can be put ... per packe

Pepper, Elephant's Trunk (capsicum annuum proboscideum)—New variety, distinguishing itself by its unusually
long, glossy scarlet fruits of 8 to 11 inches in length by 2 to
2\frac{1}{2} inches in breadth, resembling in shape the trunk of un
elephant. Flavour mild, and valuable for use in the
green state per packet 1

Ruby King—Plants are very sturdy in habit, and each produces from 6 to 12 large handsome fruits, which, when ripe, are of a heautiful bright ruby-red colour; remarkably mild and pleasaut to the taste per packet

Per oz.

CANNELLS LONG RED SURREY CARROT

EARLY SCARLET HORN CARROT.

CANNELLS' ALTRINOHAM CARROT.

CANNELLS' PERFECTION INTERMEDIATE.

CARROT.

(Daucus carota.) Umbellifera.

CULTURE.—The French Scarlet may be sown in frames in December and January; in February, succession sowings may be made on warm horders; in March, a large sowing may be made; and for general crop sow about the middle of April, either broadcast on heds or in drills. Preference should be given to the drills, as the crop can then more easily be kept clean. As soon as the plants are 2 or 3 inches high, thin out to 2 or 3 inches apart at the first thinning; after a few weeks give a final thinning to 6 or 8 inches distance, and the crop allowed to remain till it has perfected its growth in Antunna. It will be found an advantage to mix the seed with a certain amount of soil so that it can be more evenly distributed.

CANNELLS' PERFECTION INTERMEDIATE.

CANNELLS' SELECTED GUERANDE CARROT.

CARDOON.

(Cynara Cardunculus.) Composita.

CULTURE. Sow in April, and grow in trenches in the same way as elery.

Large Spanish, cultivated for the mid rib of the leaves, hlanched like Celery; used for soups, stewing, and snlads 1 0

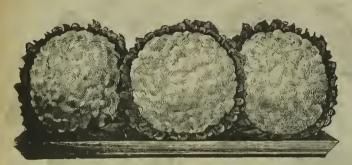

CAULIFLOWER.

(Brassica oleracea botrytis Cauliflora.) CRUCIFERÆ.

CULTURE. — Sow end of January or early in February in a frame on a slight beat, or in a house, so that the plants may be forwarded and hardened off by April, when a sowing may be made outdoors. From this sowing heads will be produced in July and August. To stand the winter, seeds should be sown about the third week in August. The Early London and Early Dwarf Erfort are both reliable sorts. Select a sunny, well-drained spot for the seed bed, well work, and if at ull heavy add a good dressing of fine sandy soil or old potting compost, after which the seed may be sown thinly and hroadcast, and covered with fine soil. When the seedlings appear, apply an occasional dusting of soot and lime as a preventive against slngs. The strongest plants, when ready, should he dibbled out rather thickly in hand-lights and cold frames, and the remainder left in the seed hed, where they will frequently survive an ordinary winter. Finally, plant out in spring.

WALCHEREN CAULIFLOWER.

Eclipse—Is a favourite in every garden where it has been cultivated. The numerous testimonals received are proof that it has taken a place second to noae, either for private gardens or market purp; ses, the quality, flavour, and size being unequalled. By successional sowings it can be had from August to Christmas. Per packet, 1s.

Autumn Giant—Perfectly distinct from any other sort. The heads are beautifully white, firm, and compact, and being thoroughly protected by the leaves, remain longer fit for use than any other kind.

Per pkt. 6d. and 1s 0d.; per oz, 2s. 0d.

AUTUMN GIANT CAULIFLOWER

CELERY.

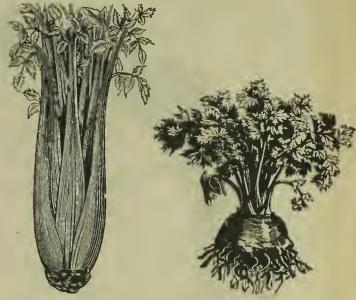

(Apium graveolens.) Umbellifera.

CULTURE.—In February sow in heat; March and April in opeu border. Plant in April. May, and July, from 2 feet 9 inches to 3 feet between the trenches. Well maaure the bottom of the trenches with rotten dung from au old hot-hed, and well water in dry weather. However large Celery may be, it is of little value if disfigured hy the ravages of garden pests. It is of the utmost importance that soot, burnt ashes or even fine soil is hanked closely round the stems, too much soot cannot hardly be used, both to keep away the eelery-fly that works its way in and deposits its eggs between the two skins of the leaves, and also to keep slugs from injuring it.

OUR CUCUMBER HOUSES DURING AUGUST AND SEPTEMBER.

GROWN SPECIALLY FOR SEED.

CUCUMBER (Frame)

(Cucumis sativus.) CUCURBITACEÆ.

CULTURE.—Nothing is so desirable as good Cucumbers, but attention is required if good fruit is to be obtained. The seeds may be sown in January or February in pots or pans. The temperature of the seed-bed should range from 70 to 80 degrees, never sinking below 60 degrees. Outdoor or Ridge Cucumber should be sown in pots during April, and transplanted in May to a spot previously prepared with well-rotten manure.

Per pkt Lockie's Perfection.—A splendid variety, its chief features being the fluest in the Telegraph family, with black spines; the very thing wanted for years, as it gives this prolific class the high and delicious flavour of the old Black Spine, which the Telegraph was so deficient in. Further, it is the darkest green of any, very free, and taking all points into consideration, it is decidedly a grand addition	—s. 1		
Cannells' Selected Improved Telegraph—After several years' careful selection and rc-selection and seeding, only from the most prolific and handsome shaped fruit, our stock is now as near perfection as it is possible to be. Our two greenhouses, 100 ft. each, have been a grand sight, many joints producing four and five cucumbers, and carried them all through to maturity; flavour excellent, deep green skin, and the fruit of good length. We have saved a splendid sample of seed this season, and can confidently recommend it to our customers as a grand re-selection from the old far-famed variety, and will give undoubted satisfaction \frac{1}{2} packet, 6d.; 1s. and	2	0

CRESS.

PEPPER GRASS.

(Lepidium sativum.) CRUCIFERÆ.

CULTURE.—Plain and Curled Cress should be sown weekly during the whole year, if a regular supply is required, the state of the weather regulating the method of sowing. As a rule, from November to March, a gentle hot-bed is the best. Australian Cress sown in the open border during March and April, and in a cool and shady place in May, will produce crops in succession; and if sown under a north wall in September and October, with a little protection, will afford a supply during Winter and Spring. Water Cress may be easily grown in a damp and shady place, and on no account must suffer from drought. Sow in March and April.

LEEK

(Allium porrum).

CULTURE.—For an early crap sow in a pot, pan, or box early in February, and place in a frame or a slightly-heated place, and when the

plants are 3 or 4 inches high, prick out in a sheltered position or frame in rich soil. Here they are to remain until good-sized plants are formed, and then transplanted to their permanent quarters. Leeks of very fine quality, and good enough for ordinary use, may be obtained from seed sown the first week in March, broadcast, on a warm horder, and cover lightly with mellow soil. Transplant, when large enough, in rows a foot apart, and about 8 inches in the row, in the same way as Celery. Well manure. nianure.

CANNELLS' MAMMOTH-A superior kind, very hardy, blanches well, and grows to a large 6d. & 1s. per pkt., 1s. 6d. per oz. Champion.—This Leek has gained many honours, including s. d. all the First Prizes at the recent International Horticultural Exhibitions. It was Certificated by the Royal Horticultural Society at the Vegetable Conference, 1889, 6d. & Henry's Prize London Flag Musselburgh-Large Scotch ... The Lyon-A thoroughly distinct variety, matures early, grows to a great size and weight without coarseness. The white part, when hlanched, often exceeds 16 inches in length and 9 inches in circumference

LETTUCE.

(Lactuca sativa.) Compositæ.

CULTURE.—Sow from the first week in March till September for succession. When 3 inches high, remove the strongest plants to prepared ground, and plant them in rows from 1 to 2 feet apart, according to size. For Spring use sow in Autumn, prick out in frames, and transplant early. After being planted they should never be allowed to suffer for the want of water.

TOM THUMB LETTUCE.

MELON.

(Cucumis melo.) CUCURBITACEÆ.

CULTURE.—Similar to that of the Cucumber, but requiring several degrees more of heat, which must be maintained with regularity. A quick growth should be encouraged during the earlier stages, and when about one foot or so high the tips should be pinched out, causing them to come stronger, and the fruit sets more freely. As a rule they are in perfection just before the stems come away easily from the fruit. The soil should be kept firm and solid throughout the growth.

Kept him take botte the organical the growth.

NEW VARIETIES OF 1893.

KNOWSLEY FAVOURITE.

Melon, Knowsley Favourite—For delicious flavour, deepness of flesh, and thin rind, contrasted with other green-fleshed varieties, we have no hesitation in recommending as a great acquisition, and one that will give the greatest satisfaction to every grower. It is the result of a cross between Knowsley Green Flesh and Wm. Tillery. The plant has a robust constitution, similar to its parentage. It is moderately early, a sure setter, and a good grower. The fruit weighs from 3 to 5 lbs., occasionally more. In shape mostly round, but sometimes inclined to be oval; free from corrugations, finely uetted; flesh pale green and very deep, particularly juiey, and of exquisite flavour.

Per packet, 1s.

WYTHES' SEEDLING.

Melon, Wythes' Seedling—A cross between Limefield Seedling and a varie raised by Mr. Wythes not named. It is very early indeed, and a fine setter, produci fruit of medium size with golden skin, outside moderately netted, and very thin rin A more remarkable feature of it is that the flesh is not strictly scarlet or green, but combination of the two. The flesh is of high quality, and of an exquisite flavour, may be grown with little heat in the summer months, being very free.

Per packet, 1s. 6d

MUSHROOMS.

(Agaricus campestris.)

Having every facility, and to be quite sure that nothing but the best shall come from us, we collect samples from all sources where mannfactured, immediately test which is the best, and purchase largely; consequently, all our enstomers succeed, most of them far above their expéctations. At this moment we have a large stock, and beyond all question the finest ever offered. Per brick, 6d., postage, 4½d.; per peck, 1s. 6d., postage, 1s.; per bushel, 5s.

A Practical Treatise on the Cultivation of Mushrooms, by J. Wrlght, F.R.H.S., price 1s., post free 1s. 2d. Mr. R. Gilnert, High Park Gardens, Stamford.

If anything ever did deserve the name of unique, surely your Mushroom Spawn does. I have been a grower for many years, and better crop I never saw. Keep a good stock so I can depend on getting it whenever I want it fresh.

By using Cannells' Perfect Mushroom Spawn they can be had all the year round.

MUSTARD.

(Sinapis alba and S. nigra.) CRUCIFERE.

CULTURE.—Sow every fortnight for succession in boxes, in heat when too cold out of doors. On account of making such rapid growth, should be sown about a day or so later than Cress, when they are required to come in together for cutting.

CANNELLS' SILVER MEDAL ONIONS.

(Allium cepa.) LILLIACEÆ.

Awarded a SILVER MEDAL for our collection at the Royal Horticultural Society's Show, held at the Agricultural Hall in August, 1893.

OUR ONION FIELD BETWEEN JUNE AND SEPTEMBER.

CULTURE.—The ground should be double dug in October or early in November, great eare being taken to intermix a heavy dressing of night soil, pig or strong manure, keeping as great a portion of the manure as possible at the bottom of the trench. The ground can then be left in its rough state until early in Jannary, when a good dressing of soot may be spread over the surface, which is not only a preventive for the maggot, but a valuable stimulant for the Onion throughout its different stages of growth. Nothing more should be done until the end of February or March, when (weather permitting) the beds should be pointed over, well raked, and rolled or trodden down firm, and the seed drilled in rows one foot apart, which leaves ample room for a draw hoe, which cannot well be used too often if care be exercised to avoid any injury to the tops. As soon as the Onions are up and well established thin out to 9 inches apart, and during an early stage of their growth a liberal top-dressing of spent mushroom bed manure would be beneficial in keeping the ground moist and cool in hot, dry seasons, and saving a considerable labour in watering. When they are in full growth a dressing of or "Real Manure," two ounces to the yard, will do wonders for them. For what are termed Tripoli or Winter Onions, sow early in August and transplant the following spring.

AILSA CRAIG—One of the largest and most beautiful kinds yet introduced for exhibition purposes, bulbs, which vary from almost a globe to a flat oval shape; are of

Improved Wroxton.—A very valnable Onion, and is acknowledged to he the mildest flavoured and best keeper in cultivation. It may be grown to a large size, from 16 to 20 onnees in weight; the skin is of a very delicate light brown straw colonr. It is an egg-shaped type, and quite distinct ...

a pale straw colour

Banbury—This wonderful eropping Onion still retains its high reputation; it is a fine shape, with a bright yellow skin, and a snitable variety for the exhibition table

per oz. 1 0

If sown in March, will produce full-grown bulbs early in the Summer; most suitable for pickling 1 0 Trebons-Yellow; large, one of the best; splendid exhibition sort per pkt. 6d. White Globe-Should be used early ... White Lisbon-Of medium size; esteemed for its mild flavour White Spanish, or Port-One of the best for main crop...

COLDIN BALL.

DANVER'S YELLOW ONION.

PARSLEY.

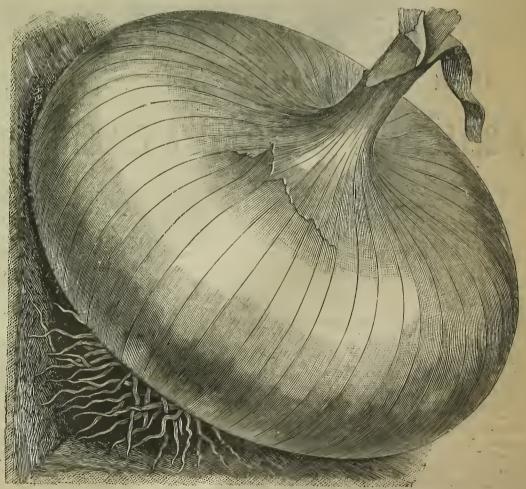

(A pium petroselinum.) UMBELLIFER A.

CULTURE .- Should the weather culture.—Should the weather be dry, sow early in Fehrnary; if not, defer till middle of March. Sow again in May, and also July, for finnishing plants to stand over winter. Parsley seed is rather longer than most seeds in germinating, and should be watered in dry weather if uecessary. The secret of having it good all the year is to sow in good soil, 16 inches from plant to plant.

Cannells' Beauty of the Par-terre—Perfectly distinct from all others. The handsomest sort extant, highly decorative in the garden, and as a garnishing plaut it is unsurpassed. When once tried no other variety will be grown. The plants should be thinned out to at least 12 inches apart. per packet, 3d. and 6d.; per oz., 1s.

Glanafon Gardens, Taihaeh, near Port Talbot. Sirs,—I have grown Parsley extensively for a great many years, and have tried several varieties, but in my opinion your "Beauty of the Parterre" is the finest in cultivation. I have some roots over two feet in diameter; it is really handsome, and I would recommend it to all. H. MOBRIS.

Per oz.—s. Covent Garden Garnishing -One of the hest curled varietics grown ... Fern Leaf—Invalnable as a gar-nishing plant and for table decoration; fluest in cultivation Moss Curled-Abcautiful variety Myatt's Garnishing-A splendid variety; very double Turnip-rooted, or Hamburgh
Roots used for stewing ...

WHITE ITALIAN TRIPOLI ONION.

PARSNIP

(Pastinaca sativa.) Umbelliferæ.

CANNELLS'
HOLLOW-CROWN
PARSNIP.

CULTURE.—Sow about the second week in February, or first in March, or as early as the ground is in a fit state to receive the seed, choosing a light deep-trenehed soil if possible; and if required for exhibition, make a hole two feet deep with a crowbar, push this round so that the hole is largest at the top, fill with fine soil, and finish off with dibbing in three seeds. After germinating leave the strongest seedling, assist them when in full growth, make four holes a foot deep in the soil and about five inches away from the plant, which can be occasionally filled up with liquid manure, and with proper care and attention afterwards, clean, well-grown specimens will be the result, that will astonish all beholders. They should be allowed to remain in the ground as long as the weather permits, and when lifted should be carefully placed in sand.

be carefully placed in sand.

CANNELLS' "BEAUTY OF THE PARTERRE."
Very much the best ever seen, adding a beauty to every dining table.

Mr. D. Plumbler, Opawa Cottage, School Green, Freshwater, I.W.

I am pleased to say that I followed out your instructions in planting vegetables, and succeeded in obtaining four first, two second, and one third prize at our show, and a flower prize. Last year I did not win a prize of any sort, so I think I owe much to your catalogue, it being only my second year of gardening.

OUR POTATO FIELDS, JUNE, JULY, & AUGUST.

A SELECT LIST OF KITCHEN & EXHIBITION SEED POTATOES.

(Solanum Tuberosum) SOLANACÆ.

Those marked with a * are good Exhibition varieties.

We grow, at our farm at Eynstord, many acres all for seed on calcareous soil, and as change of seed off different soil is so essential for heavy and healthy crops, our seed potatoes will be found to give undoubted satisfaction both for exhibiting and table purposes. Great attention and eare is bestowed upon each variety to keep them perfectly true. All samples are hand picked by experienced men who are well acquainted with the respective sorts.

Our collection consists of about 100 varieties. In the list enumerated below are some 40 to 50 varieties, which we consider the best for table, show, and first prize winners. We are offering our seed potatoes very cheap, in order that change of seed can be within the reach of all; for after our practical experience and observations, we publicly and confidently assert it is money well spent.

culture.—Consider the condition of the soil—if rich, pulverize it by digging two, three, or four times; if poor, manure it with our Real Manure, which always doubles the crop. Plant early, before the strong eyes at the principal end start growing. Do everything possible so that the foliage is in no way injured. Always feel a pride in seeing the tops die down a golden yellow. Take up early. Never clamp up tight until frosts set iu—this prevents premature growth. Peel with a proper peeling knife. Do this every evening, and let them lay in water all night, and you certainly cannot fail to have mealy, beautiful eating Potatoes.

A SIMPLE AND CHEAP PREVENTIVE OF DISEASE.

We have tried this method, and found it answer satisfactory, on the Beauty of Hebron—and that is double earthing. Earth up the potatocs as usual, and about a mouth after earth them up again. Always plant your sets deep. Be sure to make the top of the baulk as pointed us possible, resembling a Λ upside down. Any hollowness on the top of the haulk is setting a trap to catch the germs of the disease which are washed down by the rain on the tubers, hence commences the disease. Pat both sides of baulk well with a spade or shovel, we found it prevented the disease and the crop heavier,

White Varieties, Kidney and Round-

(34)

*Cannells' "Come to Stay."—Many laughed and 56 lbs. 14 lbs. ridiculed this engraving when it was first seen in England. It has not exceeded the quantity of tubers shown, but it is a staying favourite when woll grown and the greatest cropper in existence. Even if the crop is half diseased, it is then equal to tbe Beauty of Hebron, which it resembles in eating and other qualities. In a dry, hot season it would be by far the most preferable Potato in enlitivation; ready to dig very early 6 0 2 0

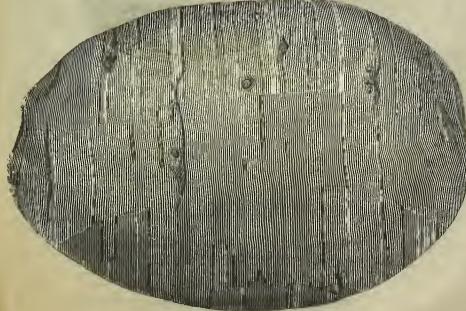

*Cannells' "Victory."—This put on any gentleman's table, properly cooked, would so attract the attentiou and taste of everyone that it would have to be grown in every garden. In every respect it is, in our opinion, the best early Potato yet sent out, and for exhibition a model. It is certainly the best for private gardeus 8 0 2 6

We are prepared to supply the undermentioned collections at a very low rate, packing free and carriage paid to London only;—

A collection of 50 varieties, one tuber of each 10s. 6d.

A collection of 12 varieties, one peck of each variety, well adapted for the table or exhibition; all are good croppers and disease resisters—viz., Wilson's Ashtop, Beauty of Hebron, Wormleighton Seedling, Peachblow, Lily White, White Rose, Reading Hero, Chappel's Cream, Maincrop, Prime Minister, The Bruce, Welford Park, for 21s.; 7 lbs. of each for 10s. 6d.

GARDENERS' CHRONICLE. H. Cannell & Sons showed a grand lot of Potatoes.

DAILY GRAPHIC.

Messrs. Cannells' Eynsford Mammoth Potato was predigious.

THE GARDEN, September 30th, 1893.

Messrs. Cannell showed 50 dishes of Potatoes, the best being Victory, Satisfaction, Chancellor, and some enormous tubers of Eynsford Mammoth weighing 3 lbs.

SCHOOLMASTER.

THE GARDENERS' MAGAZINE, September 30th, 1893.

Even more noteworthy were Messrs. Cannells' collection of Even more noteworthy were Messrs, Cannells' collection of Potatoes, for they were alike remarkable for their high quality, the cultural skill that had been brought to bear upon them, and the taste with which they were arranged. Conspicuous among them were Eynsford Mammoth, a large kidney variety, dwarf in growth, a heavy cropper, and of excellent quality; Field Marshal, a red kidney, much brighter in colour than others of its class, and a good cropper; and Sweetheart, a white kidney, handsome in appearance, productive, and of excellent quality. (Silver Medal, R.H.S. Show.)

Messrs, Cannell had an excellent collection of Vegetables, the Potatoes being very fine. (Earl's Court Show.)

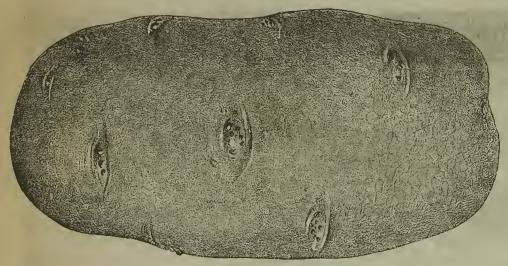

Other Varieties in Commerce, and not mentioned in this List, can be supplied at Current Prices.

We should be pleased to supply Collections of 12, 18, or 24 Varieties, consisting of the finest Exhibition kinds or for Table use.

On application, Special Quotations per ton will be forwarded.

Our Prices are liable to be altered after the middle of March.

Public Institutions, Hospitals, &c., supplied on Special Terms. Large or small quantities forwarded. Send on list of kinds and quantities required.

PRIZETAKER POTATO.

The Carriage of Potatoes, Mushroom Spawn, &c., as part of a general order or alone, will be prepaid to any Station in England when the total value is not less than 20s., and to Ireland or Scotland when the total value is not less than 40s.

RADISH

SAVED FROM TRANSPLANTED AND SELECTED ROOTS ONLY.

(Raphanus sativus.) CRUCIFERA.

CULTURE.—To have early, sow in frames near the glass in January; in the open ground in February, and every fortnight till August. To obtain crisp, sweet-eating radishes they must be grown quickly.

Black Spanish-Large round; sow in Autumn 0 6

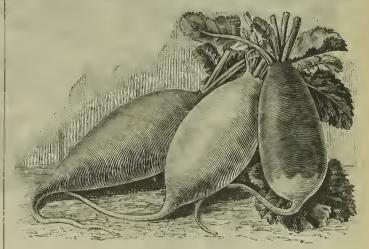

FRENCH BREAKFAST RADISU.

Wood's Early Frame—Very early; fine flavour per quart, 2s. 6d.; per pint, 1s. 3d.	0	3										

RAMPION

(Campanula rapunculus).

CULTURE.—Rampion is a vegetable which may be used cooked or as a salad, but it is not nearly so much grown as it should be, especially when considered what a good substitute it is for Radishes during the early Autumn months, and when owing to heat and drought the latter are sometimes difficult to obtain in a tender condition. Sow seed on a light porous soil in drills not less than 6 inches apart, and having covered them with about a quarter of an inch of soil, well tread the bed over and rake down smoothly. When the seedlings are well through the ground, thin them out to not less than 4 inches apart. After about three weeks, give the bed a thorough soaking with water, and the crop will be assured, unless the weather prove dry for a very long period, when duplicate waterings will be of great benefit. To secure a continued supply it is well to make several sowings, one early in the month of April, one about the third week in May, and a third and last about the same time in June.

3d. aud 6d. per packet.

RHUBARB (Seed)

(Rheum rhaponticum.) POLYGONEÆ.

CULTURE.—Sow in drills in April about 1 inch deep thin out to 6 inches apart, and transplant in Autumn into a bed well manured 3 feet apart each way. Seed sown in this way will produce good roots the second year.

Finest Mixed Varieties Per packet—s. d. 0 6

Rhubarb Roots, see page 44.

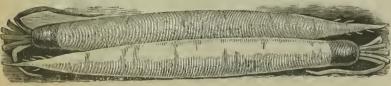

SALADS.

We supply seeds of plants generally used at various times of the year in the preparation of this now recognised necessity on the dining table. Descriptions will be found under the various headings—Barbe de Capucin, Celeriae, Chervil, Chicory, Chives, Corn Salad, Cress, Cucumber, Dandelion. Endive, Lettuce, Mustard, Nasturtion. Purslane, Radish, Rampion, Salsafy, Shallot, Tarragon, Tomato, Watercress, Witloof.

SALSAFY (VEGETABLE)

(Tragopogon porrifolius). Composita.

CULTURE.—Although Salsafy is not usually cultivated in small gardens, there is no reason why it should not be, as the roots form a valuable addition to the somewhat limited list of winter vegetables. They are easily cooked, merely require seraping, steeping in vinegar and water, then boiled until tender, after which they may be served up with white sauce. The enlure is quite as simple. Choose a piece of ground that has been well dug and manured previously, the surface also should be well pulverised. Sow the seed first week in April, in drills 15 inches apart and about 2 inches deep. As soon as the plants are large enough to handle, thin out to about 9 inches apart. Beyond this, except keeping clean from weeds, this is all the treatment required until growth is completed in Autumn, when the roots may be lifted and stored in sand, or allowed to remain in the ground until required for use. Those left in the ground will produce flower stems in spring, and these if cooked when young make an excellent table vegetable.

SALSAFY, CANNELLS' MAMMOTH.

SCORZONERA

(Scorzonera hispanica). Composita.

CULTURE.—Same as for Salsafy. The roots are boiled or stewed in the same way as Parsnips. A delicious vegetable.

10d. per oz.

SEA KALE.

SEA KALE, SEED.

(Crambe maritima.) CRUCIFERA.

CULTURE—Sow in March or April in rows, about 15 inches apart, and keep the plants clear of weeds. Transplant to good, well trenched, and rich ground, in clumps of about 4 or 5, and between each lot so planted leave a space of about 3 feet, so that any one can move between them during the growing season.

9d. per oz.

For Plants, see page 44.

SPINACH.

(Spinacia oleracea.) Chenopodiacea.

CULTURE.—Should the weather be favourable, a small sowing of the round variety may be made in January, another in February, and a larger one in March. Successive sowings may then be made every three weeks till the beginning of May, and afterwards weekly to the end of July. For Winter use, sow the prickly variety weekly during the first three weeks in August. The "New Zealand" should be sown in heat and transplanted, and be protected till the beginning of June, when it may be planted out without shelter.

CANNELLS' ROUND SPINACH.

Victoria-Larger leaves, more fleshy, and superior quality to the ordinary spinach; stronger grower, and needs more room than the prickly; quite hardy, and is not so apt to run to seed

CANNELLS' PRICKLY SPINACII.

Cannells' Prickly, or Winter—		
For Winter use per qt., 2s.; per pint, 1s.	0	3

Flanders Broadleaf—A broad-leaved hardy variety ,, 2s.; ,, 1s.		
New Zealand-Should be sown in Rebruary in heat and		
transplanted in June	0	8
Orache, or Mountain—Quite distinct	0	6

TURNIP.

(Brassica ropa.) CRUCIFERA.

CULTURE. - Sow in March, April, and once a month till the end of August. Sow Six Weeks and Snowball till May; they are the best for early use. Per oz.-s. d. All the Year Round-A green-top yellow variety; stands the severest weather *** *** *** *** American Red Stone-A most excellent kind Cannells' Early Six Weeks. - Beantiful shape, the quickest variety grown, and one of the best for general crop. per pint 1s. 9d. 0 4 Chirk Castle Black Stone-A capital variety for August sowing for Winter use; the skin is black and the flesh snowy white. The quality is first-rate, and as the bulbs bury themselves well in the soil they remain good all through the winter and in the most severe weather Early Purple-top Munich-The earliest of all, fine flavour; suitable for exhibition Cannells' Early Snowball-Good for Exhibition, per pint 1s. 9d. 0 Early White Stone-Suitable for Summer use per pint 1s. 9d. 0 Green-top Stone-For late sowing ... per pint 1s. 9d. 0 Jersey Navet-A white variety, oblong shape, mild, sweet flavour; good for late sowing to stand the Winter Orange Jelly, or Golden East—the best yellow variety per pint 1s. 9d. Turnip, Model White.—This variety is remarka to ar its form, earliness, and quality, and it cannot be too street region, meuded to exhibitors. The Gardeners' Chronicle says: - Wo.: White Turnip is the greatest advance in white varieties that we have seen.' Awarded Certificate at the Royal Horticultural Society's Vegetable Conference. ...

Turnip, Golden Ball .- This was certificated by the Royal Horticultural Society as the hest type of yellow garden Turuip. The flavour is excellent, and it stands the winter almost as well as a Swede. It has been awarded numerous

EARLY PURPLE-TOP MUNICH TURNIP

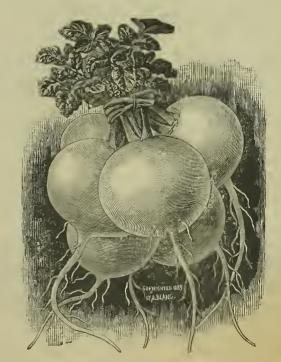

YELLOW FINLAND TURNIP

White Dutch

AMERICAN RED STONE TURNIP.

per pint 1s. 9d. 0 3 Yellow Finland-A splendid variety, which can he sown either in Spring or Autumn; bulbs very even and regular in form, somewhat hollowed at the base, with a very small tap root; smooth skin of a pale orange-yellow colour, the upper part a pale green,

yellow flesh, solid and excellent

CANNELLS' EARLY SIX-WEEKS TURNIP.

TOMATO, or LOVE APPLE.

(Lycopersicum esculentum.) SOLANACEA.

We had during the summer our 100-feet house of these, grown specially for trial and seed. Noue were better than those now offered.

CULTURE. - Sow in February or March in heat, pot, and gradually harden off, so that they may be ready to plant ont the latter part of May to a sheltered location. For indoor purposes, get good plants in 4 or 5-inch pots; when they show a truss of flower they require fertilising or setting with a camel-hair brush. As soon as the fruit is formed, plant them out in ordinary good soil, 12 inches from plant to plant, pinch out all side shoots, and preserve the large leaves; if fruit fails to form, apply pollen at once, so that the plants bear fruit from bottom to top. Pick fruit as soon as ripe, and never select any other than fruit full of seed: ill-formed ones are disappointing, and often get seedsmen and gardeners in bad repute on this account.

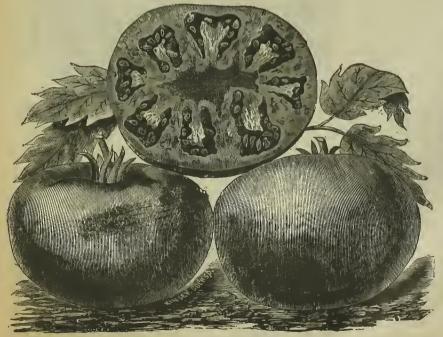

Per pkt.--s. d. CANNELLS' PERFECTION—Perfectly smooth and very solid; ripens evenly and early; enormously

productive, and contains very few seeds

CHALLENGER — Granted an Award of Merit by the Worshipful Company of Fruiterers at the Guildhall Exhibition, 1890.—The fruit are borne continuously in clusters of eight, ten, and sometimes more, are of medium size, very solid and heavy, bright searlet colour, excellent flavour, very fleshy, and with but little core; a grand exhibition or market kind. It is alike good under glass or in the open, but is preferable for indoor culture on account of its tall growth and profuse bearing qualities ...

DISH OF CANNELLS' PERFECTION.

LIVINOSTONE'S FAVOURITE TOMATO.

Laxton's Open Air—Has much to recommend it: exquisite flavour; first-rate variety for growing outdoors; a remarkably free setter of good size and prolific, fruiting within several inches from the		
ground, and continuing up the plant for several consecutive joints 3d., 6d. and	1	0
Livingstone's Favourite—Is one of the best, largest, and most perfect-shaped varieties in cultivation; ripens evenly and early, and bolds its size to the end of the season 6d, and	1	0
	1	U
Mikado—An American variety, grows to a very large size; one of the best 6d. and	1	0
President Garfield—Enormous size, and ripens evenly; delieions flavour 6d. and	1	0
Prince Albert Victor—(A variety from Conquerer and Mayflower) —Frait large, flesh very solid, grand flavour, colour bright crimson, shape round and smooth, stems short-jointed, and a very heavy		0
cropper	1	6
Purple King—(A cross between Moore's Gem and Mayflower)—Colour very bright purple, shape round and smooth, of medium size, very prolific, and quality first-rate	1	6
Red Currant, or Cluster—Highly ornamental and interesting, producing an abundance of small fruit in clusters similar to Red		
Currants, but larger 6d. and	1	0
Stamfordian—Good for exhibition purposes 6d. and	1	0
The Trophy—This ranks amongst the earliest, and is, without		
doubt, the largest, most fleshy, and best flavoured of all when	1	0

Per pkt. Vick's Criterion-Medium-sized fruit, resembling a plum in Yellow Trophy—Identical in shape and size of the well-known Trophy, but in colour a beautiful yellow

OTHER VARIETIES CAN BE SUPPLIED.

MIKADO TOMATO

Mr. T. Binley, The Gardens, The Chestnuts, Leicester, February 13th, 1893. I might say that Perfection Tomatoes grown from your seed were beautiful. I have had nothing to equal them.

Mrs. E. Clarkson, Lansdown House, St. Leonards, October, 1893.

The Mushroom Spawn I had of you is doing splendidly.

Mr. J. R. McKiddle, The Gardens, Rossie Priory, Inchture, February 2nd, 1893. All the seeds obtained from your firm have given the greatest satisfaction

Mr. F. Lewis, Bromley, Kent. March 13th, 1893. Last year my garden was highly satisfactory. I attribute it entirely to the excellency of your Seeds. There was abundance of all kinds. C. Benley, Esq., Albion Cottage, Croydon, February 17th, 1893.

I found your Seeds quite up to your advertised term "Perfeet" all round. Your Potato Victory is, I should say, as good as a potato can be.

B. Hooke, Esq., The Towers, Hillingdon, Uxbridge, February 17th, 1893.

The Right Rev. Bisnop Jenner, Preston Vicarage, Dover. April 22nd, 1893. The Stanstead Park Lettuce from Swanley has proved itself a most excellent one. My gardener considers your seed the finest he has ever had.

VEGETABLE MARROW

(Cucurbita ovifera).

CULTURE.—The seed may be sown in a slight heat the end of Mareh, and shifted from the pots about the middle of May, when select an open piece of ground and throw out holes from two to three feet square and open piece of ground and throw out holes from two to three fect square and one foot deep, which should be at least 12 feet apart, the soil thrown out being used to raise the sides. A layer of dry leaves or litter should be spread over the bottom, and afterwards a sufficient quantity of ordinary good soil, wherein a small portion of leaf soil and spent manure has been mixed, to refill it. The plants being hardened off, should receive at the time of planting a good watering, and be shaded and protected as long as necessary. Planted in this manner they make firmer and shorter jointed growth, are more prolifie, less water required, and are not so liable to go off when in full bearing, as often happens under a more forcing treatment. They can also be grown with sneeess outdoors by putting in a few seeds the first week in May, where they are to remain.

Mr. C. FAULKNER, The Gardens, Silverdale, Staffs.

I am quite pleased with your seeds, and can safely say they are the best and most reliable I have ever had; my master, also, says they come up splendidly. I also have to express my thanks, and do not hesitate to say that Messrs. II. Cannell & Sons Catalogue and Guide are the most complete and best I ever saw; most enjoyable to look through. I shall be pleased to see them regularly C. Leeson, Esq., Wrawby, Brigg, October 24th, 1893.

STACHY'S TUBERIFERA.

Stachy's Tuberifera (Chinese Artichoke) Choro-Gi.—Quite a novelty, and should be tried by every one. The plant is more profitable than French Beans, and during the autumn and winter season the tubers are welcomed as a variety in vegetables. As a salad it is quite equal to Radishes, being brought to the table in the same way. It is as hardy as Knot Grass, not affected by frost in the least. The tubers should be lifted in November and stored in dryish earth or sand, not in damp material, as with the latter the growth is apt to recommence.

Tubers, per lb., 1s.; 7 lbs., 5s. 6d.; 14 lbs., 10s.

All raisers of New and Improved Vegetables are respectfully asked to send us good samples of the same, with the view of purchasing the entire stock.

WONDERFUL REAL MANURE. OUR

TREBLE YOUR PRODUCE.

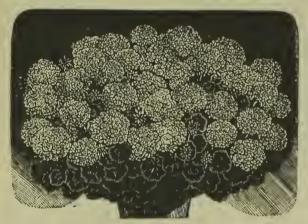

GREENHOUSE PLANTS. FOLIAGE and POT PLANTS. ROSES, VINES. VEGETABLES.

Gives a brilliancy in colour and more breadth and substance in petals (that is to say, flowers on plants) than any other. Its effects are most marvellous at this season, if applied to Primulas they will be as good again as they would otherwise. A 1-lb. tin will show its effects and guarantee its general use.

Sold under the Analysis of Dr. A. B. GRIFFITHS, F.R.S. (Ed.), F.C.S., whose report is in our possession.

1-lb. tin 1s., post free 1s. 4½d.; 3-lb. tin 2s. 6d., post free 3s. 1½d.; 6-lb. tin 4s. 6d., post free 5s. 6d. In Bags -- 14 lbs., 8s.; 28 lbs., 15s.; 56 lbs., 25s.; 1 ewt., 45s.

ALWAYS AN ABUNDANCE OF FLOWERS.

UST one powerful ingredient makes this Manure far superior to all others; its properties go direct to make Flower. Fruit, and Vegetable more brilliant, larger and finer, without the gross foliage. After one gets used to it they will soon gauge the exact strength that is necessary for any plant desired to have extra fine, the great thing is not to over apply it, but, if used with discretion, this is the most convenient and valuable of all Manures—its effect in a fortnight is marvellous—and those who use it double their produce. We have several who leave us standing orders for large quantities to be sent at stated times. All are charmed with its results, no greenhouse or garden can be near what it onght without it, and for all who wish to be first at exhibitions, it is absolutely necessary. Every shilling so expended gives another in return, and often two.

_______ DIRECTIONS FOR USE.

FOR LAND IN GOOD CULTIVATION AND GROWING CROPS-Threequarters of an ounce to the square yard, one-and-a-half ewt, to the acre. Mix with treble its quantity of fine, slightly damp soil, and scatter it regularly; you can see to a line how far it has been put.

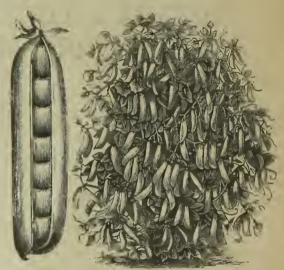

FOR POOR LAND AND POTATOES,-Four to six ewt, to the acre.

FOR POTTING .- One onnee to the bushel of good compost, and thoroughly mix.

TOP DRESSING. - Two ounces to a bushel of good soil.

LIQUID MANURE.-Half ounce to a gallon of water, and increase it a little twice a week until the plants are well in flower.

On each occasion pot or water two or three without the Real Manure, and watch the difference, it will show one way to get money, and the other to lose it.

INCREASED PRODUCTION AND QUALITY COMBINED.

EVIDENCE OF MERIT.

Mr. F. WRIGHT, Gas Works, Bromley-by-Bow. Your real Manure has proved most satisfactory, having made plants blossom that have never done so before.

FRANK W. ROBERTS, Esq., Sheen Cottage, Purley, Surrey. Kindly send me a tin of your Manure. We find it invaluable, and I have recommended it to many of my friends, who remarked how fine they get their flowers now to what they formerly were.

Mr. A. Vince, Gardener to T. Brooksbank, Esq., The Gardens, Newlands Park, Sydenham, S.E.

Your seeds have turned out a great success here this summer, cspecially Primulas and Cinerarias. Every one that sees them is astonished. They are fed twice a week with Real Mannre, which I can highly recommend. As a flower producer, there is nothing equal to it.

T. COLLIN, Esq., Stanley Lodge, Cadogan Road,

Surbiton, S.W.
I had some last Please send me another bag of Real Manure. I haspring, and found it far better than ever I have had before.

R. H. MACLOUGHLIN, Esq., M.B., Cloughjordan, Ireland. Please send bag Real Maunre. Nothing in my mind can beat it. It is the best.

LOVELY LAWNS AT SEE

LAWN GRASS SEEDS,

For TENNIS LAWNS, CRICKET GROUNDS, PLEASURE GROUNDS, &c.

THERE is nothing more essential to a rural or suburhan residence than a beautiful lawn with its close, velvety turf. In sowing down a lawn be sure the soil is perfectly clean, and if poor a good dressing of loam should be well spread over about three or four inches deep. After being well rolled and raked very fine the seed may be sown broad east and as evenly as possible, then rolled down. In a few weeks the grass will appear and be ready for cutting, which operation should be often performed, using the scythe until the lawn be well established, when it may be cut with machine and rolled as frequently as required. Sow per aere from three to four busbels.

The following mixtures contain only those close-growing dwarf Evergreen Grasses and Clovers that will produce a thick turf in a very short time:—

Lethorion, or Vapour Cones-6d., 1/-, 1/6 each.

Manure, Cannells' Real-See special page.

Mats, Best Archangel-2/- each.

.. St. Petersburg-1/6 each.

McDougall's Self-acting Tobacco Sheets-Made in single sheets, each sufficient to fumigate 1,000 cubic feet. 1/- per sheet.

Mealy-Bug Destroyer-Per bottle, 1/- and 2/6.

Nails, Cast Wall-3d. per 1b.

Nicotine Soap-From 1/- per lh.

Raffla Grass-For tying, 1/6 per Ih.

Shaw's Tiffany-In pieces, 20 yds. long by 38 inches wide, per piece, 5/-.

Shreds, Cloth-Per pound, 6d. and 9d.

Silver Sand-2/- per bushel.

Standen's Manure-In tins, 1/- and 2/6 each.

Sulphur-6d. per Ib.

Syringes-Patent Ball Valve, 2 roses and 1 jet, 17/6 and 22/-

Thermometers-Boxwood, 1/6 and 2/- each.

Thomson's Vine Manure-20/- per cwt.

Tobacco Paper and Rag-See special mention.

Tobacco-Powder-In tins, 1/- and 2/6 each.

Tweezers-Ivory, 3/6; steel, 1/9.

Verbena Pegs-Per hox, 1/-, containing one gross.

Wolff's Solid Ink Pencils-For writing on wood, 3d. each.

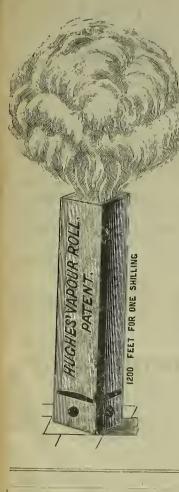

Wood Labels-For Flower Pots (painted), in hundles of 100; per bundle, 4-ineh, 8d.; 5-inch, 10d.; 6-inch, 1/-.

Wood Labels-Unpainted, in bundles of 100; per bundle, 3-inch, 4d.; 4-inch, 5d.; 5-inch, 6d.; 6-inch, 7d.; 7-inch, 8d.; 8-inch, 10d.: 9-inch,

1s. 4d.; 10-ineli, 1s. 8d.; 12-inch, 2s.

For Edging Irons, Garden Reels, Hammers, Hoes, Rakes, Saws, Scissors, Scythe, Shears, Syringe, Trowels, &c., see illustrations.

If you are in want of anything connected with the Garden not mentioned here, please write for quotation We are prepared to supply from the smallest to the largest quantities.

FIR TREE OIL.

The best and most approved of all Insecticides for killing Insects on Plants, whether at the roots or on the foliage.

As a wash for killing Fleas and Liee on Animals.

As a perfect remedy for all Skin Diseases.

As an Insecticide for Cage Birds, &e., and as a bleacher and disinfectant for washing flannels and body linen.

Full directions on each bottle.

In bottles, 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d.; and in gallons at 12s. 6d. each, or 11s. per gallon when larger quantities are taken.

HUGHES' GREEN AND CREAM SHADING FOR GLASSHOUSES, Green 1s., Cream 9d. per packet. HUGHES' FLORAL CEMENT, For fixing bloom of Pelargoniums, &c. Sold in bottles. 1s. and 2s. HUGHES' STYPTIC, For preventing Vines bleeding after pruning. In bottles, 1s. 6d. and 2s. 6d.

HUGHES' APHICIDE, 1s. 6d.

TROPICAL BEETLE POWDER.
For destroying Beetles, Cockroaches, Crickets, &c. Most effective in Greenhouses. Price 6d., 1s., & 2s. 6d.

HUGHES' FIR TREE OIL SPRAY PUMP.

Throws a fine spray 20 feet, and a jet 30 feet, with great force. Price 30s. A larger size for watering purposes, 50s.

PATENT FIR TREE OIL SYRINGE.

Large size, 24s. Medium size, 17s. 6d. Small size, 12s. 6d. With 5 feet of Tubing to each.

For Worms on Lawns.

WORM DESTROYER.

Sufficient for 30 gallous of water. Packets, 1s. each

HUGHES' VAPOUR ROLL FUMIGATOR

Is sufficient for 1,200 cubic feet.

Is a wonderful invention, and surpasses anything ever produced. Is simple, and burns with a fragrant smell.

Is perfectly safe, and never flames in harning.

Gives out a large volume of vapoury smoke which penetrates the Houses and destroys all insect life.

Is cheap, effective, and always ready for use.

Price 1s. Box of refills for three Vapour Rolls, 2s. 6d.

Mr. H. C. Prinser, The Gardens, Buxted Park, Uckfield, June 17th, 1893.

I exhibited your Pea in a collection at the Royal Hortienltural Society's Meeting. It grew to the height of two feet, and was covered with pods of a good flavour. I strongly recommend English Wonder as the best early field pea in cultivation.

Mr. James Gibson, The Oaks Gardens, Carsbalton, Surrey, June 15th, 1893.

English Wonder Pea, sown out of doors in the first week in February, were fit to gather on 20th of May. Its cropping qualities I consider to be exceptionally good, while its flavour is, in my opinion, unequalled by any other early pea in enlitivation.

Mr. Wm. Pope, The Gardens. Highelere Castle, Newbury, June 28th, 1893.

English Wonder Pea, I am pleased to say has given me great satisfaction. It came into use a day or two later than William Hurst and Chelsea Gem, but it is much superior to these in cropping qualities, flavour, and appearance. It will, I am sure, become a favourite with all when better known.

Mr. R. Milner, Penrice Castle Gardens, Swansca, June 13th, 1893.

Your English Wonder Pea is a great improvement on all early varieties I have grown, both for cropping, carliness, and quality. Sown on Tebruary 6th, I was able to pick for table on May 9th. Height 15 inches, and literally covered with pods, which contained from 8 to 10 peas of a rich green, colour and of superior quality. Gardeners who require a Pea of first quality combined with earliness will do well to grow this variety.

Mr. Jas. Douglas, Great Gearies, Ilford, Essex, July 18th, 1893. I heg to say that your Dwarf Pea English Wonder still maintains its high standard of excellence in dry season as it did the wet one of last year.

Mr. T. Turron, The Gardens, Maiden Erlegh, Reading. July 4th, 1893.

1 sowed your English Wonder Pea on March 21st, and it was fit to gather on June 21st, not having had a drop of water after they came up, and yet the pods were as full as other peas are in an ordinary senson. The crop was splended and of excellent quality. I must repeat what I have often remarked that had your English Wonder been more generally grown there would not have been scarcity this season. It has indeed a wonderful constitution, and I predict it a great future.

Mr. Bailey Wadds, Birdsall, York, July 4th, 1893.

The Dwarf Early Marrowfat Pea English Wonder is an excellent variety, good cropper, compact thick habit, and very free. Valuable for frames and early borders.

Mr. R. Lyr, The Gardens, Sydmonton Court. Newbury, Berks, June 24th, 1893.

The English Wonder Pea has turned out well. I like it immensely, quite the best variety of its class I have ever grown. A wonderful cropper, being completely covered with pods of good size and colour, and when cooked are of extra good colour and flavour for an early variety. I am sure as it gets hetter known it will be grown very extensively, as it far surpasses American Wonder and many other early varieties at present in the market.

Mr. GARDENERS' CHRONICLE, June 17th, 1893. H. MARKHAM, Mereworth Castle, Kent.
I have not grown Cannells' English Wonder before. It is to my mind rightly named, as it has proved simply perfection here, and I shall grow it largely.

BOUQUET WIRE (Silver White).

This Wire is of the finest quality, smooth and easy to work, no matter how long kept.

Stalk Wire in 4-lb, packets (about 500 wires), two different thicknesses of wire in each. Price 6d. Postage extra.

Mr. S. Reeve, Saxmundham, March 23rd, 1893.

I am pleased to say the Seeds I have had in past years have given great satisfaction and have all come up well.

Mr. Green, The Gardens, The Waldrons, Croydon, June 28th, 1892.

C. Bewes, Esq., Inceworth, Plymouth. August 24th, 1893. in the West of England.

K

King's Patent Eradicating Weeder.

This important little Tool. made of the hest Steel, is essentially a HAND WEEDER, nine inches long, handle included, of a most companionable description, having five sharp edges, by which all weeds can with facility be scraped. cut, or dug out: the earth loosened, pulverised, or smoothed as desired, in an efficient manner with the greatest expedition, with-OUT SOILING THE HANDS. Weeds amongst Onions,

Carrots, Beets, and other Crops can be extirpated at any stage of growth in a quarter the time usually occupied. It is a boou for pot culture or the flower garden, where its handiness is greatly appreciated. Every gardener that has tried it pronounces it the MOST PRACTICAL AND USEFUL TOOL of modern invention, regarding it as necessary to his equipment as the spade, rake, trowel, or hoe.

1s. 6d. each.

King's Patent High Level Watering Pot.

·60000

Obviates the uccessity of elimbing or shifting steps to water pots on hanging shelves, baskets, &c., or removing pots on lower tiers of shelves to reach those on the upper. By detaching the string from the hrass loop on the spout,

and the pot from iron frame, it can instautly be used as an ordinary watering pot. It is light, durable, and handy, fills a long-felt want, and pays its cost in less than a week by its cleanliness and saving of time aud trouble.

0000

Made in the following sizes:-

 $\frac{2}{6}$ 3 Quarts. 6 4/- 4/6 each.

HOW TO DIG A BIT OF GROUND.

What a lot of jobs are done wrong, certainly not so correctly as they might and should be if we only give a few minutes' consideration and say, "Let us look first if this is right, and the best way to attain the object in view, what is wanted and what to avoid." Jack will say, "I've always seen it done so and so." Well, Jack's way will probably answer, and may or may not be good, but in these days we must adopt the best and most reasonable mode, all things considered. The illustration and our remarks will show and explain how a piece of ground should be dug, how things should he planted, and how treated after planting. How strange so important a matter as digging and phiverising ground is that no one, so far as our experience goes, has ever dealt with the matter properly, or what we should say, carried out the work to the fullest extent for the best. There are plenty of ploughing matches, hut no digging matches—and why not? Here a little item about workmen: without hardly a single exception they will shun the work, when it should be to them a pleasure: they never try to adopt or think how would be the hest and quickest, and most common-sense way to do it well, but plod on in an unthinking manner. It is of little consequence where and how the ground is situated, it will be best to dig half up, and the other half down, as shown.

Supposing it is a hit of ground with ordinary paths which is required to he turned up to look well and grow a good crop. First see that the ground is level, if not, take a forkful of the soil out here and there from the highest points, and throw into the lower parts until sufficient is moved so that all will be level when finished, for unlevel ground looks extremely unskilful; then wheel on the manure, spread it well and regularly, that is to say, evenly everywhere, just as much round the edges as elsewhere, generally a lot is left where first put, and the crop grows uneven and looks bad—people wonder the reason. This done, peel or skim off the paths all round sufficiently deep to get below the hearts of the weeds, throw this on the ground to be dug in; after this, line out or square the bit of ground. This done, clear off all weeds (see Engraving, Nos. 1 and 2), so that the soil to make a trench is cleau, and also where it lays on No. 1. In digging observe the position of the man when the fork is heing thrust into the soil with his heel on the shoulder of the tool, and his thumb through the cot of the handle, so that he has a firm hold and command over the fork or spade, which must he kept upright, and thrust down the full length (or at least a foot) of the blade or prongs; no rolling over the soil, small thin slices is far the hest and quickest, this lifted clean up rarely requires much breaking afterwards. It will be seen that the man at No. 3 has just finished up to where he wanted to go; he then turns and commences to take out trench

on the other end of the next half, which he fills in at No. 3; this all laid level, he digs back to No. 1. Here he finds the soil he first took out at No. 2; this being free from weeds, it is filled in, and the work is finished off in a workmaulike and proper manner. Always keep a fair sized trench, so that all weeds can he put down and huried deeply, and for all special purposes have it extra deeply dug hy going all along the trench from end to end and leaving it there, so that the next ordinary trench folds in on the top of it. When all this is carried out the whole should lay roughly level. Always dig square up to where the ground is required to he dug, and the trench fill in along, not up to one corner as is usually done, if so it will be out of level and unworkmanlike.

Arrange the ground so as to fit the position, all grass rubbish and manure must be thoroughly huried and the job finished, that the digger could say, with all pride, "Well, that is done as it should be. I have studied it to its fullest extent, and should be glad for any one to tell me one item that I do not know respecting the digging of ground properly;" and if he really knows without preteuding, he is a valuable man, and oue to make and grow plenty to eat.

Every employer should encourage this art, and there ought to be a prize offered for the champion digger in every village.

FLOWER SEEDS.

H. CANNELL & SONS'

(F.R.H.S., M.S.A.)

Home-Grown Extra Choice Flower Seeds.

EXPRESSLY FOR PROFESSIONALS AND AMATEURS.

DIRECT FROM THE GROWERS TO THE SOWERS.

FOR PENNY PACKETS, see page 116.

NOVELTIES, &c., IN FLOWER SEEDS FOR 1894.

ARISTOLOGHIA ELEGANS.

FULL-SIZED PACKETS ONLY OF THE FOLLOWING

NOVELTIES, &c.,

CAN BE SUPPLIED.

Aristolochia Elegans—A beautiful free-flowering species of neat growth. The flowers are borne on long stalks, and have a slightly distended tube, which is bent upwards, the upper part dilated into a cordate cap-shaped limb of a rich dark purple colour, ornamented throughout with irregular branched markings of a creamy white, and having a golden-yellow eye surrounded by rich velvety purple. Its blossoms are produced in the greatest profusion, even on small plants, and are entirely free from the objectionable odour peculiar to the genus. Can be grown in the stove or warm greenhouse. Certificated by the Royal Horticultural Society. 1s. 6d and 2s. 6d. per pkt.

Antirrhinum—Queen of the North—Grows to a uniform height of one foot, elegant habit, and densely covered with large white flowers. Without exception the finest and most beautiful Sanpdragon ever seen, each plant will occupy a foot to 18 inches; a gem in herbaceons borders, and most useful for entring. 1s. per pkt.

Aster — Comet, Improved Giant White—The flowers of this novelty are much larger than the white varieties introduced a few seasons ago, the petals being much longer and broader. The centre of the flower is formed by a great number of fine golden-yellow florets, shaped in the form of a hair, after a few days they unfold to regular florets, and change colour to a pure white, so that a flower of eight days is pure white; the best Aster for show purposes. 1s. 6d. per pkt.

Aster- Comet, White with Rosy-Pink—A welcome addition to this class, the habit of the plant and shape of the flower is equal to those of any other colour. The flower is white with a delicate line of rosy-pink, later on the colouring becomes somewhat more intense; will become a general favourite. 1s. per pkt.

Aster Mignon { White, changing to lilac. White, changing to rose. } 1s, 6d, per pkt, each colour.

The above new varieties are both of incomparable delicacy and beauty. Flowers of three distinct shades of colour are borne at the same time by one plant; the blossoms on first appearing heing pure white; those half developed white, changing to lilae or rose; and, finally, the full-blown flowers are of a beautiful pure lilae or rose tint. Of heautiful shape, and most useful for pot culture and cutting purposes.

Aster Sinensis fl. pl. (Betteridge's Quilled)—Sulphury-yellow, a remarkably distinct variety of this free-blooming class. The flowers being globular, quilled, and very double, show the most clearly pronounced yellow yet seen amongst Asters. 1s. 6d. per pkt.

Begonia Erfordia—A new hybrid, between Schmidti and Semps. Vernon. The growth and graceful habit are similar to the former, while the colouring of the leaves resembles the latter. The flowers are of a lovely rosy-carmine, in loose clusters, and form a beautiful contrast to the dark foliage; it attains the height of about 12 to 15 inches. It is a splendid bedder, and also a good winter blooming variety. 1s. per pkt.

BEGONIA "FASHION."

Of this loveliest of all colours we had a 100-ft, house, with tubers planted out; these grew most vigorously, and it was, as hundreds said, a sight never to be forgotten. Its colour is of the most intense old gold,

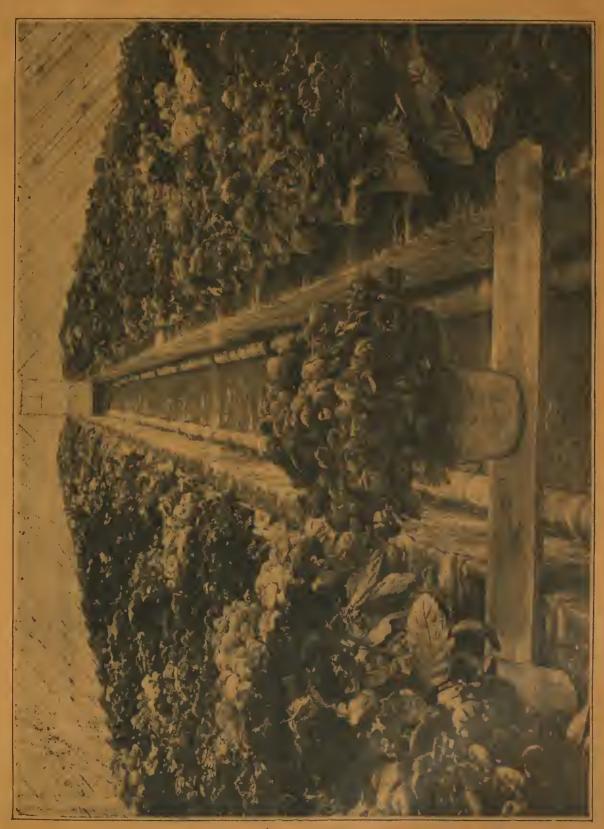

ASTER-COMET, IMPROVED GIANT WHITE,

interspersed with number, and a rosy-bronze shade near the centre, the colour so appreciated by all. Many of the flowers come with seolloped or fimbriated edges, the greater majority are smooth-edged, well-formed flowers. New colour not possessed by any other flower, more lovely than the Eschscholtzia, when seen in brilliant sunlight. Seed, 2s. 6d. and 5s. per packet; Tubers, 2s. 6d each, 25s. per dozen.

CARNATION, PERPETUAL FLOWERING.

Dianthus Caryophyllus Semperflorens fl. pl. ("Thérèse Franco")—Plant robust, compact and dwarf; the flowers are upright, perfectly double, very odoriferous, and unique in colonr—beautiful rose-satin, shaded silver, and flushed with salmon, occasionally striped and marked with pure white. The second huds fill out as large as the first, and the calyx never bursts. The great advantage of this Carnation is its admirable and abundant blooming qualities during the winter under frames or greenhouse. Can be highly recommended for cut flowers, and is destined to take a foremost place in all collections. Per pkt., 1s. 6d.

Campanula Specularioides—A charming dwarf new species, of uniform compact growth, only 4 inches in height. Flowers upright, well shaped, of unusual large size, and of a beautiful blue with white throat; useful for carpet bedding. Per pkt., 1s. 6d.

ALL FOR SEED.

A VIEW OF OUR CALCEOLARIA HOUSE, 100 FT, LONG.

Dhotonesh)

BEGONIA, CANNELLS, "FASHION."

Cineraria hybrida nana grandiflora atrosanguinea -The large and well-formed flowers of this new variety are of a very brilliant dark blood-red colour; yery compact and dwarf in growth.

CHAMÆPEUCE AFRA.

Chamæpeuce Afra-A splendid biennial from Armenia; it forms large rosettes of 30 to 40 prickly leaves of a dark green colour, veined beantifully with ivory-white. The flower stems are from 21 to 3 feet high, and well set with smaller leaves on the whole length; light purple flower heads in abundance; a stately ornamental foliaged plant. Per pkt., 1s. 6d.

Chrysanthemum, Japanese Early-Flowering Dwarf Varieties—This will be found a useful strain, growing only 1½ to 2 feet in height, and yielding during August and September an abundance of large flowers, and comprising the various colours and forms belonging to this section. The seed should be sown in February or March, and as soon as large enough to be handled pricked out into boxes or small pots, they will then flower the first year. Per pkt. 1s.

CHRYSANTHEMUMS, EARLY-FLOWERING JAPANESE.

Clematis Stanleyi-This remarkable species has been sent from the Transvaal, though shrubby in its native habitat in this country it proves to be herbaceous. The flowers vary in size, and are produced on drooping foot-stalks. Mr. W. Watson, of Kew, describing the plant in the "Garden," states, that he has seen six good flowers open together upon the same branch, each flower remaining fresh for about a fortnight. Their colour varies considerably from rich puce to rose and almost pure white, the beauty of the flower being much enhanced by the central mass of yellow stamens. They are followed by fruit terminating in long silvery, feathery awus, described as being as elegant as a bunch of Ostrich Plumes. When cultivated in the open ground, it will probably need some protection in Winter, such as bracken or beather. It will also probably succeed in pots of suitable size. Per pkt., 1s, and 1s. 6d.

Cockscomb, Vesuvius (Celosia cristata nana)—A very effective dwarf voriety, producing large perfectly shaped heads of a fiery-red colour on a golden-yellow ground; most useful for pot culture. Per pkt.,

Dahlia, Cactus-shaped Single-This new type has already among its admirers away of the leading horticultural authorities of the day. Their characteristic is the twisted or fluted petals, similar to those of the Double Cactus kinds. They are of graceful appearance, and the range of colour is quite as rich and varied. Per pkt., 1s. 6d.

We distributed last year a beautiful variety named Marguerite, and belonging to the above class, the flowers being pure white, with a slight yellowish tinge at base of florets; very useful for decorative purposes. We can supply young plants of this in May. 1s. 6d, each,

Dahlia, Fancy Single-Saved from a collection containing the most regular markings and distinct colours; generally white and yellow flowers, edged with nearly all colours peculiar to Dahlias. Per pkt, 2d.

SINGLE CACTUS-SHAPED DAHLIA.

DAHLIA, FANCY SINGLE.

Datura Cornucopia ("Horn of Plenty")—Introduced from the wilds of South America. The plant is of robust habit, and the leaves are large of a dark green colour. The flowers are trumpet shaped, measuring 8 to 10 inches in length and 5 to 7 inches across the mouth, and form three distinct flowers growing each within the other; the throat and mouth of corolla a most delicate French white, beautifully contrasted, and marbled with royal-purple on the outside; flowers are produced freely, followed by a large thorny sced-vessel, which adds to the beauty of the plant. It is of easy culture, and can be grown either in pots or planted ont at the end of May in a sheltered position and rich soil. We had several plants of it growing in our Nursery during the last Summer and was much admired. Per pkt., 1s. 6d.

Delphinium Armeniacum—A new and rare Asiatic species with brilliant blue flowers. It resembles in growth the Rocket Larkspur (Delph Ajacis), but is more compact, and produces a greater abundance of bloom. Per pkt., 1s. 6d.

ESCHSCHOLTZIA MARITIMA

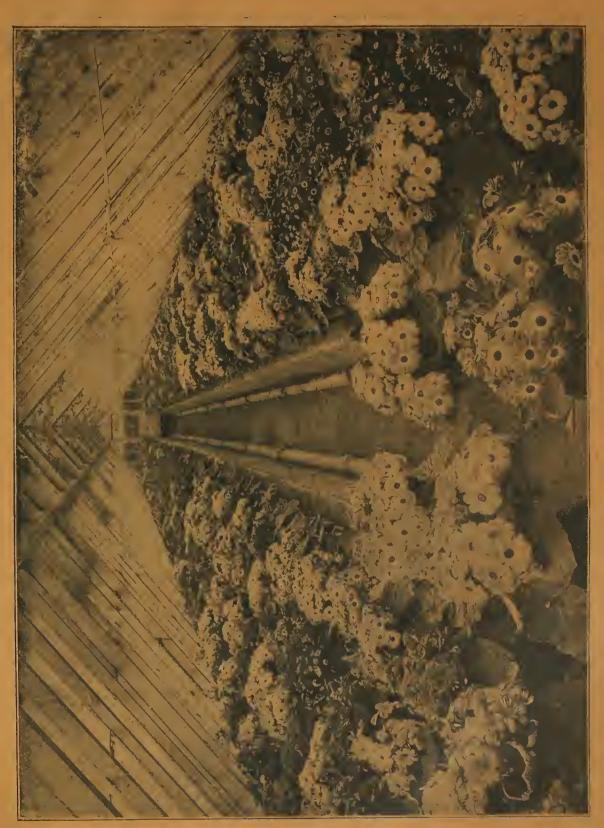

Eschscholtzia Maritima—This new Californian Poppy distinguishes itself essentially from the well-known Californica by its whitishgrey foliage and lighter coloured flowers. The latter are of a bright light yellow, with deep orange, and very distinct spots at the base of petals. I'er pkt., 1s.

Gazania Nivea—A species from Natal, growing at an elevation of about 0,000 feet. The leaves, generally 1 foot long, are narrow lineate, downy underneath, with broad ribs, which are white above and green below; flowers nearly two inches across, and are pure white; very free flowering. Per pkt., 1s.

Gerardia Tenuifolia—A beautiful half-hardy Perennial from Mexico. It forms branching erect bushes of 12 to 15 inches in height; narrow lineate foliage. The flowers, 1½ inches long, are of a light violet colour, with a soft lilac throat. When sown early will begin to bloom in July or August; fine plant for posts as well as for outdoor enlture. Per pkt., 1s.

Lathyrus Odoratus-See Sweet Pea.

Linaria Hendersoni ericoides—A new and compact variety; glaucous linear foliage, round upright bushes of about 8 to 10 inches in height, bearing numerous spikes of purplish-violet flowers; grown as an Aunual it is continually in bloom from July until the Autumn; as a Perennial it is perfectly hardy; valuable for dwarf groups, borders, or pot culture. Per pkt., 1s.

VIEW OF OUR CINERARIA HOUSE, 100 FT LONG.
All named varieties for Seeding from.
(From a Photograph.)

GERARDIA TENUIFOLIA.

LOBELIA, BARNARD'S PERPETUAL

Lobelia, Barnard's Perpetual—Said to be the finest variety yet raised; flowers are of a brilliant ultramarine blue, strikingly ornamented with pure white markings at the base of each of the two lower petals; of compact habit, useful alike for bedding or growing in pots; of a perpetual blooming character. Awarded a Certificate by the Royal Hortienltural Society. Per pkt., 1s. 6d.

Lobelia, White Ladie—This new bedding variety is quite distinct and pure white—the result of many years' selection—in form and habit similar to the universal favourite "Blue" Lobelia, of Crystal Palace fame. It is one of the continuous blooming kinds, not intermittent, as is frequently the case with some of the Pumila section; confidently recommended as a novelty of great merit; can be raised true from seed. It is white in seed. Per pkt., 1s. 6d.

Marigold, Dwarf French, Purple and Gold (Legion of Honour)—Grows quite regularly, and only about 1 foot high, and blooming in abundance from July until cut down by the frost. The single flowers are of a lovely golden yellow, with a broad velvety blotch on each

petal; of easy culture, and absolute resistance against dryness and insects; a valuable plant for any place in the garden wherever a decorative effect is required. Per pkt., 1s.

MARIGOLD, DWARF FRENCH, PURPLE AND GOLD.

Myosotis alpestris, "Jewel" White—Extremely large flowering variety of the semi-tall class, with large numbels of the purest white. Per pkt., 1s.

Myosotis dissitiflora, "Perfection"—Beautiful sky-blue flowers of double the size of those of the original species; the finest and best Forget-me-not for cut bloom. Per pkt., 1s.

Nemesia Strumosa Suttoni—This charming plant is one of the most beautiful Annuals introduced into cultivation for some years past. The colour of flowers are variable, being white oehreous, pale yellow, deep yellow, orange scarlet, magenta, earmine, &c. The variation in the colour of the flowers is one of the most interesting features of this plant. The seed should be sown in paus or boxes filled with light soil in March or April, and the plants put outdoors in May, they will come into bloom in June. Per pkt., 1s. 6d.

Petunia grandiflora fl. pl. Aurora- The flowers are of medium size and of a charming delicate rose colour veined with crimson-purple, thus making a very attractive combination. Per pkt., 1s. 6d.

Petunia "Giants of California" - A new strain. Most of the llowers are exquisitely fringed on the edges and are very large, often measuring 5 inches across. Some of the colours are rich and gorgeons, and others of lovely delicate shades; some have charming deep throats of yellow, white, black, green, or maroon, combinations quite new in Petunias; the flowers, moreover, are of great substance and very deep throated. A strain of incomparable beauty and luxuriance, and also remarkable in many respects. Per packet of the best varieties, mixed, 1s.

We can also supply the named hybrids of especial merit—Aurora.

Midnight, and Snowstorm. 1s. 6d, per pkt. ench.

Poppy, Grand New Double American Flag—A most beautiful double parony-flowered variety of robust growth, about 2 ft. high. bushy, and bearing freely large flowers 3 to 4 inches across; very double and charmingly colonred, pure white ground margined dark orange-searlet. Unlike most Poppies with two colours, one of which is obscure, in this variety the ground colour is plainly displayed, making an unusually effective combination. Per pkt., 6d.

CANNELLS' PRIMULAS.

A New and Novel Departure.

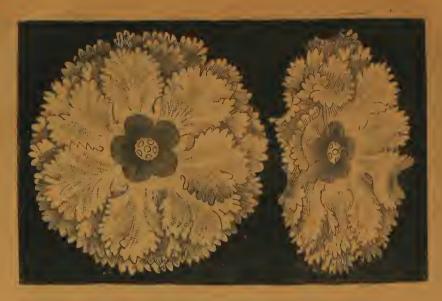

THE LADY,

Respecting the above New Primula, it is quite a departure. No doubt many will express their astonishment that after having devoted so much time and attention to perfecting the form and size of this useful class of plant, we should suddenly revert back, as it were, to the wild and original species—true but it is no more astonishing than the new Single Roses that have so many admirers, and again the Single Cactus Duhlias, which owing to their light and graceful forms adapt themselves for general decorative purposes, where double, large, well-formed, and heavy-looking flowers would be utterly nusuited.

This new variety is the beau ideal of gracefulness and elegance. The accompanying illustrations unfortunately do not fully convey its actual beauty—in fact, we donbt if it is possible to do so—it has an attraction peculiar to itself, and however much a person may be prejudiced against it at first sight, it ultimately claims their admiration. We have had several laugh at it when seeing it for the first time, but they have invariably asked to view it again before leaving our Nursery.

It has beautiful dark foliage and stems—when in a young state the leaves are almost a purplish-black colour—the foliage and stems being a most effective contrast to its pure white flowers and bright yellow centre. When in a group of half-a-dozen or more plants it has a most fascinating appearance on the dinner table as a pot-plant it is perfection, and when in a cut state, intermixed with a few fern fronds, it is the very thing required for table decoration; by occasionally changing the water it will be found to keep fresh and effective for a fortnight or more; the flowers do not drop so quickly as in other varieties of the Chuese Primula. Per pkt., 2s. 6d. and 3s. 6d.; smaller pkts., 1s. 6d

PRIMULA SINENSIS FIMBRIATA, EYNSFORD WHITE.

We have had the honour and pleasure of introducing a goodly number of really beautiful Primulas during the past fifteen years, which can readily be confirmed on searching through the reports of the leading gardening papers throughout the world.

During the year of 1893 we were in competition with all the best strains in commerce at the Chicago Exhibition, in which 400 packets of seed were sown, having been sent by no less than sixteen competitors, and from reports we have received, both private and public, we are proud to state that our varieties were decidedly the most admired and prominent amongst such a multitude. See Testimonials in Primulas, page 103. Our renowned varieties Cannells' Pink, Improvement, Lilacina, Swanley Blue, Swanley Giant, Swanley Purple, and White Perfection were amongst the most attractive.

Cannells' Eynsford White--Of the purest white, and highest quality flower; so overlapping are the petals that it resembles the outline of an immense double. Its funbriation is not approached by any other kind; habit good, and very free. Per pkt., 2s. 6d.

NEW PRIMULA, CANNELLS' WHITE.

Cannells' White- A decided improvement, and will undoubtedly commend itself as a first-class variety both for general purposes and exhibitions; it is of vigorous dwarf growth, and producing bold trusses of pure white flowers of great substance and size. Per pkt., 2s. 6d.

PYRETHRUM AUREUM CRISTATIM.

Pyrethrum Aureum Cristatum (Hurst) A beantiful curled-leaved form of the ordinary Golden Feather, and in colour equal to the best type of the original from which it has sported, whilst the leaves have the crisp appearance of the most exquisitely curled Parsley. Habit is extremely dwarf and compact, rendering it well adapted for carpet bedding, edgings, and similar purposes, it is, however, as might be expected from its dwarf habit and good colour, a shy seeder, as is the ease with all the extra good strains of Golden Feather. Per pkt., 1s. 6d.

Pyrethrum parthenifolium aureum crispum — The leaves are of a bright golden-yellow colour, and similar in form to the well-known Golden Feather, but distinguished from it, being beautifully earled and crisped. The plants are of strong, but dwarf, compact liabit. It cannot fail to speedily find its way into every garden. The Gardener's Chronicle states:—6 It is striking in appearance, and no doubt many who are eagerly on the look-out for novelties for bedding will give it a trial," Per pkt., 1s.

Ricinus zanzibariensis—The following varieties of Castor-Oil Bean, or Palma Christi, received from East Africa, represent an entirely new and distinct class. The plants attain great dimensions, presenting a splendid aspect with their gigantic leaves, which surpassed in size and beauty all the species and varieties known hitherto. The seeds also are very distinct, large, and of new and exquisite tints. The variety named above produces light green leaves of 2 to 2\frac{1}{2} feet across, with whitish ribs, and may in its general appearance be compared to a luxuriantly growing giant Aralia Sicholdi. Stem, branches, and the fruit are also of a light green colour. Seeds beautifully speckled carmine on delicate pink ground. Ornamental foliaged plants, of great effect for large groups or single specimens. Per pkt., 1s.

Ricinus zanzibariensis maculatus.—Equally handsome, and of the same large dimensions as the preceding variety, but differing by the colouring of the leaves, which are coppery-bronze, when in a young state, changing afterwards to a dark green with reddish ribs; stem and branches coppery-brown; seeds white, blotched brown. Per pkt., 1s.

Ricinus zanzibariensis cinerascens—Very large leaves of a brownish purple, changing into dark green with lighter ribs; stem reddish brown; seeds grey, speekled blackish brown. Per pkt., 1s.

Ricinus zanzibariensis niger—Feliage bronze, passing into dark green, with reddish ribs; stem light brown with a glaucous hue; seeds black. Per pkt., 1s.

Ricinus zanzibariensis mixed—The above four varieties equally mixed. Per pkt., 1s.

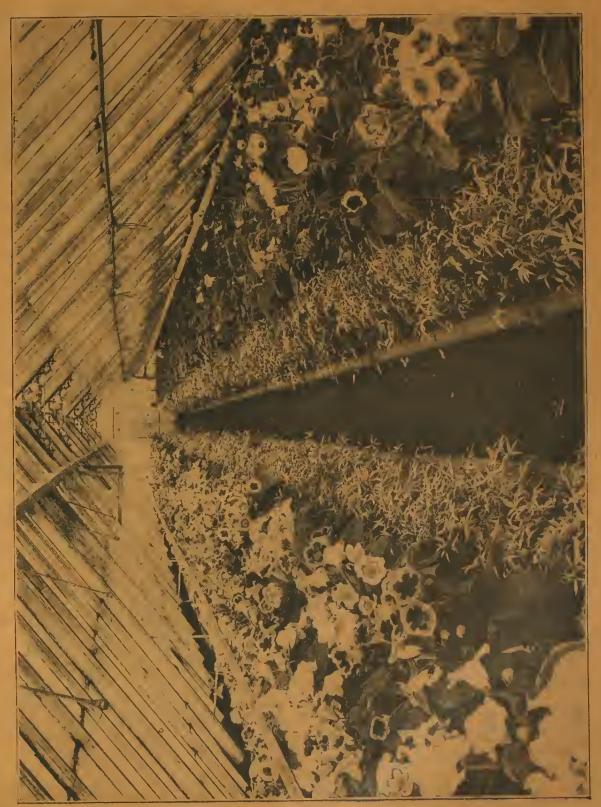

RICINUS ZANZIBARIENSIS.

ROSA (POLYANTHA) MULTIFLORA.

Rosa (Polyantha) Multiflora—Dwarf perpetual Rose, double mixed. A novelty amongst roses from the fact of its flowering the first year from seed, which if sown in February, planted out in April, will bloom from June throughout the summer and antumn. It grows about 1 foot high, and produces its semi-double flowers in graceful clusters and of various shades of colour. Per pkt. 1s.

A VIEW OF OUR GLOXIMA HOUSE, 100 FT LONG. (From a Phetograph.)

Seed, per pkt., 1s, 6d., 2s, 6d., and 3s, 6d.

Our Exhibit at the Great Temple Show was acknowledged to be the best ever seen in London.

SAINTPAULIA IONANTRA.

Saintpaulia ionantha—One of the most charming stove plants introduced of late years. It belongs to the family of the Gesneriaceas, and was found on the Usambara Mountains in East Africa by Mr. Saintpaul-Illaire. The tiny plants form a flat rosette of deep green hairy leaves, which are similar in form to those of the Gloxinia, but smaller in all parts, and most reddish brown underneath. The flower stems, 2 to 4 inches in length, are erowned by beautiful deep blue flowers, bearing a close resemblance in form, as well as in colour, to those of the sweet-scented violet; stamens deep golden-yellow. A well-established plant, will bloom continually throughout the year. The seed is extremely fine and requires similar treatment to that of the Streptocarpus. It is readily propagated by division of the leaves, but does not form a bulb, the roots heing of a fibrous character. Per pkt., 2s.

Sesbania Grandiflora—The gigantic and magnificent white flowers of this attractive plant are produced in racemes, it belongs to the Leguminosa, and is one of the largest flowering species known, each raceme has usually four of its immense flowers, which individually are about 3 inches long, the standard being ovate, wings long, and the calyx about three-quarters of an inch in depth. Introduced from West Australia, and is therefore well adapted for greenhouse or conservatory decoration. The plant has elegantly pinnate leaves. Per pkt., 2s. 6d.

SILENE, AMALIA.

Silene pendula nana compacta, Amalia—A regular, compact, semi-globular formed variety, 4 to 6 inches high, which is, during the time of flowering, densely covered with soft rose-coloured flowers in such a number that hardly the leaves are to be seen. Admirably suited for spring gardening, and very useful for beds or borders. Per pkt., 1s.

Stock, Princess May—Large-flowering pyramidal ten-week, originating from one of the finest types; very large flowers of good shape, and of the purest and most delicate light princese. The percentage of double flowers is far above the average, and the few singles being of the same tint as the double ones (which in other varieties are most white) are barely noticeable. The bold foliage is glossy green, wallflower-leaved, and shows off the delicate line of the flowers to the best advantage. Per pkt., 1s. 6d

SUNFLOWER, MILFLOWERED.

Sunflower, Lorenz's Milflowered—If planted singly in good soil this new variety reaches the enormous height of 12 to 15 feet, and is thickly branched from the base to the top, each branch bearing a multitude of medium-sized, golden-yellow flowers, with small black centre. The best place for this is to be planted singly on lawns, and for filling up vacant spaces in the garden no better material can be found. Per pkt., 1s.

Stock, Carters' Giant Winter Blooming—A white winter-flowering variety, which has always been in the forefront in Covent Garden Market. It matures with greater certainty, and in finer form than any other grown. Its spikes, both central and lateral, surpass all competitors. It has come with the grower 90 per cent., double, and its pure white flowers are invaluable from Christmas to Easter. The grower writes of it as follows:—"It is a cross between the ordinary Intermediate and East Lothian White. If sown in May in a cool frame and pricked off in small pots in a North pit, or outdoors in a shady place, it can be gradually forced into bloom by Christmas, or sown in July it will bloom at Easter if brought into a cool house and kept at 40 to 45 degrees. It does best on a cool bottom, and requires plenty of air. Per pkt., 1s. 6d. and 2s. 6d.

NEW SWEET PEAS.

Luthyrus odoratus.

THE QUEEN OF WHITE SWEET PEAS,

"EMILY HENDERSON."

A gloriously beautiful acquisition of American origin. Absolutely pure white, as clear as alabaster and as Instrons as satin. The flowers, of remarkable substance, are borne on long stiff pedancles, are extra large, with broad round standards that stand up boldly without reflex or curl.

The plants are robust, compact, and branching, producing such a prodigal abundance of flowers, that the plants uppear as if covered with snow. From one plant, specially cultivated, we have cut in one season the seemingly incredible number of 1,035 sprays of bleom.

In carliness it antrivals all competitors by nearly two weeks, and continues a veritable "cut and come again" to the end of Autumn. The fragrance is most delicious and distinct.

For foreing under glass it is particularly adapted.

Price, per pkt, (about 50 seeds), 6d.; per oz. (about 300 seeds), 2s.

EMILY HENDERSON

BRONZE KING

Bronze King—Amongst the numerous new varieties of Sweet Pens introduced of late years there is but the "Orange Prince." which has a slight resemblance in colour to this new variety. While the flowers of the "Orange Prince" are of bright rosy-orange, the standard of our "Bronze King," shows a perfectly distinct coppery bronze, the wings are pure white. Charming variety, reproducing itself true from seed. Per pkt., Is.

Lady Beaconsfield—Award of Merit. Salmon standards, tinted rose, the wings pale yellow; very distinct and beautiful. In scaled pkts., 2s. 6d.

Lady Penzance—Award of Merit. Pale, but very bright rose, very striking and distinct; a most chaste and lovely flower. In sealed pkts., 2s. 6d.

 $\mbox{Ovid}\mbox{--The Standards}$ and wings bright rose-pluk, margined rose ; a very pleasing flower, a great gern. In sealed pkts., 2s. 6d.

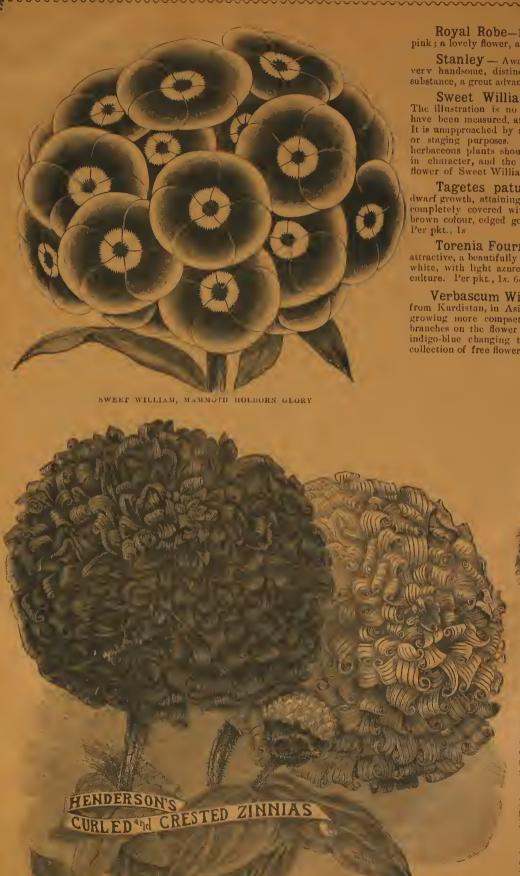

Peach Blossom—Salmon-pink standards, the wings soft pink very pleasing indeed. In sealed pkts., 2s. 6d.

PRINCESS MAY

Princess May—First-class Certificate Shrewsbury Floral Fete, August 18th and 19th, 1893. A most beautiful and distinct new variety, of which the colouring is throughout of a delicate shade of pale heliotrope or lavender, appearing in the bud state of rather a durker tint than when fully expanded. A most pleasing colour, and quite in accordance with modern and fashiouable tastes. Probably not since the introduction of Princess Beatrice Sweet Pea has there been raised a variety so distinct and effective in its colouring, and will doubtless be equally as much sought after and grown as that now popular variety. The flowers are large, and the wings and standard well expanded. The gardening Press have manimously spoken in high terms of this pretty and distinct novelty. Per pkt., 1s. 6d.

(509)

Royal Robe—Delicate pink standards, the wlngs soft blush pink; a lovely flower, an exquisite variety. In scaled pkt., 2s. 6d.

Stanley — Award of Merit. Deep maroon self, large, very handsome, distinct; beautiful flower of the finest form and substance, a great advance. In sealed pkt., 2s. 6d.

Sweet William — Mammoth Holborn Glory—
The illustration is no exaggeration, as many individual flowers have been measured, and which more than covered a penny piece. It is unapproached by any stock in cultivation for show, exhibition, or staging purposes. No collection of bienniais, perennials, or herbaceous plants should be without it. It is perfectly established in character, and the most perfect formed and largely developed flower of Sweet William in existence. Per pkt., 1s. 6d.

Tagetes patula nana fl. pl. Liliput — Of very dwarf growth, attaining but from 4 to 5 inches high, and being completely covered with small very double flowers; of a bright brown colour, edged golden yellow, useful for edgings and masses. Per pkt., 1s

Torenia Fournieri Grandiflora Cœlestina—Very attractive, a beautifully tinted variety of this lovely annual; flowers white, with light azure blue spots. To be recommended for pot enture. Per pkt., $1s.\ 6d.$

Verbascum Wiedemannianum—A magnificent species from Kurdistan, in Asia Minor. It is a very fine flowering plant, growing more compact than V. phaniceum, producing many side branches on the flower stems covered with blossoms of a plensing indigo-blue changing to lilac-purple. Valuable addition to the collection of free flowering perennials. Per pkt., 1s.

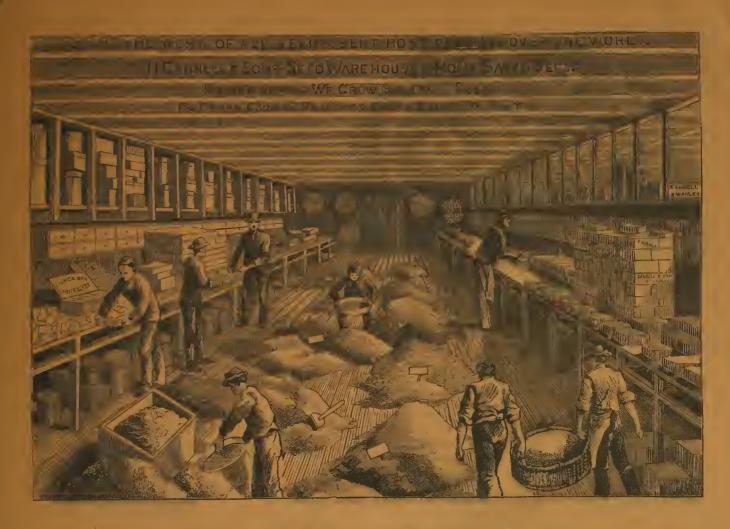

ZINNIA LILLIPUT.

Zinnia elegans fl. pl. Crispa. The Curled and Crested Zinnias-

The Curled and Crested Zinnias—These unique and charming kinds originated in America, and represent quite a new strain. The flowers are of perfect form, large and double, the petals being twisted, enried, and crested into the most fantastic contortions and graceful forms, rendering them entirely free from the stiffness which is characteristic of this family. Their case of culture, and their early and long continued bloom, will render them popular garden favourites wherever tried. Per pkt., 6d.

Zinnia Lilliput, Doubleflowered—A very dwarf and improved form of this interesting class of Zinnins. Per pkt., 1s.

Zinnia, Dwarf Double Striped
—The seed will produce 60 to 65 per cent.
of very fine striped or Zebra-marked tlowers,
whose range of colour includes a great variety
of very effective shades. Per pkt., 15.

---- GARDEN ANNUALS

These are all beautiful, and some levely. Many who bny and sow them never see their full beanty. Why? Simply because they have never had the following secrets of sowing and growing put plainly before them for their guidance.

First.—The situation must be open, free from shade, roots of trees and shrubs, &c., &c. It is astonishing how thick and far these roots extend, taking every bit of moisture and goodness out of the ground; the soil should be dug deeply, and if very poor, moderately manured; this done, it is no matter whether the seed is sown by making an indentation in the soil half-an-inch deep with the edge of a bit of wood, or rim of a pot, or any other contrivance. The seed must be covered with fine soil—the smaller the seed the finer and thinner the soil. Usually they come up like mustard and cress, and the thick green growth looks nice and cheerful. Now, the most remarkable part of the business for amateurs to understand—and understand they must—is to have nerve enough to pull nearly all of them np, almost in the same way as picking the feathers off fowls. The stumps, as it were, are almost enough to produce a crop, but more would be got out of the quarter left than if they were originally untouched. Such is a fact! We have only to look at the seed bed of Walliflowers, Sweet Williams, Cabbage, and Brussels Sprouts, and ask ourselves the question, and the secret presents itself plainly. Nearly all the annuals are better for being thinned or transplanted, if done at the proper time and in favourable weather; but to get at the exact distances, you really want to know to what size the plant attains when flowering. For instance, Virginia Stock, Nemophila, and such like varieties, 1 to 2 inches apart; Mignonette. Dianthus, Candytuft, 5 inches; Canterbury Bells and Marigolds, 1 foot; and so ascertain the size generally attained of any plants, and leave room accordingly; and it will be surprising how well you will succeed by letting them have sufficient room to develop their proper individual proportions, if not they are poor and puny, and in and out of bloom in short time. Thus ill is spoken of the plants, and the seedsman who supplied them.

n.n.a. Half-hardy Annual. F

Hardy Biennial.

Hardy Herbaceons.

HARDY ANNUALS may be sown from February till the end of September; March. April, and May are the best months for general summer display; June and July for antumn blooming; Angust and September for for spring flowering. Half-hardy Annuals—Sow from the beginning of March to the end of May; place in a frame on a gentle bottom heat. When sowing from the middle of April to the end of May they may be easily raised without artificial heat, and by selecting a warm, sheltered situation, and covering them with a hand-light till they are strong enough to bear transplanting.

BIENNIALS AND PERENNIALS-The most select and tender varieties for summer and autumn blooming may be sown in a gentle heat in March and April, and pieked out into pots until fully established, and theu potted off singly, or transplanted into the open ground, as required. The hardier varieties may be sown in the open ground, in prepared beds, in June and July, and when strong enough, transplanted to where they are intended to bloom the following year.

HERBACEOUS PLANTS are those Perennials which lose their stems aunually, whilst the roots continue alive in the ground.

11.11.A. Abronia Umbellata (Nyctaginaceee)—Delicate rose colour; a beautiful dwarf trailer. 3d. per pkt.

H.H.SH. Abutilon (Malvacea)-Saved from onrs, the finest collection of hybrids ever brought together, containing the most beautiful and varied colours. Very showy, decorative, and free-growing shrubs, both for the greenhouse and outside culture during the summer and antumn. 6 ft. high. 1s. per pkt.

n.n.sn. Acacia (Albizzia) Lophantha (Leguminosa)—A fine, fern-like foliage plant for greenhouse or window decoration. 6 ft. 3d. pkt.

H.H.SH. Acacia-Choice, mixed, decorative plants, with pretty foliage. 6d. per pkt.

H.P. Acanthus Mollis Latifolius (Acanthacew)—Large, handsome foliage. 3 ft. 6d. per pkt.

н.н.а. *Aeroclinium Grandiflorum Atroroseum (Compositæ), Everlasting—Very large flowered; dark. 1 to 2 ft. 3d. per pkt.

H.H.A. *Acroclinium Album-White flowered; very beautiful. 13 ft. 3d. per pkt.

*Acroclinium Roseum Flore Pleno-The densely double thin.A. "Acroelinium Roseum Flore Pieno—the densely double flowers are faultless both in shape and colour. On first unfolding, the flowers show a charming rosy hue, fading to a delicate pink at a later stage. A great advantage lies in the flowers having less tendency to close in damp weather than the single kind. 1\frac{3}{4} ft. 6d. per pkt.

* Flowers of these should be gathered before they are fully opened, so as to secure a bright centre when dried.

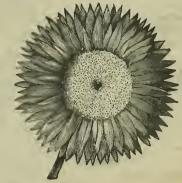

H.A. Adonis Æstivalis (Ranunculacear), Flos Adonis—Has bright crimson flowers protrading from finely cut dark green foliage. I ft.

H.A. Adonis Autumnalis (Pheasant's Eye)—Crimson; flowers in autumn. 1 ft. 3d. per pkt

H.P. Adonis Vernalis—Flowers 2 in. across, of a bright yellow colour; charming for flower-border and rockery decoration in spring. $\frac{3}{4}$ ft. 3d. per pkt.

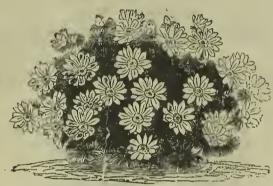

ABUTILON

ACROCLINIUM GRANDIFLORUM ATROROSEUM.

ACROCLINIUM ROSEUM FLORE PLENO

ADONIS VERNALIS.

H.H.A. Ageratum (Composite), "Cannells' Dwarf"—The best of all the dwarf blues. ½ ft. 3d. per pkt.

H.H. Ageratum, "Swanley Blue"—Dwarf. ½ ft. 3d. per pkt.
H.H.A. Ageratum, Imperial Dwarf White—½ ft. 3d. per pkt.
H.H.A. Ageratum Mexicanum—Useful for large beds; blue;
1½ ft. 3d. per pkt.

H.A. Agrostemma Cœli-Rosa (Caryophyllacew).—Dwarf, fringed; very pretty. 1 ft. 3d. per pkt.

AGROSTEMMA CŒLI-ROSA.

AMARANTHUS MELANCHOLICUS RUBER.

H.F. Agrostemma Coronaria (Rose Campion)—Pretty rose coloured. 2 ft. 3d. per pkt.

H.F. Agrostemma Coronaria Atrosanguinea—Flowers large, deep erimson. 2 ft. 3d. per pkt.

Agrostis-See Ornamental Grasses.

H.H.A. Alonsoa Linifolia (Scrophulariacew)—Showy flower; bright scarlet. 1 to $1\frac{1}{2}$ ft. 3d. per pkt.

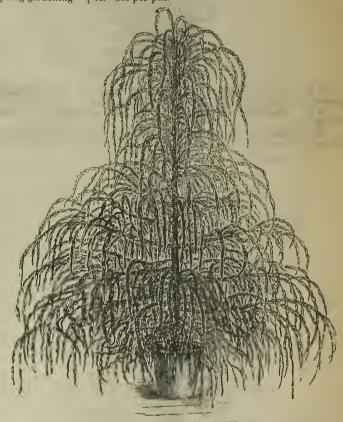

H.H.A. Alonsoa Albiflora—White. This will be found useful for pot culture in the conservatory, producing a succession of flowers during the Autumn and Winter. $1\frac{1}{2}$ to 2 ft. 3d. per pkt.

11.H.A. Alonsoa Warscewiczii—Bright searlet flowers, for heds or borders. 2 ft. 3d. per packet.

n.H.P. Alstræmeria Aurantiaea—Golden orange, streaked with red; fine for cutting. $1\frac{1}{2}$ ft. 3d per pkt.

H.A. Alyssum Maritimum (Crucifera). Sweet Alyssum—Flowers white; if sown in elumps it has a very pretty effect. 3 ft. 3d. per pkt.

H.P. Alyssum Saxatile—Yellow; suitable for the rockery and early spring gardening 3 ft. 3d. per pkt.

AMARANTHUS SALICIFOLIUS.

H.A. Amaranthus Caudatus (Amaranthaceee), Love-lies-Bleeding—Exceedingly graceful, free-dowering, ornamental plant, 2 to 3 ft.; red. 3d. per pkt.

H.A. Amaranthus Caudatus-White. 2 ft. 3d. per pkt.

Amaranthus Globe, see Gomphrena.

H.H.A. Amaranthus Tricolor (Joseph's Coat)—Dwarf, leaves marked with scarlet and rich bronzy purple; beautiful foliage. 1½ ft. 3d. per pkt.

H.H.A. Amaranthus Melancholicus Ruber—A compact growing variety, with large shaded crimson leaves; useful for bedding. I to 1\frac{1}{2} ft. 3d. per pkt.

H.H.A. Amaranthus, "Princess of Wales" — One half leaves are intense earmine with olive-green tips, the remainder orange-yellow beautifully veined with pink; splendid plants for table decoration. 3 ft. 1s. per pkt.

н.н.а. Amaranthus (Hybrid) "Henderi"— Graceful habit, hrilliant colours, gives a striking effect. 2 ft. 1s. per pkt.

H.H.A. Amaranthus Salicifolius (The Fountain Plant)—One good plant will repay all trouble. For heds, ribbon borders, or decoration of the conservatory. 3 ft. Sow early in March. 3d. per pkt.

H.H.P. Ammobium Alatum Grandiflorum (Composite), Everlasting—Flowers pure white. of a small rosette shape, reminding one of the old Bachelor's Buttons. It is of a very easy growth, and of great value for cut flowers all the winter. 1½ to 2 ft. 3d. per pkt.

H.P. Anchusa Italica (Braginacea)—Deep blue of easy culture, preferring a sunny situation. 3 to 4 ft. 3d. per packet.

H.P. Anemone Coronaria (Ranunculaceae)—Mixed. ½ foot.

3d. per pkt.

H.P. Anemone Fulgens (Scarlet Wind Flower)—Graceful habit; flowers beautiful bright scarlet. 3 ft. 1s. per pkt.

Angel's Trumpet-See Datura.

Cannells' Antirrhinums.

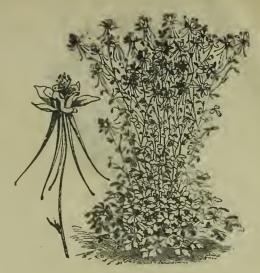

H.P. Antirrhinum (Scrophulariace), Snapdragon - Handsome free-Nowering border plants, decorative the first season when sown early. These are from our best varieties, and it is impossible to find a more distinct selection. The greater part of them are beautifully striped. 2 ft. 6d. per pkt.

Varieties to colour can be supplied, 3d. to 6d. per pkt.

H.P. Antirrhinum Tom Thumb-Perfectly distinct from the above, the flowers are not quite so large, but their dwarf stiff growth and shiay foliage, with masses of blooms, renders them exceedingly attractive.
to 1 ft. 6d. per pkt.

CANNELLS' SELECTED COCKSPUR AQUILEGIAS.

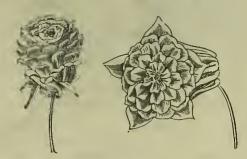

- H.P. Aquilegia (Ranunculaceae)-Finest Hybrids, mixed. 1s. per pkt.
- n.r. Aquilegia Vulgaris-Mixed (Columbine). 3d. per pkt.
- H.P. Aquilegia Skinneri-Red, with tips of the petals golden yellow; grows 2 to 3 feet high. 1s. per pkt.

AOUILEGIA CHRYSANTHA.

H.P. Aquilegia Chrysantha—Beantiful yellow, very useful for cutting. 2 to 3 ft. 1s. per pkt.

H.P. Aquilegia Corulea Hybrida—The flowers are large and well opened, the centre petals clear sulphnr-yellow, and the spurs and sepals a charming shade of pale blue; foliage very handsome; it is perfectly hardy, and grows well in almost any soil. 2 ft. 1s. per pkt.

DOUBLE AQUILEGIAS.

H.P. Aquilegia Californica Hybrida—Flowers large, the centre petals are yellow, and torm a marked contrast to the deep orange red of its sepals and spurs. 2 ft. 1s. per pkt.

H.P. Aquilegia Glandulosa (Grigor's Variety)—Tips of petals white, sepals dark blne, large blooms, plant $1\frac{1}{2}$ to 2 feet high; one of the most beantiful of this family. 1s. per pkt.

m.p. Aquilegia Grandiflora Alba—Fine pure white flowers; one of the best for cutting. 2 ft. 6d. per pkt.

H.P. Arabis Alpina (Crucifere)— Λ beautiful, hardy, miniature-growing plaut, and for permanent edging or spring bedding one of the best plants in cultivation; flowers white. $\frac{1}{2}$ ft. 3d. per pkt.

G.s. Aralia Sieboldii (Araliacew)—Handsome, ornamental foliage plant. 3 to 6 ft. (New seed ready in April.) 1s. per pkt.

H.P. Argemone Grandiflora (Papaveracea)-Large, white, daisyshaped flowers; may be sown in borders in April. 2 ft. 3d. per pkt.

H.A. Argemone Mexicana (Devit's Fig)-Yellow. 2 ft. 3d. per

n.n.a. Arnebia Cornuta—Rich Lyellow flowers, with fine large black spots; the latter changes colonr, and the whole flower becomes a pure yellow. 2 ft. 1s. per pkt.

H.P. Asperula Odorata (Woodrnff)-White, sweet-scented flowers, dwarf; thrives well in the shade. 3d. per pkt.

Asperula Azurea-setosa-Rosy-blue; a free bloomer. 1 ft. H.A. 3d. per pkt.

CANNELLS' ASTERS

(Compositæ).

JEWEL.

COCARDEAU, OR CROWN.

VICTORIA WHITE.

THESE ARE UNIVERSAL FAVOURITES.

Sow Aster seed in February and March in pots, or on a spent hot-bed in drills, Sow Aster seed in February and March in pots, or on a spent hot-bed in drills, 4 inches apart. When the plants are I inch high prick out into a cold frame, or under hand-glasses, 3 to 4 inches apart, from whence they can he planted out when 4 inches high. Select showery weather for planting, when the ground is in good working order; plant out in rows 1 foot apart each way. To grow Asters to perfection a rich deep soil is indispensable, and during dry weather they should be watered, and a top-dressing of well-rotted manure applied early in August. Be very particular that they are always thoroughly free from insects when they are planted out, otherwise the leaves will become carled, and vigour and protection lost for the season. If required for exhibition the buds should be thinned, and the plants well watered with liquid manure. During the last fortnight cover with glass.

Rall on Level Pumples violet. Another exceptionally fine colour to

FOR NOVELTIES SEE COLOURED PAPER.

Ball or Jewel, Purple-violet—Another exceptionally fine colour to this short-petalled class of Peony-flowered Asters which have already attained such great popularity. Per pkt. 1s. 6d.

H.H.A. Cocardeau, or Crown—A very striking and distinct class, each flower having a white centre surrounded by rose, crimson, blue, &c. 1½ ft. Per pkt., mixed, 1s.

II.H.A. Comet Aster—Large and extremely double flowers, similar in shape to the Japanese Chrysanthemum. 1½ ft. Per pkt., mixed, 1s.

Comet, Indigo - Of the richest indigo-blue shade, this will form a welcome addition to the now well-known Comet class. Per pkt., 1s. 6d.

Comet, Peach Blossom—This will be appreciated as a valuable addition in this class. The flowers attain a diameter of 3 to 4 inches, are gracefully arched, and petals slightly twisted, a peculiarity which distinguishes this class, a beautiful and delicate tint; useful for bouquets and other decorative purposes. Per pkt., 1s. 6d.

II. N. A. Comet, White-Of medium height, the flowers are large. pure white; a useful variety for cutting. Per pkt., 1s. 6d.

H.H.A. Dwarf Bouquet—Best of the dwarf Asters, growing about inches; the flowers are all bi-colonred, small, flat-petalled, and very free. Exceedingly pretty, and makes very attractive beds; suitable for pot culture of t. Mixed. 1s. per pkt.

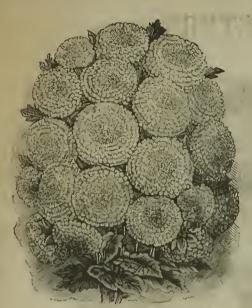

H.H.A. Emperor, or Giant Aster—Also a very fine class of Pyramidal Asters, bearing large flowers. The flowers frequently measure inches in diameter, much resembling shining satin. 2 ft. Mixed. 1s. 6d. per pkt.

H.H.A. Imbricated Pompone Aster—The colonring is precisely the same as that of the Dwarf Chrysanthemnm and Giant Emperor races. 1½ ft. Fine for bonquets. 1s. per pkt.

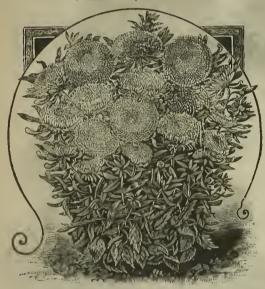

COMET ASTER

и.н.а. Improved Pæony Perfection Aster—The flowers combine the enormons size of the Giant Emperor Aster with the greatest perfection in form and doubleness of the Pæony class. The plants are of pyramidal growth. The yield of seeds is a very small one. 11 ft. Mixed colonrs.

DWARS ROBOLLET ASTERS.

CANNELLS' VICTORIA ASTER.

Jewel or Ball Aster—(1) Apple-blossom; (2) Deep Rose; (3) Rose with White—Three very handsome varieties of a new and magnificent class of Asters, obtained from the well-known large flowered Pasony Perfection tribe. Similar, but somewhat dwarfer in habit than the latter, it distinguishes itselfat first sight by its beautiful, shorter-petalled, and perfectly round flowers, which may be compared to the finest varieties of the incurved class of Chrysanthemum. The plants attain a height of about 20 to 24 inches; the fully developed flowers, measuring from \$2\frac{1}{2}\$ to 3 inches across, are as round as a ball, and, being horne on long stalks, they will prove very useful for cutting and bunching. Each colour separate. Per pkt., 1s. 6id.

Mignon, Hortense Red—Of the greatest value for use in the late autumu. A last sowing in June will bring in the flowers of this excellent variety in the months of October and November. Per pkt., 1s. 6d.

H.H.A. Pure White Victoria—All are, we presume, fully aware that the ordinary mixed colours of the Victoria variety are the most prized by growers of all the Asters. We need hardly say the value of a hed of pure white of this kind will at once be seen; we have much pleasure in offering this to our customers. 1½ ft. 1s. and 2s. per pkt.

H.H.A. Triumph Aster, Deep Scarlet—The most perfect and beautiful of all Dwarf Asters. It forms an entirely new class, reproducing itself true from seed, attaining a height of hnt 12 inches. The colour is peculiarly rich and brilliant; when beginning to bloom it is a pure searlet,

IMPROVED PÆONY PERFECTION ASTER.

but when in full bloom it changes to a magnificent satiny deep searlet, presenting thus, with these two brilliant colours, a lovely sight. It is well adapted for heds, groups, earpet bedding, or potentiare. Per pkt., ls. 6d.

n.H.A. Victoria Aster—The finest variety in enlitivation, and for exhibition purposes unequalled. Flowers perfectly double, imhricated, globnlar, and as large as the Giant Emperor Aster. Each plant on an average produces from six to eight flowers; habit very rohnst. Mixed. 1s. per pkt.

H.H.A. Victoria Aster Dwarf—A very dwarf class of the preceding A snitable variety for pots, $1\frac{1}{2}$ ft. Mixed. 1s, per pkt.

Victoria Needle, or Hedgehog-Pure white; a splendid introduction to this class, and will be found of great use. Per pkt., 1s. 6d.

Washington Aster-Extra fine varieties for exhibition. $1\frac{1}{2}$ ft. Mixed. 1s. per pkt.

H.H.A. English Quilled, or Globe.

The guard petals sit regularly round, and are thickly quilled, with very high centres; for size and shape they are superior to those usually seen at exhibitions. It is well known to all lovers of this class that if home-grown it is superior to that imported. Our large Aster bed in September is generally the finest seen in England. 1½ ft. Mixed, 1s. per pkt.

н.н.а. Shakespeare Aster.

Distinct kind, prettiest of all Dwarf Asters, the plants forming a compact bash of 6 to 10 inches in diameter and only 9 inches high, producing extra double well-imbricated flowers. Very valuable for pot culture, edgings, and groups; extremely free blooming, and keeps in flower till the frost sets in. The finest colours mixed, 1s. per pkt.

H.H.A. Queen of the Market Aster, White.

A capital Aster for cutting purposes, blooming quite three weeks earlier than any other kind. $1\frac{1}{2}$ ft. 1s. per pkt.

и.н.а. Humboldt Aster.

A very elegant and large Pæony flowering variety of this much-admired section of Asters. They are, by their graceful growth, free blooming, and extremely showy qualities, well adapted for groups. 12 inches high-Mixed, 1s. per pkt.

H.H.A. Dwarf Chrysanthemum-Flowered Aster.

Can scarcely be too highly recommended, dwarf compact growth; large, beautifully shaped flowers, very suitable for bedding, and marginal belts to other tall varieties. 1 ft. Mixed colours, 1s. per pkt.

H.P. Aster Perennial (Composite), Michaelmas Daisy—From a splendid collection; sown early they will flower the same year. These are most neeful for all kinds of decoration, and are also quite the fashion. From 2 to 6 ft. Sow in heat. Mixed, 1s. per pkt.

For collections of plants of Perennial Aster, see Floral Guide.

FIELD OF ASTERS.

ASTERS (MICHAELMAS DAISIES).

AUBERGINE (EGG PLANT).

Handsome fruit-bearing annual, fine for table decoration. Sow in heat in March, pot off in rich soil; the chief thing is to keep them thoroughly free from insects. 2 to 3 ft. Mixed, 3d. per pkt.

SEEDLING.

ALPINE.

н. P. Auricula. Handsome favonrite hardy perennials.

H.A. Bartonia Aurea (Loasacee) — Cup-shape flowers of a bright golden yellow, the centre resembling a bunch of fine yellow silk, foliage blue-green; very pretty. 1 ft. 3d. per pkt.

Auricula, Cannells' Finest Prize Show Varieties.

½ ft. 2s. 6d. per pkt.

Alpine. ½ ft. 1s. per pkt.

BEET, ORNAMENTAL FOLIAGE (Dracana-leaved).

un Beta Chiliensis (Chenopodiacece) - This magnificent variety is admired by all who visit our Nursery. The gorgeous colouring of its broadstemmed foliage cannot fail to render it a most effective plant either for borders or shrubbery. 3d. per pkt.

H.n. Lee's Belvoir Castle-A dwarf compact-growing Beet, with intensely dark purple glossy leaves, the best variety for flower garden decoration; the root also is excellent, being deep red.

BALSAM, CANNELLS' PERFECTION.

Cannells' Balsams

(Impatiens Balsamina Camellia flore).

H.H.A. BALSAM, CANNELLS' PER-FECTION - Onr house of these when in bloom is a grand sight. 2 ft. ls. per pkt.

H.H.A. Dwarf Camellia-Flowered Balsam-Imbricated double, large flowered. Lilac, rose, vermilion, pale lilac, bright rose; all colours. Mixed. 2 ft.. 1s. per pkt.

BALSAM, CAMNELLS' PERFECTION

Onr 100-feet house was the finest sight of Balsams ever seen, and the many visitors to our "Home of Flowers" pronounced them grand, being so very double; but considering the number of plants grown, the crop of seed yielded is very limited.

Sow in March, in pans, and place on a brisk hot-bed. When the young plants are np, pot off into 3-in. pots, shifting into larger size as they appear to require it, 6 and 8-inch pots being sufficiently large for the last shift. The soil best suited is half good strong loam, and half rich rotten manner and leaf mould. A moist and genial atmosphere in a cold frame, expose fully to all the light and air at all favourable opportunities, and as soon as the soil becomes exhausted let them be well supplied with liquid manner twice a week, for it is impossible to grow them good without it.

CANNELLS' TUBEROUS BEGONIAS (Begoniaceae).

WE WERE AWARDED THE ONLY SILVER CUP EXCLUSIVELY FOR BEGONIAS AT TEMPLE SHOW, 1893.

Our Begonias are lovely indeed. Ten Houses, 100 feet each, filled with the choicest of the choice. Colours so wide, deep, varied, and brilliant together with their short stiff growth and freeness in flowering, shows a marked development and advance on the ordinary strains. Our two acress out of doors, consisting of at least 200,000 plants, were all the season the grandest sight ever seen in this family. Our New Crimson Scarlets are a surprising advance. These, together with all our other trials of all the hest flowers and vegetables, is a great hortienltural treat, and should be seen hy all so as to ensure success for next season.

EXTRACTS FROM GARDENING PAPERS:-

"There are several large houses full of Begonias; indeed, the stock of plants is enormous. The varieties are, moreover, as remarkable for their fine quality as for their number. There are thousands of large, healthy plants of the hest type—compact, with large substantial foliage and vigorous stems that carry the flowers well clear of the leaves. Swanley is ahead of the times with Begonias as it is with other things. The hest strains producible or procurable

"Mr. Cannell's literal home of flowers, where just now, excelling all others, the Begonia presents, not only outdoors but in house after house, a spectacle so beautiful and extensive as to almost take one's breath away and lead to wonder, after the Begonia has satiated us, what other flower can possibly hope to excell or succeed it. Others may, indeed, have grand collections of Begonias, but at least Mr. Cannell has just now one of the finest and most brilliantly heantiful collections, in wondrous variety of colour, both double and single, ever seen.'

Frequent trains from London. Entrances from the stations. All lovers of the hest Flowers and Vegetables are cordially invited. No horticultural establishment is filled with such an amount of interesting objects as ours at all seasons. SEND FOR A CATALOGUE.

(See Outside of Cover.)

CANNELLS' GRANDIFLORA SINGLE BEGONIAS. All colours mixed, saved from the newest and best sorts, all one quality; in sealed packets, with full directions. per pkt., 1s., 2s. 6d., 3s. 6d., 5s

Seeds sown 1st February. Plants Photographed early in August.

CANNELLS' DWARF GRANDIFLORA SINGLE STRAIN.

Cannells' Perfect Strain of Begonia Grandiflora, Single-In sealed packets, with full directions for sowing and treatment.

In separate colours, per pkt., 1s., 2s. 6d., 5s., and upwards.

Amber, Blush-White, Buff, Crimson, Orange,

Orange-Scarlet. Picotee. Pink. Pink and White. Primrose. Red. Salmon. Scarlet. White (the purest) Yellow.

Packets, mixed from the above, all one quality, and saved from the finest varieties in existence, 1s., 2s. 6d., 5s.

Seeds sown 1st February. Plants Photographed early in August.

CANNELLS' DWARF GRANDIFLORA DOUBLE STRAIN.

Cannells' Perfect Strain of Begonia Grandiflora, Double—Saved from ours, the finest collection in the world. Awarded Gold and Silver Medals, Gold Clocks, Silver Cups, and innumerable First Prizes throughout the globe. Per pkt., 1s., 2s. 6d., 5s., and npwards, according to quantity required.

Full particulars, see New Plants and our General Collection in Floral Guide.

Scatter the Seed on a level, moderately-firm surface, cover with glass and paper, keep it in darkness until germinated; sow and place in heat at any time of the year, or as soon as the seed is ripe; pot the young seedlings off as soon as large enough, and re-pot when necessary; in three or four months they begin to display their beautiful hlooms. For further particulars see Collection, Floral Guide.

BEDDING BEGONIA.

н.п.р. Bedding Begonia—Best varieties. Mixed, 1s. and 2s. 6d. per pkt.

н.н.р. Begonia Metallica—Splendid sort, with heautiful metallic foliage, and numerous brilliant rose flowers. 3 ft. 2s. per pkt.

H.H.P. Begonia Davisi—Bluisb-green foliage, producing ahundant flowers of brilliant scarlet. \(\frac{3}{4}\) ft. \(2s.\) 6d. per pkt.

н.н.р. Begonia Froebeli—This will be found very distinct, the flowers coming direct from the bulb; bright scarlet. 1½ ft. 1s. 6d. per pkt.

H.H.P. Begonia Semperflorens Mixed (winter flowering) — Containing Mr. Iggulden's variety. 1 ft. 1s. per pkt.

n.h.r. Begonia, Tuberosa Vittata—Striped flowered. The flowers are flaked and striped after the manner of the Carnation, even in the flower buds. From the seed offered sowers will obtain about 40 per cent. of plants with flowers more or less striped or rayed. Per pkt., 1s. 6d.

Begonia Semperflorens Atropurpurea (Vernon) — Similar in habit to the old and well-knowu Begonia Semperflorens, it surpasses the latter by far by its brilliant orange-carmine flowers, and by its glossy deep brownish-red foliage, the deep red tint growing in intensity as the season advances. The beauty of the male flowers is still enhanced by the bright yellow stamens, which contrast admirably with the brilliant red flowers and the dark metallic leaves. Blooming in the greatest profusiou throughout the summer and nutumn it cannot be too highly recommended for beds or for pot culture. Per pkt. 1s. 6d.

и.п.р. Begonia Rex—Ornamental-leaved varieties saved from the choicest. 1 ft. 2s. 6d. per pkt.

n.H.P. Begonia Weltoniensis — One of the perpetual-flowering and evergreen varieties, with small light rose flowers and bright green foliage. 1½ ft. 1s. per pkt.

H.P. Bellis Perennis fl. pl. (Double Daisy). 1 ft. Mixed, 6d. per pkt.

Bellis Perennis fl. pl. Maxima (Giant Daisy)—Produces beautiful and densely imbricated flowers of an unusual size, measuring from 14 to 2 inches in diameter, and varying in different red tints. Per pkt., 1s.

BELLIS PERENNIS MAXIMA FL. PL.

BEGONIA SEMPERFLORENS ATROPURPUREA

H.P. Bellis Perennis fl. pl. "Longfellow"—Comes true from seed, producing dark rose flowers of nusual size and doubleness, having flower-stalks of great length and stiffness, thereby rendering the flowers of considerable value for houquets. \(\frac{1}{4}\) ft. 1s. 6d. per pkt.

Blanket Flower, see Gaillardia.

Blue Bottle, see Centaurea cyanus.

Bouncing Bet, see Saponaria calabrica.

и.п.A. Brachycome, Iberidifolia (Compositae), Swan River Daisy—One of the prettiest of summer annuals; blue Cineraria-like flowers. 1 ft. 3d. per pkt.

H.H.A. Browallia Elata Grandiflora (Scrophulariacea)—A pretty decorative plant for the greenhouse or conservatory; bright blue. $1\frac{1}{2}$ ft. 6d. per pkt.

H.H.R. Browallia Elata Alba—Pure white flowers; useful. 1½ ft. 6d. per pkt.

Briza, see Ornamental Grasses.

H.A. Cacalia Coccinea (Composite)—Very showy border annual; flowers scarlet. 1 ft. 3d. per pkt.

H.A. Cacalia Aurea (*Lutea*)—Yellow. 1½ ft. 3d. per pkt. Calampelis, see Eceremocarpus.

H.A. Calandrinia Grandiflora (Discolor) (Portulacea)—Large rose-coloured flowers. 1 ft. 3d. per pkt.

H.A. Calandrinia Speciosa-Purple. ½ ft. 3d. per pkt.

H.A. Calandrinia Speciosa Alba-White. 1/2 ft. 3d. per pkt.

Half-packets at half price of all Flower Seeds where priced 1s. and upwards, except collections and novelties.

For Penny Packets, see page 116.

A Photographic View of our Exhibit at the Begonia Conference at Chiswick. 50 feet in length.

SILVER-GILT MEDAL AWARDED.

WAS AWARDED THREE SILVER MEDALS FOR GROUPS DURING 1893.

Tubers in the dormant state can be supplied from the end of October until March. After that date in plants.

Mr. A. Singleton, La Folie, Millbrook, Jersey, September 11th, 1893. Single and Double Begonias from your seed were grand. Have raised thousands, but none of them near the Swanley strain.

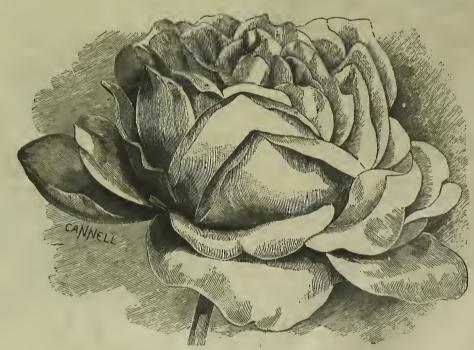

J. B. SEWARD, Esq., Hillside House, Ampthill, September, 1893. The Begonia seed I had of you in the Spring was good; 100 fine plants in full flower; the quality first rate.

L. Beddoes, Esq., Wyndham, Easton in Gordano, September, 1893.
Your Begonia seed turnel out well. I have a great number of seedlings which are grand.

Mr. G. Tomsett, The Gardens, English Bicknor, Coleford, August 2nd, 1893.
All your seeds have done well, especially Begonias and Verbenas.

Seed saved from the large-flowering best-shaped varieties only. They possess far better habit and freeness in blooming than any others ever offered, which is confirmed by the unanimous decision of nearly all the greatest experts and connoisseurs,

DOUBLE BEGONIAS.

Per packet, 1s., 2s. 6d., 3s. 6d., 5s., and upwards.

J. EVERETT, Esq., Colbury, Totton, July 31st, 1893.

Plants raised from your Calceolaria seed have bloomed well, and been greatly admired.

Mr. W. LITTLE St. Peter's Street, Tunbridge Wells, June, 1893.

I was awarded a First Class Certificate at Tunbridge Wells for 6 pots of Calceolarias raised from seed supplied by you.

We have been awarded more First-Class Certificates than all other firms put together. full particulars in Floral Guide.

OUR CALCEOLARIAS.

See Photograph of our House of Seedlings, Novelties in Flower Seeds.

Our house of these is a great feature with ns, and to hear the exclamations of the many visitors, "Why, I have never seen any like these hefore; they are flandsome," is quite cheering. The fact is, we have saved the seeds from the rarest colours, and really at first sight they appear to be a new family. Pray remember the crop of seed is considerably less from these uncalcolaria-like colours than from those where the colours are nearly all rellow, and flowers as long and as ugly as an old slipper.

n.n.e. Calceolaria—Shrubby, dwarf bedding varieties. $1\frac{1}{2}$ ft. per pkt. 1s. 6d.

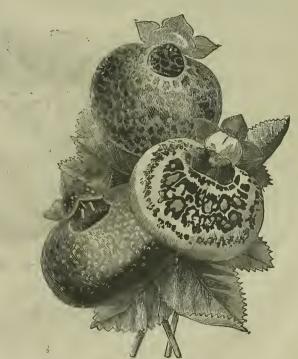

G.P. Calceolaria, Swanley Hybrid Dwarf Perfection (Scrophularinea). 2s. 6d. per pkt. Smaller pkt , 1s. 6d.

CALCEOLARIA, SWANLEY HYBRID DWARF PERFECTION.
ACKNOWLEDGED TO BE THE PINEST STRAIN IN THE WORLD.

The seed germinates best without heat, and should he sown in pans or pots, following the directions here given as nearly as possible what we praetice:—The pots to be quarter filled with drainage, over which place the rough siftings of the mould, filling up the pot with very fine soil, half of which should be composed of sand. When thus prepared, water through a fine rose, and carefully sow the seed, but do not cover it. Place the pots in a close and totally dark frame, or under a square of glass. The moment they show the seed leaf, gradually expose to the light, taking care to protect from exposure to the snn. When the seedlings are strong enough, prick them off into pans prepared as before, and placed in a similar position. From the store pans pot off singly, placing them in a cold frame or near the glass. The main thing is never to let them become dry, starved, and potbound; if so, the fly will attack them, and they will never make good plants. These directions apply to nearly all seedlings. The common error, and the cause of nearly all failures—the seed is sown too early. Plants become too large, and often for the want of either root or top room have to stand still,

as it were, and the moment the roots become stationary they go backward, and when so they become stunted, insects attack them, or yellow foliage sets in, and perfection is lost. Sow in August, and from the moment they are up do everything to keep them growing, and the faster the hetter. Rain water is absolutely nocessary. Let them be carefully shifted from the small pot to the 5-inch. Let the night temperature and moisture be such as to cause a nice refreshing dew to stand on the surface of the leaves every morning. This wards off insects and gives vigour to the plant, but it should be dispelled during the day by the admission of air. (See important cultural directions given for Cinemarias.) Keep them in a cold frame, with plenty of air and moisture at all favourable times. No frost must touch them. The grand secret is to keep all green fly away, and if coddled in a house, they are almost sure to he attacked. If so, the most effectual means must ho adopted by placing them in a lofty position and fumigating, as per directions given (see Guide); and at the very moment of the first curled leaf, every fly must be destroyed. As soon as the first root appears at the drainage hole, let them be shifted intact and without injury into their blooming pots, making sure that every pot is well drained, for no plant is more liable to become sickly and yellow in wet, sour soil than the Calceolaria. On the first signs of sharp weather, place in a honse near the glass, with temperature not above 50 deg., with plenty of moisture; and as soon as the pots become well filled with roots, give liquid manure once a week, and stake out and fumigate thoroughly just before they show flowers, and the result will be a grand sight. Some plants die off suddenly at the blooming time; this is generally caused by over watering. (See cultural directious for Primulas.)

THE FINEST STRAIN OF CALCEOLARIA IN THE WORLD.

H.A. Calliopsis (Coreopsis) Coronata (Tickseed) (Compositæ)—Yellow, brown spots; very pretty. 2 ft. 3d. per pkt.

H.A. Calliopsis Drummondi—Flowers yellow, with brown centre; one of the hest. 2 ft. 3d. per pkt.

H.A. Calliopsis Tinetoria (Bicolor)—Yellow and crimson; valuable. 3 ft. 3d. per pkt.

n.a. Calliopsis atrosanguinea—Dark crimson; attractive. 1 ft. 3d. per pkt.

н. A. Calliopsis Atkinsoniana—Orange-yellow, spotted brown in centre. 2 to 3 ft. 34. per pkt.

n.u.a. Callirhoe involuerata—Large purplish-erimson flowers. 1 $\frac{1}{2}$ ft. 3d. per pkt.

Calendula Officinalis Grandiflora Sulphurea fl. pl. — Of the improved compact growing pot-marigold, producing very large and extremely double flowers of a pleasing sulphur-yellow colour. Per pkt., 1s.

H.A. Calendula Officinalis fl. pl. "Meteor" (Compositæ)—A splendid variety, with large and beautifully imbricated striped flowers, the colours of a deep brown-orange on a pale straw-coloured, almost white, ground; the stripes are very striking, and of the greatest regularity. 1 ft. 3d. per pkt.

11.A. Calendula "Orange King"— This variety represents the highest possible perfection in the class of Double Calendula. The flower is faultlessly shaped, and of a very dazzling deep orange colour. 3 ft. 6d. per pkt.

и.л. Calendula pluvialls (Cape Marigold), very free-flowering, white. 1 ft. 3d. per pkt.

Californian Poppy-See Eschscholtzia.

II.P. Campanula Carpathica ($Campanulace\alpha$) — Covered with large erect blue flowers. $\frac{1}{2}$ ft. 3d. per pkt.

H.P. Campanula Carpathica Alba—Flowers white. ½ ft. 3d. per pkt.

Campanula Carpathica Pallida-Very pale blue; pretty. ft. 3d. per pkt.

H.P. Campanula Celtidifolia — Produces light blue flowers; blooms first'season. Gd. per pkt

н.г. Campanula Grandiflora (Plutycodon grandiflorum)—Large; blue flowers in autumn; effective. 2 ft. 6d. per pkt.

n.p. Campanula Grandiflora Alba-Flowers pure white. 2 ft 6d. per pkt.

Campanula Latifolia-This produces stout stems 3 feet high, bearing large blue flowers in great abundance. 6d. per pkt.

Campanula Medla Calycanthema-Blue. per pkt.

n.b. Campanula Media Calycanthema Alba — 2 ft. per pkt.

Two splendid showy varieties of Canterbury Bells, the calyx forming an elegant cup round the hase of the bell, and heing of the same heantiful colorr as the corolla. These varieties come quite true from seed.

H.B. Campanula Media (Double Canterbury Bells, Mixed). 2 ft. 3d. per pkt.

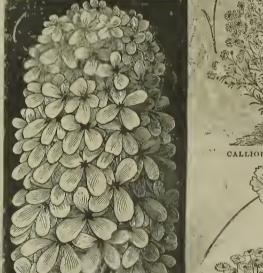

n.p. Campanula Pyramidalis (Chimney Campanula)—This when in hloom is very handsome; pale blue. 3 ft. 3d. per pkt.

n.a. Campanula Speculum (Venus Looking-Glass)-Blue; very pretty annual for borders, rockwork, &c. 3d. per pkt.

II.A. Campanula Speculum fl. Alba—White. 3d. per pkt.

H.P. Campanula, Turbinata - Flowers blue; dwarf. 3d.; per pkt.

u.r. Campanula Turbinata Alba-White. 1s. per pkt | 7 Canary Creeper-See Tropwolum.

HA. CANDYTUFT.

CANDYTUFT, EMPRESS.

CALLIOPSIS CORONATA.

Carnea-Flesh colour. 1 ft. 3d. per pkt.

Carnea—riesh colour. In. sa. per pkt.
Crimson—1 ft 3d. per pkt.
Empress—A splendid variety, producing pure white pyramidal trusses
on dwarf branches; very free. \(^3\) ft. 6d. per pkt.
Lilacea—Lilac. 1 ft. 3d. per pkt.
Mixed. \(^3d\) per pkt.
Pink—Qnite a distinct variety, pretty colour; should be grown in

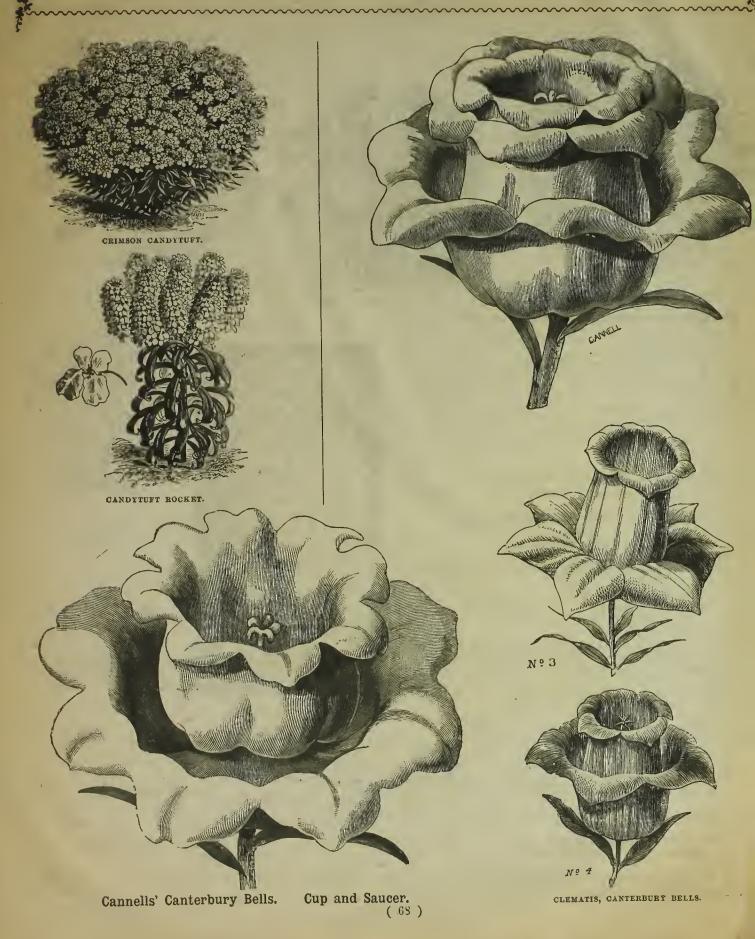

every garden. 1 ft. 6d. per pkt.

Rocket—White. 1 ft. 3d. per pkt.

Sweet Scented—White. 1 ft. 3d. per pkt.

White Tom Thumb—Very dwarf, good white. 3 ft. 3d. per pkt.

n.B. Cannells' Clematis Canterbury Bells—The greatest and most surprising novelties are our Canterbury Bells; their singularity of shape, which the illustrations truly represent, come perfectly true from shape, which the illustrations truly represent, come perfectly true from seed, and being quite hardy should be in every garden. Habit very dwarf, and so free that the whole plant, when in full flower, presents one surface of colour. Shape of flower extremely striking. Mixed, in several delicate and oleasing colours. 2 ft. 1s. per pkt.

Cannabis Gigantea (Cannabinaceae), Giant Hemp-A tall ornamental foliaged plant, useful for sub-tropical effect. 6 ft. 3d. per pkt. n.s. Canterbury Bells,: Cup and Sancer varieties, mixed-2 ft.

n.H.P. Cannas (Cannew), Indian Sbot—These give a very beautiful and tropical aspect to pleasure grounds, by their stately growth and broad, massive foliage, relieved by rich crimson-scarlet, orange, or yellow flowers during the late sammer months; their foliage, comprising various shades of rich green, glaucous, and chocolate-crimson leaf-tipts, fits them admirably for effective groups, their appearance rendering them a striking contrast to other

plants. They are also invaluable for large pot plants, as portable specimens in pleasnre-ground decoration, and equally so for summer groups in large conservatories, in which their great diversity of foliage appears to advantage, and they are very ornamental for any purpose, 3 to 6 ft. high. 6d. per pkt. Saved from the very best varieties, 1s. per pkt. For full collection of best named varieties that can be supplied as plants, see Floral Guide.

for our complete List of CARNATIONS, PICOTEES, and PINKS; also TREE or WINTER-FLOWERING CARNATIONS Send

Good strong healthy plants supplied of all the best varieties.

CARNATIONS AND PICOTEES.

The DOUBLE MARGARET CARNATION is a grand addition to this much appreciated flower.

The colours are mixed, sweet scented, and Plants may be had in bloom in about four months from the time of sowing seed.

most useful for cutting purposes.

PERPETUAL FLOWERING DWARF DOUBLE MARGARET CARNATIONS-TOM THUMB,

CANNELLS' CHOICE CARNATION.

Castor Oil Plant-See Ricinus.

H.r. Catananche Cærulea—Blue and purple, free flowering. 2 ft. 3d, per pkt.

H.A. Catchfly, Lobel's Red (Caroyphyllacew), Silene Armeria—Very showy, early flowering plant. 1 ft. 3d. per pkt.

H.A. Catchfly, Lobel's White. 1 ft. 3d. per pkt.

G.A. Celosia Plumosa (Amarantacew)—A very handsome, dwarf, bright crimson sort of the feathery Cockscombs, of regular pyramidal growth; well adapted for pot culture as well as for flower beds. 3 ft. 1s. per pkt.

G.A. Celosia Huttoni — Bright erimson, very effective. 2 ft. ls. per pkt.

G.A. Celosia Japonica—The branches, from the roots to the smallest leaf vein, are scarlet or erimson, the combs are almost as delicately cut as ruffled lace, often in pyramidal masses, while the colours are of the brightest description imaginable. 2 ft. 1s. per pkt.

G.A. Celosia Pyramidalis Aurea (Golden)-21 ft. 1s. per pkt.

G.A. Celosia Pyramidalis Coccinea-23 ft. 1s. per pkt.

H.P. Carnations, mixed. 11 ft. 2s. 6d. per pkt.

Perpetual Flowering Dwarf Double Margaret Carnations—Tom Thumb.—Herewith is offered an opportunity which cannot be excelled to every one who is in constant want of fine flowering plants. In growing these beautiful Carnations the greatest possible perfection has been obtained, and it is hardly likely they will ever be surpassed. They are most valuable for pot culture, bedding, groups, borders, &c., and will be highly appreciated by all lovers of the Carnation. The cultivation is quite simple, as they can be sown at almost any time of the year, but must be transplanted at once to the spot where intended to flower. If sown in March they require but very little more attention than many of the common summer flowers. Per pkt. 1s. and 1s. 6d.

Carnation Margaret White-Purc white. 1s. 6d. per pkt.

n.p. Cannells' Picotees and Carnations, mixed 2s. 6d. per pkt.

п.р. Cannells' Picotees, mixed. 1½ ft. 2s. 6d. per pkt.

H.P. Tree, or Winter Flowering Carnations, saved from the best varieties. 2 ft. 2s. per pkt.

Sow in June, and treat them like Calceolarias until September; after that to be kept in a cool frame.

For Collections of Carnation and Picotee. see page 53.

CANNELLS' CHOICE PICOTEE.

CELOSIA SPICATA ROSEA.

CELOSIA PLUMOSA.

CELOSIA JAPONICA.

G.A. Celosia Pyramidalis Versicolor — A tall feathery Cockseomb of several beautiful colonrs; if properly grown cannot fail to be appreciated. 6d. per pkt.

G A. Celosia Spicata Rosea-Crimson, with shaded maroon foliage. 2 ft. 3d. per pkt.

The above to be treated like the Amaranthus, only to be kept in pots, as they are more for indoor decorations.

H.P. Centaurea Clementei-Robust growing; white foliage variety. 2 ft. 1s. per pkt.

H.A. Centaurea Cyanus-The beautiful Cornflower, much used for floral decoration, bonquets, &c., mixed, containing, blue, pink, and white. 2 to 3 ft. 3d. per pkt. Pink and white in separate pkts. 3d. per pkt.

H.A. Centaurea Cyanus, Blue (Cornflower)-2 to 3 ft. 3d. per pkt.

Centaurea Cyanus (Victoria).-This charming variety of our garden Cornflowers is very dwarf, rarely exceeding 6 to 8 inches in height, and the plants form very pretty miniature globular bushes, which are profusely covered with dark blue flowers. 1s. per pkt.

н.н.р. Centaurea Gymnocarpa — Rose-parple flowers, silvery-white; pinnatifid foliago. 1½ ft. 6d. per pkt.

H.A. Centaurea Moschata Alba (White Sweet Sultan) - 1 ft. 3d. per pkt.

H.A. Centaurea Moschata Purpurea ($Composit\alpha$), Purple Sweet Sultan—1 ft. 3d. per pkt.

H.H.P. Centaurea Ragusina (Candidissima)—The best of the genns for bedding purposes, and a very valuable decorative plant for conservatory or other purposes; its large silvery white leaves form a fine contrast when groupod with other plants; as an ornamental bedding plant it is unequalled by any in cultivation with similar foliage. 1½ ft. 1s. 6d. per pkt.

н.а. Centaurea Suaveolens (Sweet Sultan)—Well known, a very nsefnl plant, flowers bright yellow. 1½ feet high. 3d. per pkt.

H.P. Centranthus Macrosiphon - Very pretty, pink. 1½ ft. 3d. per pkt.

SOMETHING ABSOLUTELY NEW FROM AMERICA. With the Raiser's description.

Centrosema Grandiflora-Many old and neglected plants are really valuable and prove eminently satisfactory; but, after all, it cannot be denied that one which is absolutely new to cultivation, and at the same time is one of the very best in actual merit, is decidedly most desirable.

Just such a plant is Centrosema Grandiflora. I have had the pleasure of watching the growth and development of it during the last few seasons. It is a perfectly hardy perennial vine, of rare and exquisite beauty, which blooms early in Jane from seed sown in April, and bears, in the greatest profusion, inverted pea-shaped flowers from 1½ to 2½ inches in diameter, ranging in colour from a rosy-violet to a reddish-purple, with a broad feathered-white marking through the centre. The large buds and the back of the flowers are note white making it appears as if one plant here many of the flowers are pure white, making it appear as if one plant bore many different coloured flowers at one time. Occasionally plants bear pure white flowers, while others are margined with a broad white feathering. The flowers are produced in the greatest abundance, sometimes six to eight in

a single cluster.

The stem and foliage are very graceful, and of a delightful odonr.

Blooming stems placed in water remain fresh for many days.

It is well adapted for every garden purpose, especially as a elimber, running six to eight feet in a season. Even in the poorest soil it will bloom freely until cut down by frost.

I certainly predict for it a great rnn and immense popularity here and abroad.—WM. F. BASSETT. 1s. 6d. per pkt.

н.г. Cerastium Tomentosum (Caroyophyllacew)—A white foliage miniature plant for edgings or rockwork. $\frac{1}{2}$ ft. 1s. per pkt.

H.H.B. Chamæpeuce Casabonæ (Fish-bone Thistle)—I ft. 6d. per pkt.

CHAMÆPEUCE DIACANTHA.

H.H.B. Chamæpeuce Diacantha (Compositæ), Ground Pine-Thistle—Magnificent ornamental foliaged biennial Cardninea, with long leaves thickly set with spines symmetrically arranged. 1 ft. 4d. per pkt.

н.н.а. Chenopodium Atriplicis (Chenopodiaceæ), Goosefoot— Purple-shaded foliage plant. 3 ft. 3d. per pkt.

Mr. W. Pope, The Gardens, Highelere Castle, Newbury, August 9th, 1893.

Plants raised from your Aster Seed have bloomed well and are splendid.

Mr. W. BENNETT, Middleton, August, 1893.

I am pleased to inform you that I was awarded First Prizes for Asters and Stocks grown from seed supplied by you. Thanks for such grand quality.

OUR CINERARIAS.

PHOTOGRAPHIC VIEW OF OUR HOUSE FOR SEEDING FROM, ON COLOURED PAPER CONTAINING NOVELTIES.

WE CAN SUPPLY PLANTS OF NAMED VARIETIES FOR GROWING FOR EXHIBITION PURPOSES.

CANNELLS' GRANDIFLORA CINERARIA

(Compositæ).

Price per packet, 2s. 6d. Smaller packet, 1s. 6d.

They are levely, both Singles and Doubles, during March and April; by far the finest named collection in the world—like all our strains, the best that can be obtained. They were awarded the First Prize in open competition at Regent's Park, and at the Quinquennial Exhibition at Ghent, although there was great competition, even from Paris, ours far out-distanced all, and we were awarded the Silver Medal.

Although liardier in growth, and requiring less care than Calecolarias, the treatment for raising sced, &c., is the same; if required to flower in winter, seed must be sown in May or June. The secret of growing well is to grow fast, never allowing them to receive a cheek, either from being pot bound, dryness of root, or attack of insects, the cooler they are kept the better, just preventing frost reaching them, and giving abundance of air; precisely the same treatment and remarks given for Calecolaria apply to the Cineraria, except larger pots must be allowed for root action, and rather stronger liquid manure. The main thing is to keep them growing quickly from the seedling up to the blooming period, avoiding all other plants that are at all likely to be infested with insects. If the green aphis is not kept thoroughly away there will not be a bloom worth seeing. Every possible means and precaution must be adopted to keep the foliage full of life and vigour. See every morning that the points of their leaves stand erect, and that the foliage is slightly covered with dew-like moisture, and the centre or heart is stout and bold, that their white silver hristles, or respiratory organs, round the stems or leaves are fresh and full of health, and stand out and show conspicuously when the sun shines; avoid dust, and make sure that no other than perfectly clear rain water ever goes near the foliage. Of course at all times the keenest observation of extreme temperature must be made for cold, cutting draughts, or a too glaring sun, and warmth must be avoided, otherwise fine healthy plants and valuable time will be lost. See important cultural particulars given for Cyclamen and Calecolarias, and how to use our "Real Manure," see Floral Guide.

CINERARIA, DOUBLE.

G.P. Cineraria Hybrida (Double)—14 ft. 2s. 6d, per pkt. (See Floral Guide.)

н.р. Cineraria Maritima—Beautiful silver-foliaged hardy perennial; very attractive in beds, mixed borders, and rockwork. 2 ft. 3d. per pkt.

g.p. Cineraria (Single), Cannells' First Prize—1½ to 2 ft. 2s. 6d, per pkt.; smaller pkt. 1s. 6d

CHRYSANTHEMUM CARINATUM.

п.л. Chrysanthemum Carinatum (Composite), Tricolor—White and yellow band, brown centre. 1½ ft. 3d. per packet.

CHRYSANTHEMUM CARINATUM HYBRIDUM FIMBRIATUM FL. PL.

Chrysanthemum Carinatum Hybridum Fimbriatum fl. pl., or The New Double-Fringed Annual Hybrids—This class may now indeed be designated as having attained a state of perfection. The shades of colour vary from white, yellow, to pink, blood-red, and the deepest purple; the flowers are extremely double, of brilliant colours, and the finely fringed petals are overlapping each other. Per pkt., 1s. 6d.

CHRYSANTHEMUM SEGETUM GRANDIFLORUM.

n.a. Chrysanthemum Carinatum (Tricolor) "Eclipse," syn. W. E. Gladstone—It is very seldom that a really good and conspicuous annual makes its appearance, such as will surprise and please everyone. We believe that these will give universal satisfaction, for they are just the shape and colonred flowers to be generally liked; and none are more useful for cut flowers. For shape, see engraving. Colonr yellow, delicate and pretty; some have purple, brown, and other shades of colour round the base. To be sown and treated the same as Asters or Marigolds, and they will flourish and produce innumerable flowers in any sunny situation. $1\frac{1}{2}$ ft. 6d. per pkt.

и.н.г. Chrysanthemum Etoile d'Or (Marguerite)—Yellow. The largest and most beautiful of the Paris Daisies. 2 to 3 ft. 1s. per pkt.

п.р. Chrysanthemum Grandiflorum (Marguerite) — Large-flowering White Margnerite. $1\frac{1}{2}$ ft. 1s. per pkt.

n.p. Chrysanthemum Leucanthemum Grandiflorum — Is another plant which hitherto has been considered a weed, but the one now offered is an improved variety, and is called grandiflorum, and where ent flowers are in great request during summer, no more useful plant is grown—in fact, it is a most remarkable plant, for it is pretty and grows anywhere, and the enormous quantity of flowers it produces is truly wonderful; it should be in every garden and on every table. A threepenny packet of seeds will give barrow-loads of bloom, with no trouble. 2 ft. 3d. per pkt.

CHRYSANTHEMUM LEUCANTHEMUM GRANDIFLORUM.

CANNELLS' RE-SELECTED CHRYSANTHEMUMS.

H.A. Chrysanthemum Hybridum fl. pl.—Remarkably beantiful and exceedingly showy. 2 ft. 3d. per packet.

н. г. Chrysanthemum Inodorum Plenissimum — Produces a large perceutage of double white flowers. 2 ft. 6d. per pkt.

H.A. Chrysanthemum Segetum Grandiflorum—An improved form of the common English variety of our fields; if sown at Christmas it gives abundance of splendid yellow flowers all the spring. Its lovely flowers are most nseful in our homes, and although common, is always a favonrite with ladies. 2 ft. 3d. per pkt.

H.A. Chrysanthemum Coronarium (Double)—This variety is very useful; valuable for cut flowers, and of very casy growth, white and yellow mixed. 2 to 3 ft. 3d. per pkt.

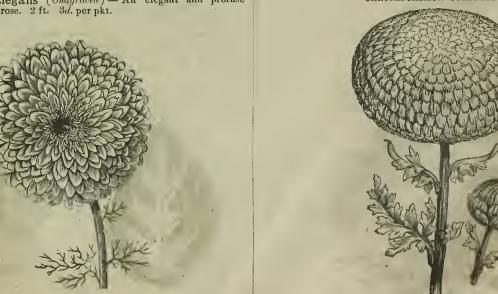

H.A. Chrysanthemum Sultan and Lord Beaconsfield—Edged and striped with gold, maroon, and white. 1½ ft. 3d. per pkt.

n.A. Chrysanthemum (Tricolor), Double—New double annual hybrid varieties. This valuable and most unique novelty has resulted from earefully hybridizing and selecting for several years the semi-double varieties of this useful annual until a high degree of doubleness has been attained. They are extremely variable, embracing a great variety of tints, ranging from white and yellow to richest purples and crimsons, with intermediate shades of rose, lilae, &c. 1s. per pkt.

н.а. Clarkia Elegans (Onagraceae) — An elegant and profuse flowering annual; lilae-rose. 2 ft. 3d. per pkt.

CHRYSANTHEMUM CORONARIUM.

CHRYSANTHEMUM HYBRIDUM FL. PL.

CHRYSANTHEMUM INODORUM PLENISSIMUM.

CHRYSANTHEMUM CARINATUM (TRICOLOR) "ECLIPSE."

CHRYSANTHEMUM LORD BEACONSFIELD.

CHRYSANTHEMUM (TRICOLOR), DOUBLE

Cannells' Re-selected Clarkias.

н. м. Ciarkia Mrs. Langtry—Pure white, centre brilliant carmine-crimsou. 1½ ft. 6d. per pkt.

H.A. Clarkia Pulchella Alba—Beautiful white. 1\frac{1}{2} ft. 3d. per pkt.

H.A. Ciarkia Pulchelia-Mixed. 3d. per pkt.

H.A. Clarkia Pulchella-Rosy purple. 11 ft. 3d. per pkt.

н. A. Ciarkia fl. pl. Purple King (Hardy's)—Exceedingly, pretty and distinct. 2 ft. 3d. per pkt.

H.A. Clarkia fl. pl. Salmon Queen (Hardy's)—Exceedingly pretty and distinct. 2 ft. 3d. per pkt.

HARDY'S CLARKIA.

H.A. Clarkia (Hardy's) Cannells' Re-selected—Mixed beautiful large double flowers. 1½ to 2 ft. 3d. per pkt.

H.B.F. Coleus (Labiatew)—Our own choice collection. Saved from the very best golden-edged kinds, and there can be no doubt it will produce some fine new and distinct varieties. For culture, see Floral Guide. 1½ to 3 ft. 2s. 6d. per pkt.; smaller, 1s. 6d. per pkt.

(76)

Cannells' New Hybrid Cockscombs

(Celosia cristata) amarantacea.

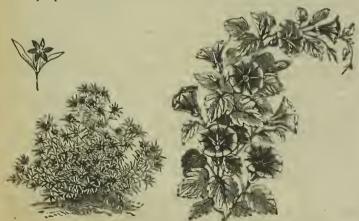

The many hundreds who hononred us with a visit last snmmer will acknowledge that one of our 100-feet honses, filled with Cockscombs, contained the most magnificent lot of this family ever seen in England. Hitherto, one or two colours has heen the extent of the varieties, whereas we have now a dozen distinct colours. All are of rich satiny colour, such as bring forth the expression, "Had I not seen these I could not have believed they would have caused such a glare." Many had perfectly arched heads more than 2 feet over, and every seed is from those which had combs quite equal to the engraving. Mixed, 2s. 6d. per pkt.; smaller, 1s. 6d. per pkt.

G.A. Glasgow Prize-1 ft. 1s. 6d. per pkt.

G.A. Swanley Dwarf—Intense crimson. The hest for market pnrposes, only averaging 6 to 9 inches high. 1s. 6d. per pkt.

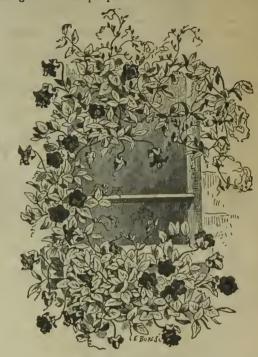

G.A. Empress-Very tall, and grows to an immense size. 11 ft. 1s. 6d. per pkt.

CONVOLVULUS (IPOMŒA PURPUREA) MAJOR. COLLOMIA COCCINEA.

H.H.P. Clianthus Dampieri (Leguminosa), Glory Pea of Australia-No lover of flowers should rest content until he has either seen or grown this, the most hrilliant of the Australian plants. True, it is rather difficult to grow, like many other plants, but if seed is sown in April, in heat, after attaining the height of three inches, exposed to all the light and sun in a temperature of 60 to 70°, and well looked after, it will cause such a furore in the neighbourhood that it would be difficult to restrain people from coming to see. It likes rather poor gravelly or sandy soil. Seeds

should be soaked in water till they swell, and then be covered with a quarter of an inch or less of saudy soil, and pressed down with the hand. It is always best to sow where it is wanted to grow, as the young plants do not like being shifted. 1s. per pkt.

COBLEA SCANDENS.

H.A. Clintonia Elegans, syn. Downingia Elegans (Campanulacew)—Beantiful little annuals, very suitable for edgings or rockeries; sow in heat with care as the seed is very minute. ½ ft. 3d. per pkt.

CONVOLVULUS MINOR ROSEUS.

H.A. Clintonia Pulchella Alba-1 ft. 6d. per pkt. n.n.c. Clianthus Puniceus-Large, bright crimson flowers. 3 to

H.H.P. Cobea Scandens (Polemoniacew)—Purple-lilac, large bell-shaped flowers, a rapid growing climber, producing a grand effect under glass, and during summer on south walls, verandahs, arbours, &c. 2011.

Cobæa Scandens Alba-White. 20 ft. 1s. per pkt. H.A. Collinsia Bicolor Candidissima—White; very pretty dwarf spring flowering annual. 1 ft. 3d. per pkt.

H.A. Collinsia Grandiflora (Scrophularinacea) - Purple. 3d. per pkt.

H.A. Collinsia Multicolor Marmorata - White and rose; very

pretty. 1 ft. 3d. per pkt.

H.A. Collomia Coccinea (Polemoniacee), Phloxworts — Searlet; blooms in July. Sow the seed either in the spring or autumn. 3d. per pkt. Columbine, see Aquilegia.

11.11.P. Commelina Collectis (Commelinacea)—Flowers bright blue, tuberous rooted. 11 ft. 3d. per pkt.

Convolvulus Major (Convolvulacew)-Finest mixed. 10 ft.

3d. per pkt. 3d. per pkt.

H.A. Convolvulus Minor—Crimson Violet flowers, very striking: hright yellow eye, encircled with a band of snowy white, hroadly margined with rich crimson-violet, varying in some hlooms from hright violet to rich velvety purple-crimson. If the some hlooms from hright violet to rich velvety purple-crimson. If the some pkt.

H.A. Convolvulus Minor—Blue. If the solution of the rose-coloured flowers is snrrounded with purplish violet and changes to verse the throat into five broad golden-vellow rays. 3d. per pkt.

towards the throat into five broad golden-yellow rays. 3d. per pkt.

Coreopsis, see Calliopsis.

Cornflower, see Centanrea evanus.

U.P. Cowslip—Finestmixed, early spring flowering. If t. 3d. per pkt.

H.P. Crucianella Stylosa (Rubiaceæ), Crosswort — Pink; very dwarf; useful for rockwork. 3d. per pkt.

H.U.P. Cuphea Eminens (Lathyraceæ)—Red and yellow tubular flowers; useful for bedding or greenhouse.

CANNELLS' CYCLAMEN PERSICUM.

CANNELLS' CYCLAMEN GIGANTEUM.

(78)

OURS ARE THE FINEST AND NEAREST PERFECTION EVER SEEN.

(Primulacea).

Awarded a Silver Medal by the Royal Horticultural Society for our Strain.

During the spring our two honses, filled with the best hybrids, is one of the grandest floral sights round London. We invite all to come and see how, and from what, we save our seeds.

Cyclamen, although so beautiful, yet how seldom do we see them grown well, except by a few; yet to alter this their few natural wants should have attention, and mcrely mentioned to be thoroughly understood,

then the result would he the reverse.

sow seeds thinly, in a compost of two parts turfy yellow loam, one of peat and leaf mould mixed together, and one part of thoroughly decayed cow-dung sifted very fine, and a little silver saud; cover the seeds to the depth of a quarter of an inch; place the pots on a shelf in the greenhouse, near the glass in the winter, and in summer in any shaded pit. Under no circumstances must the surface of the soil become dry. Some of the seeds

take four months to germinate. After the plants have attained one or two leaves, and formed a small bulb, remove with root intact into small and well-drained pots, at all times using the soil mentioned above, adding one ounce to every peck of soil of our Real Manure, well mixed. Of course these small pots and plants must be watered with a rose on water-can, and hence the foliage moistcued at every watering, and if anything but the cleanest rain water is ever used, the leaves become corroded with a white slime, and unsatisfactory results will be sure to follow, and as the entire health of the plant depends on a few leaves only, these precious leaves must be kept of a bright green hue from the first seedling leaf up to the flowering period. All sun must be avoided during the late spring and summer, and never allowed to shine on them after 8 o'clock a.m. and hefore 4 o'clock p.m. A cold frame in a shaded position, pitched north, is the best place for them, and as soon as they have made their season's growth, and show signs of going to rest, withhold water for a fortnight, shake away all soil, and re-pot. Be particular that the bulbs are buried just below the surface, except the erown, and after all are placed in a shaded frame, and every pot placed on a hard surface, so that no worms ean enter; keep lights off in all moderate weather, and as cool as possible during hot weather, and in ahout a month new foliage will hegin to push up; showery weather and night dews assist them immensely. Remove to a greenhouse, place them close to the glass, with pleuty of air and light; they will he a surprise and delight all the winter. As soon as they show flower, give liquid manure once a fortnight; and if the foliage hecomes too vigorous, withhold it.

Cyclamen (Hybrid) Persicum-Red. 1s. 6d. and 2s. 6d. per pkt.

Cyclamen (Hybrid) Persieum-White. 1s. 6d. and 2s. 6d. per pkt.

G.P. Cyclamen (Hybrid) Persicum-Rose. 1s. 6d. and 2s. 6d. per pkt.

G.P. Cyclamen (Hybrid) Persieum-White, with purple base. 1s. 6d. and 2s. 6d. per pkt.

G.P. Cyclamen Persicum—Mixed; saved from our finest Prize Collection of the very best white and highly-coloured varieties. ½ ft. 1s. 6d. and 2s. 6d. per pkt.

G.P. Cyclamen Persicum Giganteum — Very large flowers. 4 ft. 1s. 6d. and 2s. 6d. per pkt,

G.P. Cyclamen Persicum Giganteum-Rose. 1 ft. 2s. 6d. per pkt.

n.r. Hardy Cyclamen-In the rockery, perhaps, there is no prettier plant grown; it has the advantage of reproducing itself by setting its own seedlings for the coming year. \(\frac{1}{4}\) to \(\frac{1}{2}\) ft. 1s. per pkt.

G.P. Cyclamen Persicum Giganteum-White, with purple base. 12-ft. 1. 1s. 6d. and 2s. 6d. per pkt.

G.P. Cyclamen Persieum Grandiflorum-1 ft. 1s. 6d. and 2s. 6d per pkt.

CYCLAMEN HEDERÆFOLIUM (HARDY).

CANNELLS' DAHLIAS.

(Composita.)

We have been Awarded 3 Silver-Gilt and 3 Silver Medals for our Dahlias during the past two years.

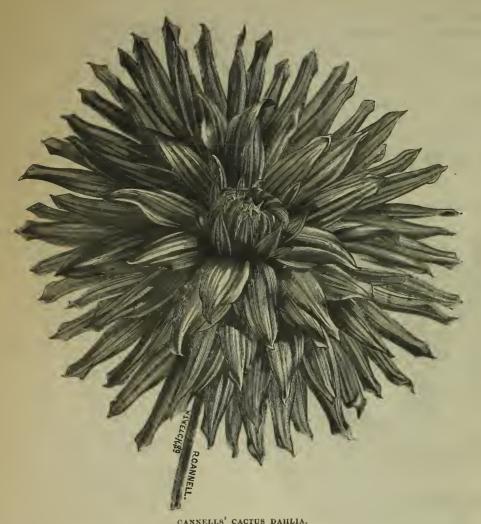

CANNELLS' SINGLE DAILLIAS. FINEST EXHIBITION

DELPHINIUM FORMOSUM.

DELPHINIUM HYBRIDUM.

CANNELLS' CACTUS DAILLIA.

H.H.P. Single Mixed - From the fluest Collection in cultivation. 3 to 4 ft. 3d. per pkt.

н.н.р. Dahlia, Double-Saved from our unrivalled collection of show kinds, and cannot fail to produce some firstclass varieties. 4 ft. 1s. per pkt.

н.н.р. Dahlia, Caetus — Choicest mixed, from our best named varieties. 3 to 4 ft. 1s. per pkt.

Dahlia, Tom Thumb-The plants are of a close compact habit, and produce a dense mass of flowers of the most brilliant colours. 1 ft. 1s. 6d. per pkt.

н.н.р. Dahiia, Pompon—The pretty double bouquet Dahlias. 21 to 3 ft. 1s. per pkt. For descriptions, see Guide.

Daisy, see Bellis.

H.H.A. Datura Chlorantha, fl. pl. (Solanacew) - Golden double, scented flowers. $2\frac{1}{2}$ ft. 6d. per pkt.

н.н. A. Datura Fastuosa (The Thorn Apple) - Donble purple. 2 to 4 ft. 3d. per pkt.

н.н. A. Datura Meteloides, syn. Wrightii - Delicate hlue and white shaded; very handsome. 2 ft. 3d. per pkt.

H.P. Delphinium Formosum (Ranunculacee)-Bright blue, with white centre; one of the finest varieties of this beautiful genus. 3 ft. 3d. per pkt.

Delphinium Consolida fl. pl. (Tom Thumb)-A pretty dwarf Larkspur, with a heautiful pyramidal habit, the flowers are quite double and large, varying in colour from white, rose, purple, hlue, carmine, to clear and dark shades; highly useful for flower heds, pot culture, and the market trade. 1s. 6d. per pkt.

H.P. Cannells' Delphinium Hybridum, mixed -This mixed seed is collected from one of the hest collections, comprising 50 varieties. We grow half an acre. Onr spikes of bloom were awarded the Silver Medal of the Royal Botanic Society, Regent's Park. 3 ft. 3d. per pkt

See Collection in Floral Guide.

Devil-in-the-Bush, see Nigella.

W. Saphan, Esq., Besborough, Cork, February 22nd, 1893
I send you photograph of our house filled with Cyclamen—seed we had from you; they are so splendid I thought you would like to see what amateurs do with what you supply; they are only 15 mouths old. People came a long distance to see them.

Mrs. CLUTTERBUCK, Carlisle. February 13th, 1893. My garden was hy far the nicest in the roal, and I want to keep up its reputation. I consider it entirely owing to your seeds being better than any of our local nurserymen's.

Mrs. Turnen, 4 Calverley Terrace. Tunbridge Wells, June 23rd, 1833.

Mr. Turner's garden in Calcutta is a great success, owing to the splendid quality of your seeds.

Mr. J. Street, The Gardens, Cannon Hill, Maidenhead, February 4th, 1893. Balsams, Stocks, and Asters were the admiration of all. I had some grand plants from your seed.

Mr. A. Vince, The Gardens, Newlands Park, Sydenham, S.E., July, 1893. Your seeds have turned out a great success, especially Cinerarias; everyone was astonished.

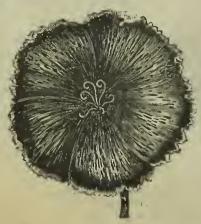

DATURA FASTUOSA, DOUBLE.

DATURA METELOIDES (WRIGHTII).

- н.г. Delphinium Grandiflorum—Beautiful blue. 2 ft. 3d. per pkt.
- H.P. Delphinium Cardinale—Handsome species, with large scarlet and yellow flowers; quite hardy. 3 to 4 ft. 1s. 6d. per pkt.
- n.r. Delphinium Nudicaule—Flowers produced in spikes, each blossom being an inch in length; the colour varies from a light searlet to a shade verging closely on crimson. $\frac{3}{4}$ to $1\frac{1}{2}$ ft. 1s. per pkt.
- H.P. Dianthus Barbatus (Caryophyllacew), Sweet William, Cannells' Perfection—If it was needed, we could append 100 testimonials and extracts from the Horticultural Press of the splendour and hrillianey of our strain, and although a Sweet William, we know of no flower that requires more experience and stricter attention to produce seed that will bring forth flowers like the engraving than this plant. 1 ft. 3d. per pkt.

DIANTHUS HEDDEWIGH DIADEMATUS FLORE PLENO.

DIANTHUS HEDDEWIGH, SINGLE.

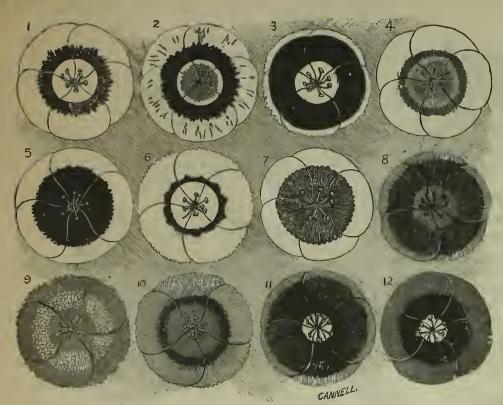

DELPHINIUM NUDICAULE

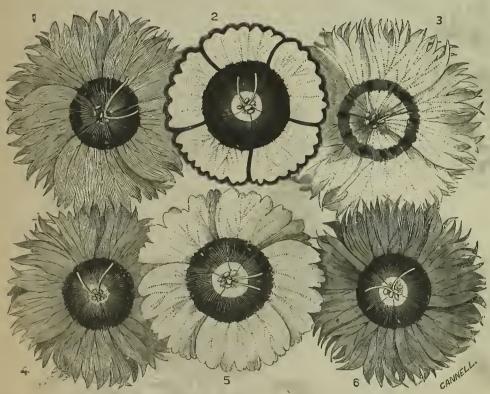

JAPANESE DIANTHUS, EASTERN QUEEN AND CRIMSON BELLE.

G

Dianthus Barbatus (Sweet William, Cannells' Perfection).

H.P. CANNELLS DIANTHUS PLUMARIUS SINGLE, MIXED.

n.s. Dianthus Chinensis fl. pl. (Double Indian Pink)—Charming Biennials, well adapted for bedding purposes, if sown carly and transplanted. Free blooming. 1 ft. 3d. per pkt.

H.A. Dianthus, Eastern Queen and Crimson Belle—These beautiful forms of the popular D. Heddewigii are most distinct and pleasing. Eastern Queen is beautifully marbled, the broad bands of reddish lake npon the paler surface of the petals are very striking and pretty. Crimson Belle, as its name implies, is of a rich, vivid crimson-lake colour; flowers of extraordinary size and substance, evenly and finely laciniated. 1 ft Each, 6d. per pkt. Both colours mixed, 6d. per pkt.

H.A. Dianthus Heddewigii — Single, easy to grow, and very showy. 3d. per pkt.

H.A. Dianthus Heddewigii Diadematus fl. pl.—A very beautiful and valuable improvement; babit more compact and robust than that of the well-known Dianthus Heddewigii fl. pl.; flowers large; colonrs are arranged in zones, varying from lilae and crimson to richest dark purple; the edges of the petals are very beautifully fringed and margined with white. 1 ft. 6d. per pkt. Treated the same as the Aster.

n.r. Digitalis (Serophularineæ), Foxglove, Gloxinæflora Improved Large Spotted — An excellent strain, with large flowers, beavily spotted; flowers nearly equal to the Gloxinia. Very striking in a shrubbery. This seed is from onr very best kinds. 3 to 5 ft. 3d. per pkt.

H.A. Dracocephalum Moldavica (La-biata), Balm—Purple; very pretty. 1 to 1½ ft. 3d. per pkt.

н.н.г. Eccremocarpus Scaber, syn. Calampelis Scaber (Bignoniacew)—Elegant elimber; a magnificent plant for sonth walls, verandabs, pillars, &c. 3d. per pkt.

Egg Plant-See Aubergine.

n.H.r. Echeverias (Cotyledon) (Crassulaceæ)—Splendid plants for bedding purposes. We have one of the largest stocks in this country. The seed is very dust-like, therefore must be barely covered with soil, and treated very carefully until the seedlings are fit to handle. To be treated the same as recommended for Calceolarias.

E. Metallica. 11 ft. 1s. per pkt.

E. Secunda. ½ ft. 1s. per pkt.

E. Secunda Glauca. ½ ft. 1s. per pkt. Edelweiss—See Gnaphalium.

Eragrostis - See Ornamental Grasses.

H.A. Erysimum Arkansanum (Cruciferæ)—Sulphur yellow. 1½ ft. 3d. per pkt. Very useful for spring bedding.

H.A. Erysimum Perofskianum— Orange coloured flowers. 1½ ft. 3d. per pkt. Sow in the autumn for an effective display in the spring.

n.n.s. Erythrina Crista Galli (*Leguminosæ*), Coral Tree—Bright, deep scarlet flower. 3 to 5 ft. 1s. per pkt.

n.a. Eschscholtzia [Californica—Yelt low., 1 ft. 3d.per pkt.

Although these are amongst the Diantbus, and correctly so, yet they are really Single Pinks, and for all purposes of eut-flowers most lovely and beautiful. One of the easiest to grow either from seeds or cuttings, grow anywhere; are what was formerly called Rock Pinks. Strange to say, they are almost unknown. We are quite sure our customers and friends will give us great credit for bringing these improved kinds plainly before them.

1 ft. 1s. per pkt.

DIANTHUS SINENSIS FL. PL.

EUCALYPTUS GLOBULUS.

ESCHSCHOLTZIA" CROCEA FLORE PLENO.

CANNELLS' DIGITALIS (FOXGLOVE).

n.n.r. Eryngium Amethystinum—Remarkable for the Amethystine-bloom which the leaves assume in July, and until the approach of frost; suitable for planting in groups. $2\frac{1}{2}$ ft. 3d, per pkt.

n.a. Eschscholtzia Crocea fl. pl. (Papaveracew) — Donble yellow. 1 ft. 3d. per pkt.

п. A. Eschscholtzia Crocea — Yellow flowers; when once introduced into the garden will sow themselves. 1 ft. 3d. per pkt.

H.A. Eschscholtzia Mandarin — The inner side of the petals is of a rich orange colour, and the outer side brilliant mandarin scarlet. 1 ft. 3d. per pkt.

H.A. Eschscholtzia Rose Cardinal — Bright rose-coloured flowers, pretty foliage; a very useful addition to our hardy annuals. 1 ft. 6d. per pkt.

H.n.sh. Eucalyptus Globulus (Myrtacew), The Blue Gum of Tasmania—This plant is said to possess the remarkable power of destroying miasmatic influence in fever-stricken districts. It also has the singular property of absorbing ten times its own weight of water from the soil; hence it is now being planted on a large scale, with a view to improving the pestilential character of marshy and other unhealthy districts. A pretty pot plant and also for snb-tropical effect. 4 to 200 ft. 3d. per pkt.

EUCHARIDIUM BREWERI.

H.A. Eucharidium Breweri (Onagrariea)—Rare and truly magnificent species of dwarf spreading habit of growth and narrow lanceolate foliage. The colour of the flower is a pleasing purplish rose, shading to white in the centre; the broad obcordate petals overlapping at their margins and furnished with a narrow tapering lobe from each sinus are the most remarkable feature of this distinct and truly elegant plant. It flowers very profusely, and is of the same easy culture as the different kinds of Clarkia. 1 ft. 1s. 6d. per pkt.

n.a. Eucharidium Grandiflorum Album—Flowers pure white. 1 ft. 3d. per pkt.

n.a. Eutoca Viscida (Hydrophyllacew) syn. Phacelia—Producing very bright blue flowers; very snitable for bees. 1 ft. 3d. per pkt.

Everlasting Flowers—See Helichrysum and Acroclinium. Fennel Flower—'ee Nigella.

6 2

Fenzlia Dianthoides (Polemoniacea) - Smothered with brilliant rose-purple flowers; very dwarf, snitable for pots, rockerics, or edgings. $\frac{1}{4}$ to $\frac{1}{2}$ ft. 6d. per pkt.

II.H.A. Fenzlia Dianthoides Alba-White. 1/2 ft. 6d. per pkt.

G.P. Ferns—Mixed, from the best greenhouse and stove kinds $1s.\ 6d.$ and $2s.\ 6d.$ per pkt.

Feather Grass - See Stipa.

Ferns-Best hardy mixed. 1s. per pkt.

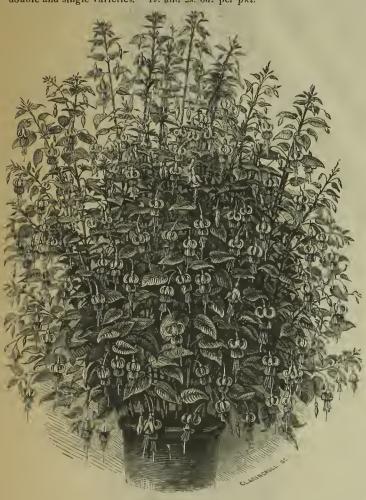

Fish-bone Thistle -See Chamcepeuce.

Flos Adonis-See Adonis.

Forget-me-not-See Myosotis.

Foxglove - See Digitalis.

H.H.P. Fuschia (Onogracea)—Saved from our splendid collection of ole and single varieties. 1s. and 2s. 6d. per pkt. double and single varieties.

SPECIMEN FUCHSIA.

PERENNIAL VARIETIES

(Hybrida Grandistora).

H.P. Gaillardia - A lovely coloured flower, perfectly distinct to any other, and for all decoration quite a charming feature; perfectly hardy, producing abundance of flowers all the summer. For cnt flowers one of the most useful plants of the garden. 12 ft. Mixed, 1s. per pkt.

H.H.F. Gaillardia Pulchella Picta (Composita)—A very fine free-flowering variety, of good compact habit; the flowers, which are of a large size, are of a reddish crimson colour, bordered with citron-yellow. 1 ft.

H.H.A. Gaillardia Picta Lorenziana—The ray and disc flowers of this variety develop themselves into tubnlar funnel-shaped florets of 3 to 5 lobes, and form handsome flower heads; it will be found very useful for cutting. The seed offered is mixed, containing sulphur and golden-yellow, amaranth-red, claret, red, and purple. 1½ ft. Sow early in March. 6d. per pkt.

GAILLARDIA PICTA NANA.

GAILLARDIA PICTA LORENZIANA.

GLADIOLL

H.P. Gentiana Acaulis (Gentianew)—Beautiful hardy plant, exceedingly free, will grow almost anywhere; it forms dense masses of dark green foliage, from which protrade large deep blue flowers; it continnes in bloom from spring for a long time. A bed or line of this lovely plant once seen in bloom will never be forgotten. \(\frac{1}{4}\) ft. Seed germinates slowly. 3d. per pkt.

Geranium-See Zonal Pelargonium.

H.P. Geum Atrosanguineum fl. pl. (Rosacew) — Handsome continuous-blooming border plant, large double flowers of a dazzling scarlet. 3d. per pkt.

H.P. Geum Coccineum Grandiflorum—Scarlet; very fine. $1\frac{1}{2}$ ft. 3d. per pkt.

H.A. Gilia (Leptosiphon) Achilleæfolia (Polemoniaceæ)

—Beautifal annual when grown in masses; much prized for roekwork.

1 ft. 3d. per pkt.

H.A. Gilia Liniflora—A new pretty species from California. 1 ft. 3d. per pkt.

H.A. Gilia Minima Cœrulea—A very pretty miniature annual. 1/2 ft. 3d. per pkt.

GILIA TRICOLOR,

H.A. Gilia Tricolor-White and purple. 1 ft. 3. per pkt.

H.A. Gilia-Mixed. 3. per pkt.

H.P. Gladiolus (Iridew)—Mixed. Perfectly hardy garden varieties, therefore saving the trouble of housing them from the frost. 2 to 4 ft 6d. per pkt.

II.H.P. Gladiolus—Choice mixed; saved from the best hybrids of Gandavensis, 3 to 4 ft. 1s, per pkt.

CANNELLS' GLONINIA, FINEST SPOTTED.

Whenever these gorgeous flowers are at the zenith of their perfection. it would be difficult to imagine anything more heautiful, and as they can be easily flowered twice a-year, it is surprising that they are not more generally grown.

P. CANNELLS' GLOXINIA (Gesneraceae).

n Yama

Erecta—The hest erect, flowering kinds. \(\frac{3}{4}\) ft. \(2s. 6d.\) per pkt.; smaller pkt., 1s. \(6d.\)

Pendula—Drooping flowers. 3 ft. 2s. 6d. per pkt.; smaller pkt.,

1s. 6d.

Spotted-We have a charming strain 2s. 6d. per pkt.; smaller pkt., 1s. 6d.

To be sown in a brisk heat at any time during February, and grown on vigorously, and they will flower abundantly during summer and autumn,

and make extra strong roots by winter.

Many who saw onr 100-ft. house last season filled with the above in all their various forms will confirm the splendid sight, size of flower, and the surprising glare of colour; in fact, many exclaimed, "These are grand flowers! they beat Roses." And, like all other choice flowers, every bloom selected for seed is hybridised with the greatest possible care. The brilliancy and beauty of the spotted kinds is perfectly marvellous. See Floral Guide for our grand collection.

G.P. Grevillea Robusta (Proteacew)—Exceedingly graceful for table decoration. In the conservatory and sub-tropical garden they rank foremost as fine foliage plants. Seed should be sown in peat. 3 to 5 ft.

H.P. Gnaphalium (Leontopodium) Alpinum (Compositae), Edelweiss—The famous and true Edelweiss of the Alps. The flowers are of downy texture and pure silver white; it thrives hest in calcareous soil, with full exposure to the sun; quite bardy. ½ ft. 1s. per pkt.

GNAPHALIUM LEONTOPODIUM (EDELWEISS)

CANNELLS' SELECTED GODETIAS.

H.A. Godetia Bijou (Onagrariew)—The dwarfest, of very bushy habit; flowers pure white, marked with a dark rose spot. \(\frac{3}{4} \) ft. \(6d.\) per pkt.

II.A. Godetia, Princess of Wales—Ruby-crimson, pencilled with pale rose and silver-grey. 1\frac{1}{4} ft. 3d. per pkt.

II.A. Godetia, Lady Albemarle—Superb variety, dwarf, brilliant crimson coloured flowers; most magnificent. 1 ft. 3d. per pkt.

GODETIA, LADY ALBEMARLE.

u.A. Godetia, Lady Albemarle Compacta—A dwarfer and more compact form of the preceding brilliant variety; particularly fine and showy. 1 ft. 3d. per pkt.

n.a. Godetia, The Bride—A very pretty variety. Should be grown in every garden. $1\frac{1}{2}$ ft. 3d. per pkt.

H.A. Godetia, Duchess of Albany—The plants are of handsome pyramidal growth, branching from the bottom, and producing large clusters of Enothera-like flowers of a beautiful glossy, satiny,-white, each ahout 4 ins. when fully expanded. 1 ft. 6d. per pkt.

H.A. Godetia Rosea Alba—Has a bright crimson spot on each petal, which has a peculiarly pretty effect. 1 $\frac{1}{2}$ ft. 3d. per pkt

H.A. Godetia Whitneyi-Very attractive; flowers varying from flesh colour to crimson. 1 to 1½ ft. 3d. per pkt.

Godetia, White Pearl—New dwarf pure white variety, reproducing itself true from seed. Its individual flowers are not quite so large as those of G. Duchess of Albany, but equally as pretty, and of the same satiny-white. Ou account of its very regular compact growth, it is best adapted for dwarf beds or borders. 6d. per pkt..

GODETIA, DUCHESS OF ALBANY.

H.A. Godetia—Very showy, summer flowering; mixed. 3d. per pkt Golden Feather—See Pyrethrum. Gourds—See Vegetable Seeds.

GOMPHRENA GLOBOSA NANA COMPACTA.

H.H.A. Gomphrena Globosa Nana Compacta (Amarantaca), Everlasting—Purple, dwarf; is the best everlasting flower that has been introduced for many years. A gem for pot culture. 3d. per pkt.

H.H.A. Gomphrena Globosa (Globe Amaranthus) — Highly prized fortheir heads of flowers, which will retain their beauty for months. Various shades of purple. The seeds to be treated the same as Balsams 1½ ft. 3d. per pkt.

Grasses, Ornamental-See Collection.

n.p. Gynerium Argenteum (Graminen), Pampas Grass—Producing large, feathery plumes; useful as single specimens ou lawns. 4 to 5 ft. 6d. per pkt.

H.A. Gypsophila Elegans (Caryophyllew)—Very graceful hahit; flowers rosy-white. $1\frac{1}{2}$ ft. 3d. per pkt.

u.a. Gypsophila Elegans Rosea — Producing attractive rose-coloured flowers. 2 ft. 3d. per pkt.

H.A. Gypsophila Muralis—Very dwarf; useful for rockwork and edgings. ½ ft. 3d. per pkt.

H.P. Gypsophila Paniculata — Charming plants, covered with small white flowers; very handy for table decoration, &c. Much used in Paris. 2 to 3 ft. 3d. per pkt.

Heartsease-See Pansy.

H.H.P. Helenium Pumilum—Bright yellow flowers, useful for cutting purposes. $1\frac{1}{2}$ ft. 3d. per pkt.

H.A. Helianthus (Compositæ) Sunflower, Annuus, Double—3d. per pkt.

n.a. Helianthus Californicus fl. pl.—Large flowers; effective. 5 ft. 6d. per pkt.

n.a. Helianthus Citrinus—This very desirable plant for large gardens, shruhberies, and sub-tropical effects, is of branching habit, about 4 ft. high; flowers are a medium size, with pale yellow ray and dark disc; exceedingly pretty, quite distinct from all other varieties. 6d. per pkt.

HELIANTHUS ANNUUS GLOBOSUS FISTULOSUS (DOUBLE SUNFLOWER).

H.A. Helianthus Annuus Globosus Fistulosus—Flowers of a globular outline, from 12 to 18 inches in width, of a rich saffron yellow. The hest of all the doubles; no comparison to those mostly seeu. 5 to 6 ft. 1s. per pkt.

H.A., Helianthus, Primrose—Coloured; very distinct, bearing beantiful large single flowers, with a dark centre. 5 ft. 6d. per pkt.

H.A. Helianthus Cucumerifolius—New, very neat in habit, pretty; small, single yellow flowers, with black centre; very decorative. 3½ ft. 6d. per pkt.

H.A. Helianthus Uniflorus—Immense single yellow flowers, large dark eentre. 6 to 8 ft. 6d. per pkt.

H.A. Helianthus (Single Sunflower)—All the fluest single varieties; mixed. 4 to 6 ft. 3d. per pkt.

These wonderful Sunflowers are very attractive, admirably adapted for intermingling in shrubbery borders and in groups for distinct effect and for naturalisation in semi-wild situations.

n.H.A. Helichrysum Bracteatum Album-White. 3d. per pkt.

HELICHRYSUM BRACTEATUM.

HELICHRYSUM (EVERLASTING)

H.H.A. Helichrysum Monstrosum fl. pl. (Composite)—Choice mixed; flue large flowers. These are known as Everlasting Flowers, and as ent dried hlooms are largely used for church and house decorations at Christmas festivals and other important oceasions; also for winter houquets, in which, to conduce to general effect, it is advisable to have some varieties of the Ornamental Grasses. (See page 117.) It is necessary, when cutting the flowers for drying for winter use, to pluck them before the flower-had is expanded, otherwise they may have a tendency to seed, and present a somewhat ragged appearance. 3d. per pkt.

и.н.а. Helichrysum (Elichrysum) Bracteatum (Composita)— Everlasting. Dwarf, yellow. 3d. per pkt.

н. р. Helleborous Niger (The Christmas Rose)—1s. per pkt.

HELIOTROPIUM

H.H.P. Heliotropium (Boraginew), Cherry Pie—Finest large flowering varieties; mixed. I to 2 ft. 6d. per pkt.

H.H.A. Helipterum Sandfordi, syn. Humboldtianum (Compositæ) Everlasting flower. 1 to 2 ft. 3d. per pkt.

п.н. Hesperis Matronalis Candidissima (Crucifere), Rocket—White flowered, and has a sweet perfume towards evening. 2 to 3 ft. 3d. per pkt.

HIBISCUS TRIONUM.

H.H.P. Hibiscus Coccineus—Large magnificent flowers of a bright earmine-red, one of the finest plants for bedding out, and blooms more freely than the *Chinese Hibiscus*. 4 to 5 ft. 6d. per pkt.

HESPERIS (ROCKET).

H.A. Hibiscus Trionum syn. Africanus (Malvacew) — Abundance of lovely creamy-white flowers (measuring about 2 inches aeross), with intense dark throat, nearly black; much admired; sow in gentle heat in March, plant out in May. 3d. per pkt.

n.r. Hollyhocks (Althæa fl. pl. vars.)—The distinctive character and massive beauty of the Hollyhocks render them unrivalled as a picturesque relief to the background of evergreen shrubs. For distinct effect in large groups they are matchless; they also form a showy and effective outline in flower gardens and borders, and an admirable boundary line for extensive avenues in park seenery. The seed offered has been saved from our exhibition flowers, and cannot fail to produce first-class varieties. 5 to 6 ft. 1s. and 2s. per pkt.

Sow in February in a moderate heat, and grow on quickly, and again in August. These kept in a cold frame all the winter, and planted out in March make the best display.

Honesty-See Lunaria biennis.

A.c. Humulus Japonicus (*Urticacew*)—Japanese climbing hop, of very rapid growth, luxuriant foliage, and one of the best plants for covering verandahs. trellis work, &c., &e. 10 ft. 6d. per pkt.

Humulus Japonicus fol. variegatus—A very attractive variety of the Javanese Hop with beautiful silvery-white, variegated, or blotched leaves. It is as hardy and of the same vigorous growth as the green-leaved species; will prove to he an admirable and decorative climbing plant, well adapted for covering feaces, rustic arches, &c.; 80 per cent. come true from seed. Per pkt., 1s.

H.H.B. Humea Elegans (Calomeria Amarantoides) (Compositae)
—A well-known and very useful decorative garden plant, producing large
graceful plumes of rose-tinted flowers. Superior in appearance to the
Tobacco Plant, the leaves having a distinct and powerful perfume. Also
valuable for conservatory or room decoration in winter if lifted before the
frost. 5 ft. 1s. per packet.

H.H.B. Humea Elegans Alba—Uncommonly free-flowering, graceful habit, dark green foliage, pure white flowers; very novel. 5 ft. 1s. per pkt. Sow in August, and place in a warm pit or greenhouse; shift into larger pots until bedding-out time. If large, fine specimens are required, they must never become pot-hound.

n.H.B. Hyacinthus Candicans, syn. Galtonia Candicans (Liliaceae)—A nohle bulbous plant, with narrow leaves, and hearing from 18 to 20 large, white, bell-shaped flowers ou a stout stem, 3 feet high; quite hardy, 3d per pkt.

o.p. Impatiens Sultani (Geraniaceæ), Balsam—One of the most distinct and beautiful of all decorative plants of recent introduction, and owing to its gorgeous colouring and profuse and continuous flowering is rapidly becoming popular. It is of ueat, compact growth, almost a perpetual bloomer; in the stove it is quite at home, in warm houses it does well. The flowers are of a brilliant rosy scarlet colour, a peculiarly distinct but most effective hue, and are produced so freely that a well grown specimen appears to he quite a ball of flower. Seedlings make dwarfer and more compact plants than cuttings, and flower with much greater freedom, commencing to bloom freely when only a few inches high. Small plants, with their brilliant rosy scarlet flowers, are always in request for decorative purposes, especially for dinner table and drawing-rooms. It is also very effective grown into specimen plants. One was exhibited at the Royal Horticultural Society, measuring 3 feet 6 inches in diameter, of semiglobular form. 2 ft. 1s. and 2s. per pkt.

Impatiens Sultani (Queen Carola)—A charming variety, with salmon-rose flowers, which are freely produced, and remain a long time in bloom; it comes almost true from seed. 1s. 6d. per pkt.

n.p. Iberis Sempervirens (Crucifera)—Pure white, large flowers; early blooming; useful for edgings, beds, and rockwork. 1 ft. 6d. per pkt.

H.H.A. Ice Plant, Mesembryanthemum Crystallinum (Ficoidea)—A singular trailing plant, with thick fleshy leaves, that have the appearance of being covered with crystals of ice; very oruamental for mixing with other plants in conservatory or flower garden. Sow in heat in March. ½ ft. 3d. per pkt.

Indian Pink-See Dianthus Chinensis.

INULA ENSIFOLIA.

Inula Ensifolia—A very free flowering and showy perennial composite, forms into a neat bush, 12 to 15 inches in height; the flower heads are of a pure golden yellow, and fully 1½ inches across; when sown early the seedlings will flower the first season. Perfectly hardy, and does well in any soil. 1s. 6d per pkt.

H.H.A. Ionopsidium Acaule (Crncifera)—Lilac flowers, very pretty and useful for rockwork; pots. 4 ft. 6d. per pkt.

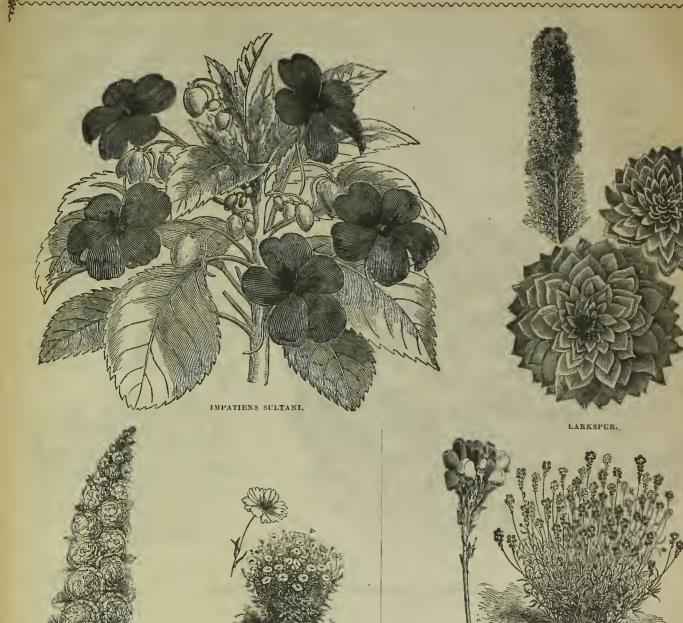

Ipomæa-See Convolvulus.

Jacobœa-See Seneeio.

H.A. Kaulfussia (Charieis Heterophylla) Amelloides (Compositæ)—One of the useful tribes of hardy annuals; blue. \(\frac{3}{2} \) ft. \(3d. \) per pkt.

н. A. Kaulfussia (Charieis) Amelloides Kermesina—Searlet; very showy. 3d. per pkt.

u.a. Kaulfussia (Charieis) Amelloides Alba-White. 3d per pkt.

HOLLYHOCK.

LAYIA ELEGANS

H.A. Larkspur Hyacinth Flowered (Ranunculacear)—Dwarf and beautiful class, with double flowers, Mixed. 1 ft. 3d. per pkt.

н.а. Larkspur Bismarck (Delphinium Consolida Robustum fl. pl.)—Very fine; mixed. 1 ft. 3d. per pkt.

H.A. Larkspur Dwarf Ranunculus Flowered Rocket—Beantifnl class, with globular flowers, spirally arranged on long elegant spikes. Ift. 3d. per pkt.

H.A. Larkspur Tall Double Rocket (Delphinium Ajacis elatum fl. pl.)—Finest. 1½ fl. Mixed, 3d. per pkt.

H.H.P. Lantana (Verbenacew)—A beautiful plant, either for garden

H.H.P. Lantana (Verbenacew)—A beautiful plant, either for garden or greenhouse. The seed is saved from our collection, and will, in all probability, produce some splendid new kinds. Mixed. Sow in March. 6d. per pkt.

n.n.a. Lasthenia Californica syn. Glabrata (Composita)—Bright golden-yellow flowers; early blooming; showy. 1 ft. 3d. per pkt.

Lathyrus Odoratus-See Sweet Pea.

H.P. Lathyrus Latifolius (Leguminosar) (Everlasting Pea)—Red. 6 ft. 3d. per pkt.

LINARIA RETICULATA AUREA PURPUREA.

п.р. Lathyrus Latifolius Albus (Everlasting Pea)—White 5 ft. 6d. per pkt.

n.r. Lavatera Arborea Variegata (Malvacew)—A new variegated-leaved variety, quite hardy; very ornamental foliage plant. 4 to 5 ft. 1s. per pkt.

n.a. Lavatera Trimestris-Red; a splendid annual; excellent as a back ground for other plants; also very effective in shrubbery borders or large masses. 3 to 4 ft. 3d. per pkt.

 $_{\rm H.A.}$ Lavatera, White-A white form of the preceding. 3 to 4 ft. 3d. per pkt.

n.a. Layia Elegans (Compositæ)—A pretty and attractive little annual that ought to be more generally grown, if only for cut flower purposes. A bed or mass of this annual produces a fine effect, owing to the large quantity of bloom produced. The leaves are almost entirely hidden by the flowers. May be sown in autumn or spring, and flowers then from April to July, or from July to October. 1½ ft. 6d. per pkt.

н. A. Leptosiphon (Gilia) Densiflora—Flowers produced in clusters, of a bright purple. 1 ft. 3d. per pkt.

H.A. Limnanthes Douglasi (Geranacew) — Yellow and white, exceedingly pretty; good for edging, clumps, &c. $\frac{3}{4}$ ft. 3d. per pkt.

H.P. Linaria Cymbalaria (Scrophularinew), Kenilworth Ivy—Rich violet, fine for hanging baskets, rockwork, &c. 1s. per pkt.

n.p. Linaria Maritima—A very dwarf, neat species, with small roundish foliage, and a profusion of lilae-purple flowers shaded with white at the palate; it flowers first year from seed, but more strongly the second season. 3 ft. 1s. per pkt.

и. P. Linaria Purpurea—Purple. 1 to 2 to 3d. per pkt.

H.A. Linaria Reticulata Aurea Purpurea (Toad Flax)—Mixed. One of the most showy annuals in existence, 1 ft. 3d. per pkt.

H.P. Linum Flavum — Golden Yellow; very pretty. 1 ft. 3d.

н.н.а. Linum Grandiflorum Rubrum ($Line \alpha$), Scarlet Flax—Splendid colour. $1\frac{1}{2}$ ft. 3d. per pkt.

H.P. Linum Perenne-Blue; neat border species. 1½ ft. 3d. per pkt.

H.H.A. Loasa Aurantiaca, syn. Lateritia (Loasew)—Beautiful climbing plant, snitable for trellis or wire-work. 6 ft. 3d. per pkt.

H.H.A. Lobelias (Campanulaceae).

Brighton—For general purposes, the brightest blue Lobelia ever yet sent out, and the best variety of the Speciosa elass. 4 in. 1s. per pkt.

Blue Stone-True, clear blue, without eye. 5 in. 1s. per pkt.

Crystal Palace Compacta—Deep blue; excellent for edgings and earpet bedding. 4 in. 1s. per pkt.

Erinus-Blue. 4 in. 6d. per pkt.

Erinus Erecta Alba-Pure white. 5 in. 6d. per pkt.

Erinus Compacta (Goldelse)—A new variety, with golden-green foliage and bright blue flowers, thus forming a charming contrast; even as a small plant it is very attractive and of value for borders and pot culture. It is reproduced quite true from seed. 1s. per pkt.

Gracilis—Blue. 4 in. 3d. per pkt.

Speciosa—4 in. 6d. per pkt.

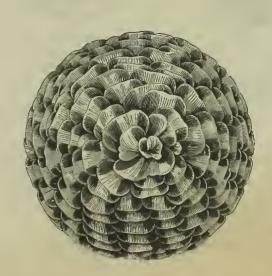

LINUM GRANDIFLORUM RUBRUM.

DWARF LOBELIA.

FRENCH MARIGOLD—CANNELLS' FIRST PRIZE STRAIN.

Perennlal Varletles.

- n.r. Lobelia Cardinalis—Dark green foliage, intense red flowers. 2 ft. 1s. per pkt.
- H.P. Lobelia Fulgens Multiflora—Deep scarlet; splendid. 2 ft. 1s. and 1s. 6d. per pkt.
- H.H.P. Lobelia Fulgens Queen Victoria—Dark red foliage. 2 ft. 1s. and 1s. 6d. per pkt.

Love-in-a-Mist-See Nigella.

Love-lies-Bleeding -- See Amarauthus Candatus.

n.n.p. Lophospermum Scandens (Scrophularinea), Maurandya Scandens—Colour of flowers purple, the roots are fleshy and may be preserved in winter like Dahlia tubers, or it may be treated as an aunual and grown from seed on a hot-bed, and grown out of doors during the summer months. It is a very graceful looking plant, when well grown, for trailing and hanging purposes; of quick growth. Sow in March. 4 to 6 ft. 6d. per pkt.

H.B. Lunaria Biennls, syn. Annua (Crucifera), Honesty—Moonwort—Ornamental, transparent, silvery seed vessels (much used for winter decoration), purple flowers; yery showy. 3d. per pkt.

u.a. Lupinus (Mutabills) Crulckshanki (Leguminosæ)—Splendid hlue and white flowers. 4 ft. 3d. per pkt.

H.A. Lupinus Nanus-Dwarf, blue. 1 ft. 3d. per pkt.

H.A. Lupinus Subcarnosus—Splendid species for beds; flowers blue and white, 1 ft. 3d. per pkt.

u.a. Lupinus Annual Varieties—Finest mixed. 2 ft. 3d. per pkt.

н.г. Lupinus Perennial Varieties-Finest mixed. 3d. per pkt.

н.р. Lupinus Arboreus (The Yellow Tree Lupin)—4 ft. 6d. per

и. A. Lupinus Hartwegi — Very pretty horder species. 2 ft. 3d. per pkt.

н.г. Lychnis Chalcedonica Alba (Caryophyllea)—Flowers white. 2 ft. 3d. per pkt.

n.p. Lychnis Fulgens—Very showy flowers, hrilliaut scarlet. 1½ ft. 3d. per pkt.

H.P. Lychnis Chalcedonica — Fine bold plants, with beautiful heads of scarlet. 2 ft. 3d. per pkt.

H.A. Malope Grandiflora Purpurea (Malvacew)—Very showy annual, forming bushes about 2 ft. high, completely covered with handsome flowers of a shiny crimson-purple, very useful for cutting, and lasts in bloom till frost sets in. 3d. per pkt.

H.P. Malva Moschata Alba Major (Malvacea)—The pure white flowered variety of the British Musk Mallow; an extremely pretty and attractive plant, specially well adapted for cutting purposes; quite hardy. 2 to $2\frac{1}{2}$ ft. 1s. per pkt.

H.H.A. French Marigold, CANNELLS' First Prize Strain (Composita), Tagetes patula—Some blooms were sent to the Gardeners' Magazine, and the following is the reply:—

"H. Cannell & Sons.—Your French Marigolds are really magnificent; we have not seen anything to equal them. The colour and marking is wonderfully bright and decisive, and the form can be summed up in the one word—perfection. A few stands of bloom like those before us would prescut a striking contrast to, and have a great appearance amongst, other cut flowers usually exhibited at this season of the year."

Sow in March, shift into good-sized pot, plant out the first warm weather in May; they will last in bloom till the frost sets in. 1½ ft. 1s. per pkt.

н.н.а. Dwarf French Marigold — Selected from the choicest blooms, and dwarfest plants. $1\frac{1}{4}$ ft. 1s. per pkt.

н.н.а. Marigold, Dark African (Tagetes erecta)—These produce heads of bloom of immense size; at a distance they have the appearance of Dahlias; to be treated the same as Asiers. 3d. per pkt.

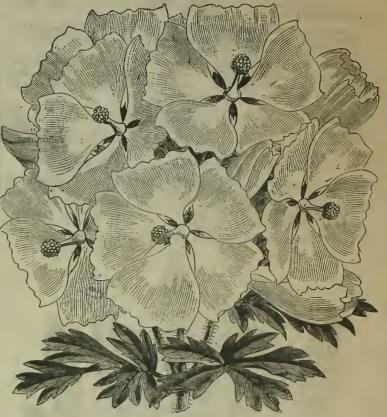

H.H.A. Marigold, Selected African Light Lemon Colour—Extra fine for exhibition. These are equally as fine in quality as the preceding varieties. 3d. per pkt.

н.н.а. Marigold Aurea Floribunda—Oue of the prettiest dwarf yellow bedding plants that we know. 3d. per pkt.

For other varieties-See Tagetes.,

Marlgold, Pot-See Calcudula.

H.H.A. Martynia Fragrans (Pedalinew)—Splendid; hearing fragrant crimson-purple flowers. 2 ft. 4d. per pkt.

MALVA MOSCHATA ALBA MAJOR.

н.н.г. Marvel of Peru, Mirabilis Julapa (Nyctagineæ)—A very picturesque plaut, the diversified colours contrasting well with its dark green glossy foliage; continues in bloom through the summer and autumn; the root may he preserved, like Dahlias, throughout the winter; the hest colours mixed. 2 ft. 3d. per pkt.

illac; deliciously fragrant in evening and morning, and especially after a shower. 1 ft. 3d. per pkt.

MATRICARIA.

H.P. Matricaria Eximia Nana Aurea Crispa Compacta fl. pl. (Composite)—Lovely little cream-coloured quilled flowers, very useful for cutting. It is one of the curled-leaved Feverfews; height ahout 8 inches; a gcm in any garden. 6d. per pkt.

n.n.p. Maurandya Barelayana (Scrophularmeæ)—A most heautiful slender climber, producing abundance of purple and white coloured tuhe-shaped flowers; for trailing up pillars, wirework, &c., is one of the hest plants. Sow from March to May. 6d. per pkt.

и.н. P. Maurandya Barclayana Alba—White. 1s. per pkt.

n.r. Meconopsis cambrica (Papaveracew), Welsh Poppy—Thrives well on rockwork; golden yellow. 1 ft. 6d. per pkt.

H.H.A. Mesembryanthemum Tricolor — Lovely dwarf plants for borders or rockwork. 3d. per pkt.

H.H.A. Mesembryanthemum Cordifolium Variegatum (Ficoidew)—Foliage elegantly variegated with white; a gem for flower heds and hanging haskets. ‡ ft. 1s. per pkt.

H.A. Mignonette, Miles' New Hybrid Spiral—Much admired by the public generally; habit dwarf and branching, with spikes often attaining a length of from 8 to 10 inches; powerful odour. Well adapted for market purposes. 1 ft 1s. per pkt.

n.A. Mignonette, Garaway's White—Much grown as a pot plant for greenhouse decoration during the winter and early spring months; the spikes are not only larger, but the individual flowers are more double and of a much purer white than other varieties, rendering it undoubtedly the best kind for winter blooming. 1 ft. 1s. per pkt.

H.A. Mignonette, Parson's White. 1 ft. 3d. per pkt.

H.A. Mignonette, Red King—The prettiest, highest colonred red, and the most distinct of the whole family. It has also a remarkably neat habit, medium flowers, just the convenient size for cut blooms, and has necharming and striking effect amongst other flowers; much more attractive than the ordinary kinds. 6d. per pkt.

H.A. Mignonette, Crimson. 1 ft. 3d. per pkt., 1s. 6d. per oz.

H.A. Mignonette, Cannells' Perfection (Resedacew, Reseda Odorata)—The great trial of Mignonette. from all parts of the world. at Chiswick brought plenty of splendidly developed specimens before the Floral Committee. The best and the worst were closely scrntinised, and all were nanaimous that this was the finest variety ever yet seen in this country; and we have great pleasure in offering this very kind, which is altogether larger, bolder, and its odour more powerful, and should be grown in every garden. If. 1s. per pkt.

H.A. Mignonette, Golden Queen—A most decided golden hae, which carries a cheer into every houquet or table decoration; wonderfully free and deliciously fragrant. 1 ft. 1s. per pkt.

MIGNONETTE, IMPROVED VICTORIA.

Mignonette, Improved Victoria—Grows only about 6 in. high, of perfectly regular pyramidal habit, and well-formed spikes. The flower is larger and of a more brilliant red than the old Victoria; dark glossy-green foliage; valuable for pot enline, groups, and edgings. Should be planted about 8 inches apart. 1s. per pkt.

H.A. Mignonette—Sweet scented. 3d. per pkt., 9d. per oz.

Mignonette, Matchet—A fine variety, undoubtedly the best for pot culture; habit extremely dwarf, thick dark green leaves, stout flower stalks, which terminate in abundant large and broad spikes of beautifully scented flowers of a bright red colour. ³/₄ ft. 1s. per pkt.

DIRECTIONS FOR SOWING.—Sow in the open ground in April, and in succession throughout the summer, covering the seeds about a quarter of an inch deep. For winter and spring flowering sow in Angust and September, in pots of loam, mixed with a little loaf mould, and protect from frost in cold frame. For early flowering sow in February and March, on a slight hottom heat. Thin out or transplant before the plants get crowded.

g.a. Mimosa Pudica (Leguminosa), Sensitive Plant—Graceful, fern-like foliage, mostly grown as a curiosity, being so sensitive that the leaves close up immediately from the slightest toneh. Must be sown in heat in small pots, and reduced to one or two plants, as they suffer greatly from being transplanted. 1 ft. 3d. per pkt.

H.P. Mimulus Grandiflorus "Brilliant"—Bearing very large and finely formed flowers of an intense bright blood erimson colour; very free. $\frac{3}{4}$ ft. 1s. per pkt.

MESEMBRYANTHEMUM TRICOLOR.

MIMOSA PUDICA (SENSITIVE PLANT).

NEMOPHILA DISCOIDALIS.

- H.P. Mimulus Moschatus (Musk)-A common and well-known trailer. 3d. per pkt.
- H.P. Mlmulus, New Hybrid (Cannells' Hose-in-Hose) An important improvement on the well-known Mimnlns, Hose-in-Hose; of most compact growth and scarcely 3 in. high. The flowers appear in great ahundance, and are horne hut slightly above the enshion-shaped hnsh, which spreads close upon the ground. A fine plant for pots. 1s. per pkt.
- H.P. Mimulus, New Hybrid, Cannells' Perfection (Scrophularinea). Moukey Flower—Single mixed. The colours and markings are extremely novel and richly spotted. \(\frac{3}{4} \) ft. \(1s. \) per pkt.
- Sow Mimulus in heat from March to May, and as soon as they are established give them plenty of air, and, well shuded, they will then produce splendid flowers quite equal to the woodcut.
- H.H.C. Mina Lobata, syn. Ipomœa Versicolor—The seedlings should be grown on in pots until the middle of May, and then planted in the open garden; it makes rapid growth, and producing in profusion semi-erect racemes of flowers of bright red, changing through orange-yellow to yellowish white. 12 ft. 1s. per pkt.

Mirabilis Jalapa-See Marvel of Peru.

- u.r. Morina Longifolia—Highly ornamental, both in folinge and flowers. 3d. per pkt.
- Myosotis Aipestris "Jewel"—A new large flowering variety of the compact growing Victoria kind. 1s. per pkt.
- H.P. Myosotis Alpestris "Victoria"—This beantiful and distinct Forget-me-not claims a prominent place in every garden. The plant grows about 5 or 6 inches high, forming compact globular little bushes which are completely covered with neat flowers of a hright azure blue with a yellow centre. We can safely recommend it, not only for hedding and pot culture, but for ent flowers, carpet bedding and ribhon borders. 1s. per pkt.

MYOSOTIS PAGODA,

- H.P. Myosotis Dissltlflora (Boragineæ), Forget-me-not—One of the best of all of the Forget-me-nots. It is of a remarkably compact habit and a profuse bloomer, having the appearance, when in full flower, of a sheet of most exquisite blue; an exceedingly attractive and heautiful spring hedding plant. 1 ft. 1s. per pkt.
- H.P. Myosotis Dissitiflora Alba—A splendid white variety. 1 ft. 3d, per pkt.
- H.P. Myosotis Pagoda—A beantiful variety of Forget-me-not, blooms in great profusion during the spring and summer mouths; as a bedding variety it is unsurpassable. 3 ft. 1s. per pkt.
- n.p. Myosotis, Pigmy Bedder—The hest dwarf of all the Forget-me-nots, a charming new spring flowering plant, very dwarf and neat in habit, flowering early in spring and continuing in bloom a considerable time; a real gem. ½ ft. 1s. per pkt.

Sow in July or August in open ground, or in slight hot-hed in Fehruary Nasturtiums—See Tropwolum.

- H.H.A. Nemesia Versicolor Compacta (Scrofularinew)—Very neat, hushy, profuse-blooming plants; they commence flowering when a few inches high, and continue in beauty for months. 1 ft. Mixed, 3d. per pkt.
- H.A. Nemophilas (Hydrophyllacew)—These charming and nseful dwarf-growing hardy annuals have a neat, compact, uniform habit of growth, with shades and colours the most strikingly heautiful; arranged in any style which the fancy may suggest, the effect is pleasing and very striking in the extreme; sow in autumn for spring hedding.
- п.а. Nemophila Atomaria, syn. Menziesii—White, shadiug to light blue, dotted with blackish spots. ½ ft. 3d. per pkt.
- H.A. Nemophila Discoidalis—Velvety black, edged white. $\frac{1}{2}$ ft 3d. per pkt.
- $_{\rm H.A.}$ Nemophila Insignis Grandiflora—Lovely hlue, white centre. $\frac{1}{2}$ ft. $_{\rm 3}d.$ per pkt.
 - H.A. Nemophila Insignis Alba—Pure white. ½ ft. 3d. per pkt.
- H.A. Nemophlla Maculata Grandlflora—White and violet, $\frac{1}{2}$ ft. 3d. per pkt.
 - H.A. Nemophila, Mixed. 3d. per pkt.
- H.H.P. Nertera Depressa (Rubiaceæ), Bcad Plant—This charming little plant, with its crimson bead-like herrics close to the ground, forms a dainty cushion for a carpet hed in summer, and is likewise very ornameutal when grown in pots for the front of a greenhouse stage. It is also a valuable acquisition for rockwork. 2 in. 1s. per pkt.
- н.н.а. Nicotiana Atropurpurea Grandiflora—6 ft. 6d. per pkt. н.а. Nigella Hispanica (Love-in-a-Mist)—Brown and white. 1½ ft. 3d. per pkt.
- H.A. Nolana Atriplicifolia (Convolvulacea)—Pretty low growing plant; blue, white, and yellow flowers. 3d. per pkt.
- н.н.а. Nyeterlnia Zaluzianskia Selaginoides (Scrophularineæ)
 —Beantiful miniature plant covered with blossom, well suited for rockwork and edgings. ½ ft. 4d. per pkt.
- H.P. Enothera Macrocarpa, syn. Missouriensis Latifolia (Onagrariew), Evening Primrose—Limmense flowers of a rich yellow colour. I ft. 3d. per pkt.
- H.P. Enothera Taraxacifolia Large and heantiful silver-white flowers; dwarf. $\frac{1}{2}$ ft. 1s. per pkt.
- n.n.r. Onopordon Acanthium (Cotton Thistle)—Can be effectively used in a variety of ways, of bold habit and vigorous growth, branching stems 5 ft. high, covered with long-whitish, cobweb-like hairs, flowers purplish. 3d. per pkt.
- н.н.р. Oxalis Rosea (Oxalidew)—Rosy-purple; very desirable, free bloomer. 6d. per pkt.
 - н.н.р. Oxalls Rosea Alba Pretty pure white variety. 1s. per pkt.
- H.P. Oxlips, Primula Elation (Frimulacew)—Are a grand sight; their many colours and profuse thowering render them a most interesting class. 1 ft. 6d. per pkt.

Asters, Stocks, and Zinnies were good and much admired.

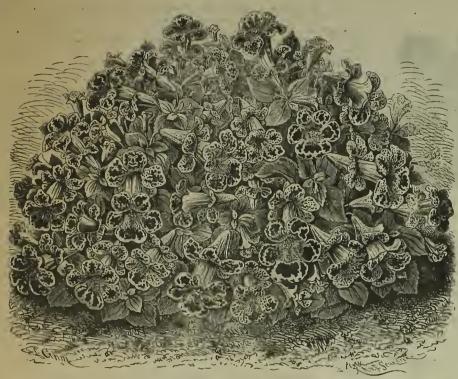

Pansics raised from your seed are now in bloom, and simply lovely.

Mr. S. Castle, The Vineries, Fordingbridge, September 2nd, 1893.

Rev. S. R. Wilkinson, Marlow, May 23rd, 1893.

Mr. W. E. Corden, The Depôt, Wakefield, August 10th, 1°93. I am glad to tell you the Fancy Pansy seed I had of you turned out first class.

B. H. FRIEND, Esq., Legislative Assembly, Sydney, Australia, August 26th, 1893. The Aunnals are again a great success. Pausies are certainly the finest I have seen in Sydney.

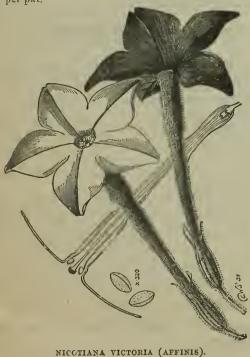

BEDDING MIMULUS.

PERFECTION MIMULUS

MIMULUS (HOSE-IN-HOSE).

n.h.a. Nicotiana Colossea — Amongst ornamental foliaged plants coming to periection the first season from being sown this ranks foremost. It is an annual (perennial when grown under glass), attaining a height of 5 to 6 ft. in the open ground. The leaves, of ahout 3 ft. in length by 18 to 20 ins. in hreadth, are erect at first, gracefully bending down successively. When young they are downy and of a reddish tint, changing to a glossy dark green later on, this lovely green contrasting beautifully with the reddish-brown ribs. The plants being of branching hahit and of robust growth, and the leaves being very tough, are never damaged by wind or rain. It is well adapted for sub-tropical gardening, either as single specimens or for groups, with other ornamental-leaved plants. 1s per pkt.

n.H.A. Nicotiana Macrophylla Gigantea — 6 to 10 ft. 6a.

H.H.A. Nicotiana Victoria Affinis (Solanacew), Tobacco—This is a most extraordinary plant: 1stly, hecause it is a Tobacco plant, and yet so different, both in growth and flowers, to the ordinary kind; 2ndly, because of its producing such splendid pure white noble flowers on long terminal tunes, with such a delicious scent; 3rdly, when its gigantic white Bouvardia-like flowers are fully expanded in the evening and early morning it has a most striking effect, and perfumes the whole surrounding atmosphere. It is, beyond donht, the greatest novelty of the garden. In our nursery it has been the amazement of all, and the result of several hundreds of packets of seeds being sold. Very free; and only attaining the height of $2\frac{1}{2}$ ft. in any ordinary soil. 1s. per pkt.

п.н.а. Nicotiana Wigandioides—Attains immense size. 10 to 12 ft. 6d. per pkt.

Tall, handsome foliage plants of rapid growth: very snitable for shrubheries, horders, or sub-tropical gardens. Other varieties can be supplied.

и.н.р. Nierembergia Frutescens (Solanacea)—Valuable for pots or out of doors; flowers white, veined lilac. 1 ft. 6d. per pkt.

п.н.р. Nierembergia Gracilis — Charming plants for edgings hanging baskets, or rockwork. 3 ft. 6d. per pkt.

NIGELLA DAMASCENA (FENNEL FLOWER).

H.A. Nigella Damascena (Ranunculacew), Devil-in-a-Bush—Blue. 11 ft. 3d. per pkt.

Cannells' Pansies (Viola tricolor)—We grow the largest and most complete collection of all this family in the kingdom. Pansies and Violas form a separate department in our gardens; for years we have heen improving all classes, the Rainbow section in particular, these varieties possess more real salvia blue colour than any other kinds, and are favourites with every one. The seeds we now offer—if the plants are put in open beds, previously deeply dug, and manured good ground—will be a charm indeed; they are not large, but lovely in the extreme.

H.P. Dr. Sankey's Striped—For many years this gentleman, the oldest and most successful hybridiser and raiser of flowers in the world, has so improved these kinds that they will now and for henceforth form a very distinct class: colours wonderfully bright and attractive, and gives us a new feature in l'ansies. \(\frac{1}{2} \) ft. \(1s. \) per pkt.

H.P. Eynsford Sweep—The best black Pausy in cultivation. When exhibited in the great show at the Temple Gardens it caused quite a furore amongst all beholders. ½ ft. 1s. per pkt.

H.P. Pansy-Mixed from a good strain. 6d. per pkt.

H.P. * Pansy, Fancy—Onr collection is one of the finest and largest in the kingdom, flowers possess most beautiful markings, and blotched with more brilliant and curious colours than we have in any other flower. ½ ft. 1s. and 2s. 6d. per pkt.

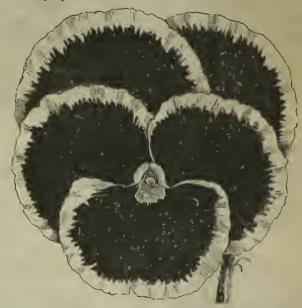

* It should be distinctly understood, and undoubtedly so, that many mistakes and disappeintments arise from the name "SHOW PANSY," for that title is misleading to young beginners and amateurs. The Pansy shown under that heading is very small and of only one or two colours, and but seldom shown at exhibitions, nowadays. Formerly it was the enly class of bloom staged; but since the introduction of the "Fancy Pansy" they have quise excelled the old "Show." Many persons therefore think because the Fancies are the only kinds met with at all the large exhibitions they are "Show Pansies." That is not so, for the difference between them are as distinct as Show and Fancy Dahlias. One is limited to a few colours, whereas tho other has a much wider range of colour, and also larger flowers and breader petals, the markings not so even and regular in their colouration as the old Show Pansy. We wish all our customers to make themselves thereughly acquainted with these observations when ordering their Pansy Seed.

Seeds in either 6d.,
1s., 2s. 6d., or 5s.
packets are all
exactly of the same
quality.

RAINBOW PANSY.

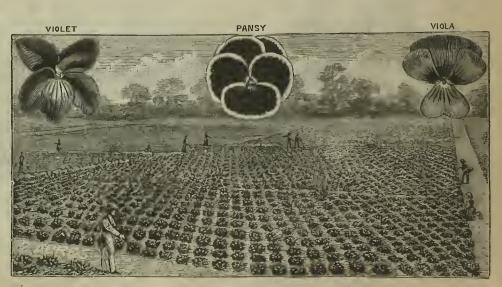

- H.P. Pansy Rainbow—No Pausies are so lovely and elegant as these, not on account of their great size as their surprising colonrs, almost every shade can he seen in them; but a bright blue and purple prevails blended one into the other, hence its name; they are most deliciously seented and free flowering, and the surprise of all, in our opinion they will give something more than satisfaction. ½ ft. 1s. and 2s. 6d. per pkt.
- H.P. Pansy Show, Extra Choice, Mixed—Saved from our acre of Pansies, the finest collection in the South of England. ½ ft. 1s. and 2s. 6d. per pkt. See Collection.
- H.P. Pansy Snow Queen—We have many white Pansies, but none can compare with this; it is so white and pure that all others appear dirty when planted by the side of it; therefore the effect is most pleasing. It is certainly one of the best novelties introduced amongst Pansies for years. 4 in. 3d. per pkt.
- H.P. Pansy Trimardeau (Viola tricolor maxima)—An entirely distinct and beautiful new race, which will commend itself to all lovers of this popular flower. The plants are of vigorous though compact habit, the flowers carried well, and each one is marked with three large hlotches or spots; they are exceedingly large, and most varied shades of colour. ½ ft. 1s. and 2s. 6d. per pkt.

CANNELLS' IMPROVED FANCY PANSY.

STRIPED PANSY

OUR FIELD AT EYNSFORD.

CANNELLS' RE-SELECTED PAPAVERS.

PAPAVER NUDICAULE (ICELAND POPPY).

Papavers, or Poppies (Papaveracew)—All those who want the gayest garden with the least trouble and expense, by all means try a packet of our Poppy. Simply seatter the seed over the ground, one hoeing, and you will have ten rods of ground a mass of colons for months; ours was a great sight lest year. a grand sight last year.

Papaver Alpinum Roseum-Of the same dwarf habit as the white, yellow, and orange varieties already in commerce, but of a beautiful rose colour; a fine addition to this already charming class of Alpiue Poppies.

PAPAVER DANEBROG.

H.P. Papaver Bracteatum—Red, with hlack blotches. 2½ ft. 3d. per pkt.

H.A. Papaver Cary-ophylloides (Carnation Poppy) — Finely fringed edge; very pretty 2 ft. 3d. per pkt.

H.A. Papaver Dane-brog (Danish Flag Poppy) —Of striking effect. The flowers are of a hrilliant searlet colonr, bearing on each of the four petals a large silvery white spot, forming thus a white cross on scarlet ground, similar to the Danish and Swiss national hanners. Very desirable and showy 3d. per pkt.

H.A. Papaver Glaucum (Tulip Poppy)—New and very showy annual Poppy, about 2 feet high, with glaucous foliage and fine shaped large flowers of the most brilliant deep scarlet. The flowers, 4 inches in diameter, keeping their beauty for several days, and the buds expanding each day, the plants are continually in full bloom during the greatest part of the summer. The two outside petals are of double the size than the inside ones, so that each couple form a round cup by themselves, and resemble somewhat the early flowering single Tulips. Seeds are of slow germination.

н. A. Papaver Murselli, Mikado—Beautifully cut and fringed; colour, at the back white, edges erimson scarlet. 2 ft. 3d. per pkt.

н.г. Papaver Nudicaule (Iceland Poppy)—Mixed or in separate colours. 6d. per pkt.

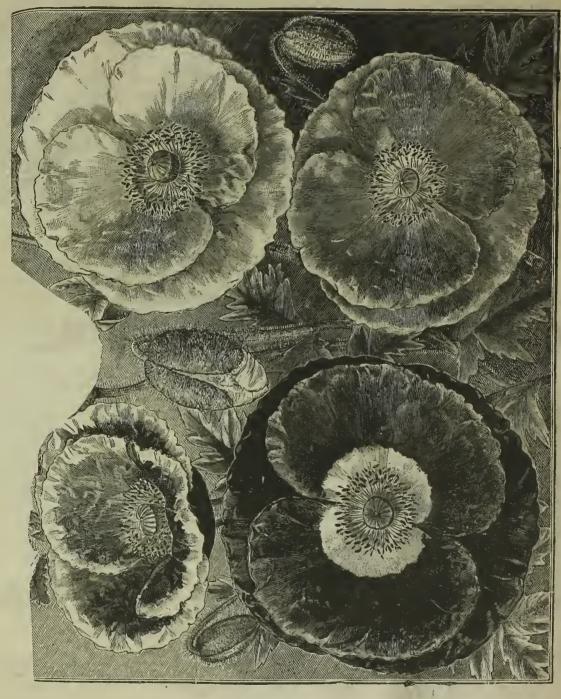

PÆONY-FLOWERED POPPY.

PAPAVER UMBROSUM.

Papaver Nudicaule Coccineum fl. pl.—New donhle-flowering form of the bright orange-scarlet variety of the Iceland Poppy, producing about 40 to 50 per cent. of true plants with perfectly double flowers. The different varieties of this lovely Poppy, ranging amongst the most attractive of early flowering perennials, and having become great favourites in all countries, we think that this new variety will be greeted as a valuable addition to this tribe. Le per plate addition to this tribe. 1s. per pl.t.

H.A. Papaver Somniferum Fimbriatum (Double-friuged Garden Poppy)—These produce a great variety of colour, an' mule a grand display. 2½ ft. 3d. per pkt.

CANNELLS' SELECTED SHIRLEY POPPIES-MOST LOVELY COLOURS.

II.A. Papaver Somniferum Fimbriatum (Double White)— 2½ ft. 3d. per pkt.

H.P. Papaver (Poppy) Umbrosum—The most beautiful dwarf single Poppy; somewhat resembles the ordinary field kind in growth, but a most vivid red, with a large intense black blotch at the base of each petal, rendering it most striking and surprising; it is really one of the hest. 1 ft. 3d. per pkt.

The seed should be sown in the autumn, grown on through the winter, and planted ont in early summer. They will then make a grand display. (Applies to P. Umbrosum and Iceland varieties only.)

H.A. Papaver Lævigatum—Fine-shaped large flowers, 4 inches in diameter, of a brilliant deep scarlet with black spots, surrounded by a white

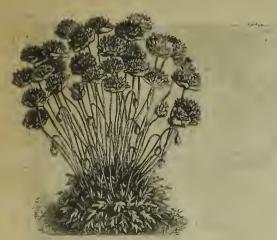

margin at the base of each pctal. The two outside petals of the flowers are twice the size of the inside ones, so that each couple form a round cup by themselves; very free flowering and extremely showy. 1½ ft. 6d. per pkt.

themselves; very free flowering and extremely showy. 1½ ft. 6d. per pkt.

H.A. Papaver Mephisto—Prettily fringed; red, black, rose, and white. 2½ ft. 3d. per pkt

H.P. Papaver Orientale—Deep scarlet with hlack hlotches; a grand border plant. 2½ ft. 3d. per pkt.

H.A. Papaver Pavonium (Peacock Poppy)—The most striking feature of the flower is the conspicuous glossy hlack zone which marks the petals near the base, the united hands forming a complete ring, which shows to a great advantage on the brilliant scarlet ground colour, during the early part of the day. When fully expanded they are nearly four inches across, and are horne in considerable numbers. 6d. per pkt.

PAPAVER NUDICAULE COCCINEUM FL. PL.

H.A. Papaver Pæonifiora (Pæouy-flowered Poppy)—These showy douhle-flowering Poppies are well known as effective additions to mixed borders and large gardens and for ornamental shruhberies. 3 ft. Finest mixed, 3d. per pkt.

u.r . Papaver Prince of Orange-Pretty. 6d. per pkt.

Poppy Welsh-See Meconopsis.

H.P. Papaver Salmon Queen-Distinct. 6d. per pkt.

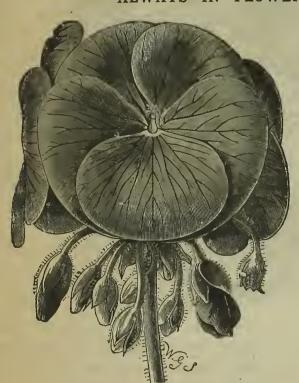

H.A. Shirley Poppy (Rhwas, vars.).—Of all the Poppy trihe the Shirley strain gives us the loveliest of colours, combined with exquisite form and the most remarkable floriferonsness. To have the plants at their best, and flowers in finest form, seed should he sown quite early in September, so that the plants may be dibbed out singly some 15 or 18 inches apart in good rich soil. although seed sown in spring does very well indeed if sown very thinly. 1½ ft. 3d. and 6d. per pkt.

OUR ZONAL PELARGONIUMS.

ALWAYS IN FLOWER.

SEE "FLORAL GUIDE."

CANNELLS' ZONAL PELARGONIUM.

Peas-See Sweet Peas.

Pelargonium, Fancy-The choicest. 11 ft. Mixed. 2s. per pkt.

Pelargonium, French Spotted-2 ft. 2s. per pkt.

Pelargonium, Gold Bronze-12 ft. 2s. 6d. per pkt.

Pelargonium, Show-The finest large Flowering sorts. 2 ft. Mixed, 2s. per pkt.

Pelargonium, Zonal (Geraniacece)—Without doubt we have the finest and best collection of Zonal Geraniams in the world—both men and houses are entirely devoted to their culture. One large bouse contained upwards of 600 specimen varieties, exclusively for trual and seeding. The number heing gradually reduced to 200 of the very choicest, including many of those now offered for the first time in this Catalogue, we can therefore confidently say the seed now offered is far superior in quality to any other yet introduced to the public, and cannot fail to bring forth some startling improved varieties, as it is carefully hybridised with only the very choicest kinds, and every known method of fecundation is adopted to effect thorough crosses. 2 ft. 1s. per pkt.

Pennisetum-See Ornamental Grasses.

H.P. Pentstemons (Scrophularinear) — Saved from our own Catalogue collection, which embraces all the bestup to the present, including every new variety, and cannot fail to produce flowers of superior quality. ls. per pkt.

Pentstemon Azureus Jaffrayanus - A heantiful and valuable herbaceous perennial, erect spikes of rich azure hlue flowers, produced continuously from June to the end of December. 1½ ft. 1s. per pkt.

nr. Pentstemon Murrayanus—A beautiful rich scarlet-coloured variety. 2 ft. 6d. per pkt.

Sow in March in paus, using light soil, and place in a dark frame and gentle heat; prick out into other paus when strong enough to handle, and continue to grow on freely in heat until established, then gradually harden off. By the end of May they can be planted out 18 inches apart, into good soil and open situation.

H.H.A. Perilla Nankinensis (Labiate)—A distinct and useful orunmental plant; leaves dark reddish mulherry; desirable for masses and lines in flower gardens. $1\frac{1}{2}$ ft. 3d. per pkt.

н. A. Phacelia Campanularia (*Hydrophyllacea*)—Iu habit it resembles the well-known *Whitlavia grandiflora* (which is now placed by hotanists in the genus Phacelia), but has a much more spreading and hushy hahit of growth, and is therefore more floriferous; an average plant will cover niue square inches of ground. The greatest attraction of the plant consists in its large and numerous flowers, of the finest deep gentian sating blue, of a shade rivalling that of Salvia patens, produced in terminal racemes of from 12 to 20 hlossoms, which are developed in succession. Each flower is about three-fourths of an inch across, of an erect campanulate form, with a spreading five-lohed limb, and short funnel-shaped tube, marked in the throat with fine ohlong white spots. 1 ft. 6d. per pkt.

Physalis Alkekengi (Solanaceae), Winter Cherry-A curious perennial, with white flowers, succeeded by numerous transparent red berries. 3d. per pkt.

Picotee -See Carnations.

H.P. Pink (Dianthus) (Caryophyllacew)—All from our unrivalled collection. saved only from splendid flowers, and cannot fail to produce some first-class new varieties. 1 ft. See Collection in Floral Guide. 2s. 6d.

per pkt.
Sow the seed about May, and treat the same as recommended for

Carnation's.

PINK MODEL BLOOM.

н.в. Polemonium Cæruleum (Polemoniacew), Charity, Greek Valerian, Jaeob's Ladder—Elegant fern-like foliage. 2 ft. 3d. per pkt.

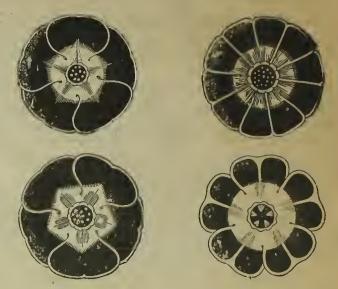

n.P. Polemonium Album-White. 2 ft. 3d. per pkt.

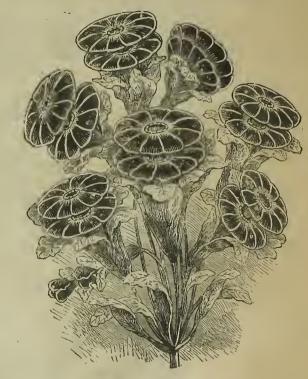

POLYANTHUS.

H.P. Polyanthus (Primulaceae)—Named varieties. ½ ft. mixed. 1s. per pkt. Choice

H.P. Polyanthus (Gold Lace)—We have great pleasure in offering seeds of our well-known choice collection, the best in the south of England. $\frac{1}{2}$ ft. 1s. and 2s. 6d. per pkt.

THE CHOICEST COLLECTION OF POLYANTHUS IN ENGLAND.

POLYANTHUS, HOSE-IN-HOSE.

Sow in pots from February and place in a gentle heat, when the seedlings are strong enough prick out into other pans, and when well established harden off. Transplant in a shady border, free from drip, 6 inches apart.

n.r. Polyanthus, Hose-in-Hose-Finest mixed. 1s. 6d. and 2s. 6d. per pkt.

n.n.p. Cannells' Petunia (Solanaceae) - It is surprising this n.n.p. Cannells' Petunia (Solanaeea)—It is surprising this family is not more largely grown, considering how easy they are to cultivate, and if well grown, what grand things they are, both for decoration and exhibition. Treat them similar to a Verbena; choose nice young plants about March, or any time up to July; give them good shifts and rich soil, well stake out, and you will be highly gratified, for some are certainly surprisingly large; colours not equalled by any other flower. The finest varieties ever offered. varieties ever offered.

H.H.P. Petunia Hybrida-Finest mixed for bedding. 6d. per pkt.

(99) н 2

landsome and distinct variety of the largest flowering class, with deep violet flowers. About 30 per cent. of the seedlings bear double flowers, and the remaining single ones are of the same rich and effective shade of colour. 1s. 6d. per pkt.

H.H.P. Petunia Hybrida Nana Compacta (Dwarf Inimitable Petunia)—Each plant forms a complete and densely branched bush, 5 to 8 inches high by as much in diameter, resembling a naturally-grown bonquet. Flowers a brilliant cherry-red, and each one is marked with a regularly-formed white star. Profuse bloomer; seedlings, when only 3 inches in height, begin to unfold their charming flowers. 1s. per pkt.

H.H.P. Petunia Grandiflora Fimbriata—Flowers are of great size; the colouring of the throat extends to the middle of the petals. Unusually beautifully veined, and the colouration of flowers rose, crimson, and purple lines, which reflect a metallic tinge. 1s. and 2s. per pkt.

H.H.P. Petunia Nana Compacta Multiflora fl. pl. (Lilliput, double)—Producing dwarf and dense bushes upon which are borne very numerous and exceedingly pretty small double flowers of the most charming shades of colour; they are in part spotted and striped, and part self-coloured, giving the plant a very pleasing appearance. 1s. and 2s. per packet.

н.н.р. Petunia Grandiflora Fimbriata fl. pl.—Large-flowering couble-fringed Petunias. 1s. 6d, and 2s. 6d. per pkt.

PETUNIA HYBRIDA NANA COMPACTA.

Cannells' Double Petunia.

I must tell you all your steds have given us great satisfaction, especially the Petnnias and Pelargoniums.

CANNELLS' RE-SELECTED PHLOX DRUMMONDII.

CANNELLS' PHLOX DRUMMONDII.

H.H.A. Phlox Drummondii Grandiflora (Polemoniacew)—These comprise the most brilliant colours imaginable; the flowers are larger than those of the older kinds, and of finer substance. We consider it safe to observe that there is no known annual which will more amply repay any care bestowed upon it. 1 ft. The finest mixed, 1s. per pkt.

H.H.A. Phlox Drummondii Grandifiora Alba—Flowers pure white; very useful where cut flowers are in demand. 1 ft. 1s. per pkt.

H.H.A. Phlox Drummondii Grandiflora Splenders—Refnlgent scarlet-red flowers, rendered further remarkable by a large white eye, the centre of which is encircled with a well-defined violet edge. 1 ft. 1s. per pkt.

Phlox Drummondii Isabellina fl. semipleno.

Phlox Drummondii purpureo-marmorata fl. semi-pleno.

Two new semi-double flowering varieties, the former with pale yellow, the latter with dark purple, rose marbled flowers. They reproduce the n-selves true from seed, each colour separate. 1s. per pkt.

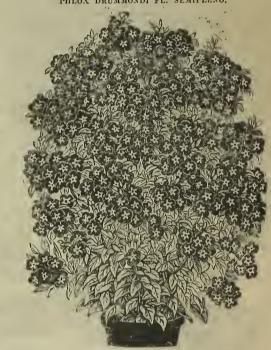

Phlox Drummondii Lutea fl. pl.—A very pretty yellow flowering variety, comes quite true from seed, and possesses a slight perfume. In order to produce the best double flowers these Phloxes should be grown in light soil. 1s. per pkt.

PHLOX DECUSSATA

PULON DRUMMONDI FL. SEMIPLENO

CANNELLS' RE-SELECTED PHLOX DRUMMONDII

H.H.A. Phlox Drummondii (Mixed)—Very handsome useful snamer and autumn bedding plants; the flowers, which vary from white to purple and rich crimson, are borne in great profusion many months in snecession. 6d. per pkt.

n.n.a. Phlox Drummondii Fimbriata—The petals of all the known Phlox varieties are entire, but in this variety they are partly fimbriate, partly three-tootbed, the centre-teeth are almost twice as long as the lateral ones, all distinctly bordered with white, which, together with the bright eye of the centre, picturesquely contrast with the magnificent velvety colours, consisting already of more than twenty-five very splendid distinct colonrs. We offer it in finest mixture. 1s. per pkt.

n.n.a. Phlox Drummondii Cuspidata ("Star of Quedlinburgh")—This novelty, which has been obtained from the Phlox Drummondii Fimbriata, is slightly more compact than tbut variety. The size of the flower is the same, but the pointed centre-teeth of the petals (five in number) are five to six times as long as the lateral ones, and project beyond them like little spikes \(\frac{1}{4} \) to \(\frac{1}{2} \) inch long, giving the flowers a distinctly-marked, regular, starlike form, whose beauty is enhanced by the broad white margins which borders the edges of the petals. This novelty will prove to be one of the finest flowers for fine bouquets, pot flower, market purposes, or open ground. Offered in finest mixture of nearly twenty colours. 1s. per pkt.

H.P. Phlox Decussata (Perennial Phlox)—From the finest collection. 3 ft. Mixed, 1s. per pkt.

Picotee - See Carnation.

For the convenience of our customers separate colours can be supplied of the various classes of Phlox Drummondii. See Collections, page 53.

PHLOX DRUMMONDII CUSPIDATA.

ning. Petunia (Large-flowering Yellow-throated) Grandiflora Intus Aurea.

The yellow-throated Petunia now offered, and which, after several years' careful selection, has at last heen successfully fixed, constitutes a class of rare beauty. The characteristics are large-sized flowers of faultless form, with a broad and deep yellow throat, which is generally veined after the manner of the Salpiglossis. The latter colouring heightens the effect of that of the outer surface of the petals, and completes the heauty of the entire flower.

1s. and 2s. per pkt.

Our Petunia Seed is well known to be the best in England.

Mrs. H. Slocombe, The Gardens, The Rookery, Wellington, Somerset. June, 1893. The plants from your Gloxinia seed are now in flower, and indeed grand.

Mr. S. Taylor, Gardener to Dr. Harpen. Barnstaple, February 17th, 1893. I have Printulas with blooms 2½ inches across. Thanks for such good seed.

Mr. H. Eastry, Florist. Great Cornard, May 29th, 1893. Wherever the English language is spoken Cannell's Primulas are known and admired. The quality of your seed is splendid.

CANNELLS' PRIMULAS.

Qur Strains are well known to be the best in the World.

We have been Awarded more Certificates by the Royal Horticultural Society for the excellency of our strain and varieties than any other Firm.

OUR PRIMULAS AT SWANLEY.

For New Varieties, see coloured paper in front of Flower Seeds.

Out of 400 packets of Seeds and 16 Competitors at the

WORLD'S COLUMBIAN EXHIBITION, CHICAGO,

Our Varieties received more Honourable Mentions than any other Firm, and in confirmation of this see the following Testimonials, which were sent to us by our esteemed customers unasked for, thus showing the superiority of our Strain.

G. Jemmison, Esq., Drawer J. Fort Gatriot, Michigan, U.S.A., March 10th, 1893.

I was at the World's Fair grounds lately and saw the variety of Primulas in bloom, and was pleased to see the name of II. Caunell among the list of strains, especially when I found that they excelled all others by far.

Chas. W. Hofft, Esq., Nashua, N.H., U.S.A., April 21st, 1893.

I saw your Primulas at the World's Fair, and found them much superior to all others there.

For other valuable cultural remarks, see Cyclamen, Calceolarias, and Cinerarias.

It is well known that our collection, solely for seeding purposes, is the choicest in the world, and are throughout the winter a sight worth seeing, for the new kinds possess such hrilliancy of colour that they totally eclipse the older ordinary rose-coloured varieties; were it needed, we could append numerous extracts from every Horticultural Journal and other testimonials. (See Report of the Royal Horticultural Floral Committee Meetings.)

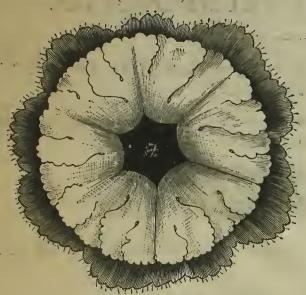

HOW TO GROW PRIMULAS.

OW often and how true it is remarked that England could donhle its present produce if the art of enlivation was better understood. The precisely same remark applies to Primulas—and. in fact, to all flowers, three-parts of which are positively starved and ill-treated. First, make yourself master of what creates health and vigour in a plant, and what will injure it. and its effect, and what loss is sustained by that injury. To thoroughly understand all this, see all our cultural remarks, particularly "How to grow soft-wooded plants to the height of perfection." Sow the seed in May, and again in Jnne, on a level surface of soil, composed of two parts rotten turfy loam. one of partly rotten lesf mould, one of decayed cow-manure, and a small quantity of sea-sand; this mixture of soil will

do for all growths and potting. Just cover over the seed with some light material (sifted cocoa-unt fibre is the best), water lightly, but thoroughly, place in total darkness, and in a few days examine and give light and air; the moment the seed leaves appear gradually expose, and prick out, as soon as they can be haudled, into small pots; shade, and at all times keep them as near the glass as possible (a cold frame is the best place up to the first cool weather in September), slightly shade from hot sun, and as soon as the roots make their appearance in the drainage-hole shift into 5 or 6-inch pots; he careful that this is done in a clean skilful manuer, by not dirtying the foliage nor injuring the roots; pot firmly, pressing the soil down as tightly as you can with the forefinger; be sure that the soil is neither too wet nor too dry; sprinkle well, and shade and shut up rather closely for a few days; water with perfectly clear rain-water; and as soon as the plants show the flower-stein give them weak liquid manure once a week, and all the moisture yon can without creating any damp or mould; keep in a temperature of from 50° to 60°, and one regular moisture at the root is the great secret of success, so that the soil never shows the centr, vigonr is gone for the season. Often seedsmen and nurserymen are blamed for sending wrong and inferior kinds, and their engravings and descriptions set down as pnff.

PRIMULAS (PRIMULA SINENSIS)

(Primulacea).

CANNELLS' WHITE PERFECTION.

White Perfection—The loveliest and the most perfect in bahit, flower, and freeness, and stands at the head of this class. In February (1887) it was exhibited in between two which were expected to excel it, but it far distanced them by long odds, and confirmed the fact that no other variety raised is near its equal. 9 inches. First-Class Certificate. 2s. 6d. per pkt.; smaller pkts., 1s. 6d.

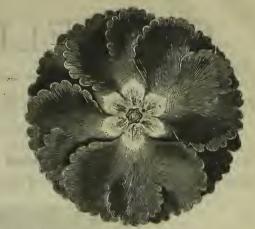

CANNELLS' SWANLEY BLUE.

Swanley Blue-Identical, or nearly so, with what has been shown as blue colour. It is a beautiful mauve, perfectly distinct, and one of the most uncommon coloured Primulas of the whole collection; very striking. 9 in. 2s. 6d. per pkt.; maller pkt. 1s. 6d.

CANNELLS' IMPROVEMENT—The highest hright red, is a grand march onwards of the Swanley-Red type; habit, size, substance, and fiery colonr of its flowers far excels all others, except our new ones; bahit and freeness, together with its fine flowers, constitute it a gem. 9 in high. First-Class Certificate. 2s. 6d. per pkt.; smaller pkt. 1s. 6d.

Cannells' Pink-Is acknowledged to be the most perfect Primula ever raised; colour, the most lovely of pinks ever seen, nearly resembling the tint at the base of the petals of La France rose. By carrying your thoughts to that flower you can readily imagine the grandeur of this variety, the largest bloom and the finest habit. The value can readily be seen. 2s. 6d. per pkt.; smaller pkt., 1s. 6d.

Intensity-A high colonred red, large flower, and hest habit of all the Swanley Red class. 9 in. 2s. 6d. per pkt.; smaller pkt. 1s. 6d.

CANNELLS' IMPROVEMENT, DEEP RED.

PRINCESS MARY.

Princess Mary-Our variety named White Perfection is known and Princess Mary—Our variety named White Perfection is known and valued throughout the world. This is also a pure white, but of the bighest quality flower, so overlapping is its petals that it well-nigh resembles the outline of a gigantic double. Its fimbriation is not approached by any other kiud; habit good; and very free. Those who have honoured us with a visit have probably observed the lovely parsley-shaped leaves. The original was called Crispifolia, but its flowers were of the poorest description. The question was to put a really good flower on this ornamental foliage plant, and after years of attentive work and many disappointments we at last suggested in raising a variety possessing the covered price; and foliage plant, and after years of attentive work and many disappointments we at last succeeded in raising a variety possessing the coveted prize; and after our esteemed customers have seen a flower, we quite expect one and all to say, "We are quite entitled to a gold medal from the nation." At all events, of this we are quite certain, that if placed before anyone interested in such matters, they would say and write as we have done. 9 in. 2s. 6d. per pkt.; smaller pkt., 1s. 6d.

Swanley Giant—A large form and colour of the old coloured kinds. Seed very scarce. 2s. 6d. and 5s. per pkt.

Lilacina—Plain lcaf. 2s. 6d. per pkt.; smaller pkt., 1s. 6d. Lilacina—Fern leaf. 2s. 6d. per pkt.; smaller pkt., 1s. 6d. Cannells' Market White—Plain leaf, light foliage.

1s. 6d.

Cannells' Market White-Plain leaf, dark foliage. per pkt.

Cannells' Market White—Fern leaved. 1s. 6d. per pkt.
The three above-mentioned varieties are especially offered to those who grow for market, and for that purpose are unsurpassed. Habit of plant, size and substauce of flower, is all that can be desired, and we can with confidence recommend them.

Mixed-Containing nearly all the above kinds. 2s. 6d. per pkt.; smaller pkt. 1s. 6d.

Primula Sinensis Fimbriata fl. pl. (Double)

Fringed, donble white. Per pkt., 2s. 6d. and 5s.

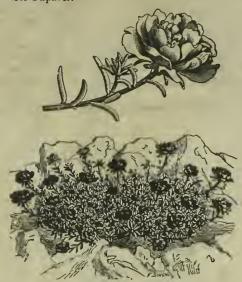

,, ,, brilliant magenta-red. Per pkt., 2s. 6d. and 5s.

,, red and white mixed. Per pkt., 2s. 6d. and 5s.

Our four houses, each 100 feet, from November to May presents the most wonderful sight ever seen.

H.P. Primula Japonica (Japanese Primrose)—A superb Alpine species, which has proved itself perfectly hardy; well known. 1½ ft. 1s. per pkt.

Poppy-See Papaver.

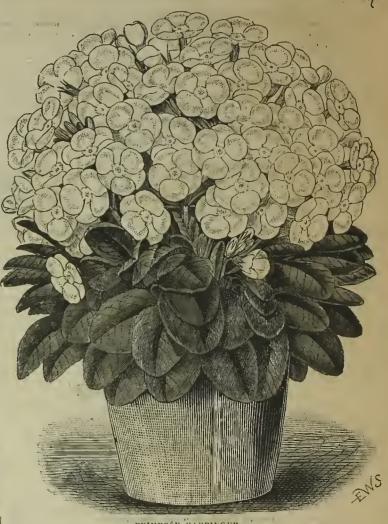

PORTULACA GRANDIFLORA FL. PL.

H.H.A. Portulaca Grandifiora fl. pl. (Portulacea)-For brilliant, beautiful, and delicate flowers, this charming genus stands unrivalled; and, whether in baskets, beds, edgings, or rockwork, its large, splendid flowers, produced in the greatest profusion, are extremely effective; succeeds best in light, gravelly soil. Must be exposed to the full glare of the sun.

H.H.A. Portulaca, Single-6d. per pkt.

PRIMULA ORCONICA

PRIMROSE HARBINGER.

H.F. Primrose Harbinger-We are now able to offer seed of this magnificent White Primrose, which is far in advance of all other whites. 1s. per pkt. H.P. Potentilla (Rosacea)—Handsome herbaceous plants. $1\frac{1}{2}$ ft.

Finest mixed. 6d. per pkt.

H.P. Cannells' Primrose (Hybrid)-Extra fine, many colours, saved from our time seedling varieties. Keep the seed moist and cool; some will germinate soon after sowing; others much later. 1 ft. 1s. per pkt.

н.в. Primrose, Common Yellow—True; seed gathered from plants growing wlld. ½ ft. 6d. per pkt.

H.P. Primrose, "Beaconsfield Primroses," or Fancy Polyanthus—All are familiar with the ordinary yellow primrose, and probably with some few of the colonred varieties, but very, very few, have the slightest idea of the grand varieties originating from the result of long and careful hybridising and selection: strong growers and most abundant bloomers; flowers of immense size, and of such colour and shape that many will not be prepared to believe, for the simple reason they have not seen anything to approach them; colours varying from a blue purple, dark maroon-scarlet, yellow, white, and a hundred other intermediate colours. None will dispute them, and we gnarantee that they will give more than satisfaction. 6s. per doz. fine blooming plants; seeds, 1s. and 2s. per pkt

H.H.P. Primula Obconica, syn. Poculiformis—If sown in spring, Primula Obconica blooms in the latter half of summer, but it is from December to June that in a conservatory or cold frame it attains its height of attractiveness and beauty, and all the while furnishes a very plentiful and nseful material for cutting. The colour of the flowers, which measure about two-thirds of an inch across, slightly varies between white and pale all the gardening papers of repute. \$\frac{4}{5}\$ ft. 1s. and 2s. per pkt.

H.P. Primula Elatior Duplex (Hose-in-Hose); Polyanthus-Curious

and pretty. 1s. 6d. and 2s. 6d. per pkt.

H.F. Pyrethrum Parthenifolium Aureum (Compositæ), Golden Feather—This is the best yellow foliage bedding plant ever sent out. For autumn, winter, and spring decorations, they look grand if sown about the middle of August. 1 ft. 3d. per pkt.

u.r. Pyrethrum, Double—From best named kinds. $1\frac{1}{2}$ ft. 1s. per pkt.

H.P. Pyrethrum Aureum Laciniatum — Sport from Golden Feather; beautifully laciniated foliage, almost like a fern. \(^3_4\) ft. \(^3d\), per pkt.

u.r. Pyrethrum Aureum Selaginoides—An entirely new and distinct form of Pyrethrum, of an exceedingly dwarf and compact habit, the flat foliage resembling fronds of Selaginella Martinsi overlaying each other, which gives the plant a wonderfully grand and level appearance. It. Is. per pkt.

H.P. Pyrethrum, Golden Gem, or "Paris Pearl"—Invaluable bedding plant, producing large, elegant, double-white flowers, which are continued without intermission from May to November. 3 ft. 3d. per pkt.

m.p. Pyrethrum, Single—From best named kinds, beautiful colours; most useful for cutting purposes. 1½ ft. 3d. per pkt.

RANUNCULUS ASIATIOUS SUPERBISSIMUS.

n.r. Ranunculus Asiaticus Superbissimus (Ranunculaceæ)—Splendid large-flowered donble hybrids, flowering the second year from seed; most valuable acquisition. 4 ft. 6d. per pkt.

H.H.A. Rhodanthe (Helipterum) Maculata (Compositæ)—A very elegant variety, silvery pink, with yellow centre, beantiful alike either in bud or fully expanded. 1 ft. 3d. per pkt.

RHODANTHE MACULATA.

H.H.A. Rhodanthe Maculata Alba—1 ft. 3d. per pkt. Reseda Odorata—See Mignonette.

H.H.A. Rhodanthe Manglesii (Everlasting Flowers)—Elegant half-hardy annual, with dwarf erect branching habit, and bright rose coloured flowers. 1 ft. 3d. per pkt.

H.H.A. Rhodanthe Maculata Atrosanguinea — Very fine; crimson. 1 ft. 6d. per pkt.

H.H.A. Ricinus Borboniensis Arboreus (Ruphorbiaceæ), Castor Oil—Extra fine, growing 10 ft. high. 3d. per pkt.

H.H.A. Ricinus Gibsoni—Dark purple stem and leaves, very fine and ornamental; the best of all the ornamental-leaved Castor Oil plants for sub-tropical appearance. 5 ft. 3d. per pkt.

H.H.A. Ricinus Roseus Magnificus—A distinct and beantiful variety of dwarf and bushy habit, with large palmate leaves; seed vessels beautiful rose-pink, borne in large clusters. 5 ft. 3d. per pkt.

H.H.A. Ricinus Gibsoni Mirabilis—A haudsome variety; dwarf. 4 ft. 3d. per pkt.

ил. Ricinus Guyanensis—Dwarf. 4 ft. 3d. per pkt.

RIVINA HUMILIS.

G.P. Rivina Humilis (Phytolaccacew), Bloodberry or Rouge Plant— The prettiest redberry-bearing plant that we have, and for table decoration all through the autumn a gem; no warm greenhouse should be without it. 2 ft. 1s. per pkt.

Rocket-See Hesperis.

Rose Campion-See Agrostemma.

BUDBECKIA AMPLEXICAULIS.

H.P. Rudbeckia Amplexicaulis (Composita)—Yellow flowers. A bunch of these look very handsome arranged with their own foliage, and last a long time in water. 3 ft. 3d. per pkt.

H.P. Rudbeckia Drummondii-Orange. 3d. per pkt.

H.H.A. Salpiglossis Dwarf (Solanacew), Mixed—Large handsomely marked flowers, varying in tint from creamy white to black, blue and purple; has a splendid effect. Sow in March. 3d. per pkt.

n.p. Saivla Argentea (Labiatee)—Very silvery foliage, large size; a most effective and beautiful plant. 2 ft. 3d. per pkt.

n.p. Salvia Farinacea—A first-class hranching shrubby plant, 2 ft high, for summer bedding, of a hahit similar to the Salvia splendens and flowering at the same time. If sown early in the spring, the ends of the branches begin to show the flower-spikes in July; these are light blue, and retain for months this beantiful shade; the readiness with which it flowers in the open ground, combined with its easy cultivation, will make it a universal favourite in our flower garden. 6d. per pkt.

n.n.a. Salvla Hispanlea—A very fine annual, grows 3 feet, and its glittering aznre charming blossoms form a fine contrast to the glossy green foliage. 3d. per pkt.

н.н.р. Saivia Patens—Splendid blue. 2½ ft. 1s. per pkt.

H.A. Sanvitalia Procumbens (Composite)—Very effective, dwarf, close-growing plants, admirably suited from their continuous and free-hlooming habits for filling beds, planting edgings, rockwork, &c. \(\frac{1}{2}\) ft. 3d. per pkt.

n.A. Sanvitaiia Procumbens fl. pi.—Very double golden yellow flowers. ½ ft. 3d. per pkt.

u.a. Saponaria Calabrica (Caryophylleæ) Fuller's Herh, Soapwort—One of the prettiest and most useful annuals for bedding purposes; flowers dark rose, produced in great profusion for many months. \(\frac{3}{4}\) ft. \(\frac{3d}{4}\) per pkt.

HA. Saponaria Calabrica Alba—A white-flowered variety of the preceding; in all other respects similar; very desirable for contrast. Sow in the open in August or early in Spring. 3d. per pkt.

u.r. Saponaria Ocymoldes—An elegant trailer, well adapted for rockwork. &c. ½ ft. 3d. per pkt.

SCABIOSA (Or MOURNING BRIDE).

u.B. Scabiosa (Dipsaceae) Dwarf, Double, Pincushion Flower (Mixed)—Finc for beds or mixed borders; rich and heautifully coloured flowers; excellent for cutting. 1½ ft. 3d. per pkt.

n.B. Scablous, Golden Yellow, Double—The plants of this pretty and useful novelty are semi-dwarf and bushy, and bear in great profusion compact double flowers of a fine golden yellow colour, which are admirably adapted for entting. A yellow Scabious having long been looked for there is no doubt this introduction will secure a large share of popular favour. 1s. 6d. per pkt.

Other Varietics of Scabiosa or Scabious can be supplied. 3d. to 1s. per pkt.

H.H.A. Schlzanthus Grahami Retusus Nanus—Only 1 foothigh; flowers bright scarlet, with orange, red, and dark brown, shaded 3d. per pkt.

H.H.A. Schizanthus Grahami (Solonaceæ), Butterfly or Fringe Flower—Elegant garden or greenhouse variety; lilac and orange. 2 ft. 3d. per pkt.

n.n.a. Schizanthus Papillonaceous Pyramidalls—Charming variety of colours. $1\frac{1}{2}$ ft. 6d. per pkt.

H.H.A. Schlzanthus Pinnatus Pyramidalis "Tom Thumb"—Perfectly constant variety, symmetrical growth, only 12 inches high, abundance of flowers; purple, with black centre; an acquisition. 3d. per pkt.

H.P. Sedum Coruleum (Crassulacea)—A pretty blue flowering stene-erop, nseful for the reckwork, &c. 6d. per pkt.

Senecio Eiegans Pomponicus, Cream Coloured—A charming and very delicate coloured variety, equally as pretty, and comes as true from seed as the other kinds of Pompon Senecios. 1s. per pkt.

n.a. Seneclo or Jacobæa (Composite), Double—Free-flowering plants, preducing their gay-coloured flowers in great profusion. § ft. Mixed, 3d. per pkt.

и.н.р. Sempervivum Tabulæforme (The Table Plant) — A splendid sneculent, ½ ft. 1s. 6d. per pkt.

Sensitive Piant-See Mimosa Pudica.

H.A. Silene Pendula - Mixed. 3d. per pkt.

II.A. Silene Pendula Alba-White. 1 ft. 3d. per pkt.

H.A. Silene Pendula Compacta Alba—Dwarf and compact, very recommendable for edgings; white. 3d. per pkt.

H.A. Silene Pendula Compacta Ruberrima fl. pl. – Splendid variety; flowers red. $\frac{1}{2}$ ft. 3d. per pkt.

H.A. Sllene Pendula Nana Compacta—A very heautiful spring bedding plant, dwarf and compact; flowers bright pink, borne profusely in a dense compact mass; valuable for edging on ribbon borders. 4 in. 3d. per pkt.

SILENE PENDULA NANA COMPACTA.

SOLANUM, HYBRID IMPROVED.

H.A. Silene Pendula (Caryophylleæ)-Pink. 1 ft. 3d. per pkt.

H.A. Silene Pendula fl. pl.—A spleudid donble variety; flowers rose-carmine. 1 ft. 3d. per pkt.

G.SH. Solanum Capsicastrum (Solanacea), Hybrid Improved —These are heantiful for winter decoration, and are of easy culture. 1 to $1\frac{1}{2}$ ft. 6d. per pkt.

Sow in January, keep them growing, and by the antumn they will he covered with round, bright, orange-coloured herrics, which are very pretty all the winter.

Ornamental-foliaged Solanums for sub-tropical arrangements also supplied, 3d. to 6d. per pkt.

H.r. Stachys Lanata (Labiate), Hedge Nettle—A very hardy plant, with large woolly leaves, close compact growth; fine for large broad margins. 1 ft. 3d. per pkt.

SILENE PENDULA, DOUBLE.

CANNELLS' STOCKS.

BROMPTON STOCK.

PERPETUAL TEN-WEEK STOCK, "PRINCESS ALICE."

H.H.A. German Emperor Stock - Extra fine, mixed. 1 ft. 1s. per pkt.

H.B. Stocks, Brompton—A strong growing biennial variety, very nseful for winter or spring gardening. 2½ ft. Scarlet, 1s. per pkt.; Purple, 6d. per pkt.; White, 6d. per pkt.; Finest Mixed, 6d and 1s. per pkt. Bromptou should be sown in July, and planted out in a good soil in a sheltered situation. They generally stand the winter without protection, and make a grand display in June and July.

H.B. Stocks, East Lothian, Intermediate (Edinburgh Prize Strain)—Magnificent in heds or ribbon horders, also herbaceons borders; grows rapidly and flowers abundantly from August to January, forming quite a link hetweeu summer and spring flowers. All 14 ft. high.

White-Pure white; grand flowers. 1s. per pkt.

White (Wallflower leaved)—Admirahly adapted for growing in pots, as it seldom grows more than one foot in height; flower fine, perfume delicious. 1s. per pkt.

Magenta Crimson-Vivid colour; very choice. 1s. per pkt.

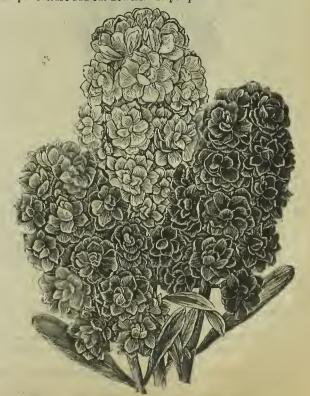

Purple-Grand. 1s. per pkt.

Mixed-1s. per pkt.

H.B. Stocks, Intermediate—This seed is saved from the best Covent Garden Stock. Scarlet, 6d. per pkt.; White, 1s. per pkt.; Purple, 6d. per pkt.; Mixed, 1s. per pkt.

The Intermediate or Spring-flowering Stocks are extensively cultivated for Covent Garden Market. In the early summer mouths, during the 'London Season," it constitutes one of the principal features in furnishing jardinets, &c., and is also of great value in filling the early summer flower beds. The East Lothian Stock is more branching than the True Intermediate, and therefore not so well adapted for pot culture, but is more valuable for the flower garden. For autumn flowering sow early in spring; for spring flowcriug sow early in July, and winter in cold frame.

H.H.A. Stock, Perpetual-flowering-Dwarf, mixed. 1s. per pkt. H.H.A. Perpetual Ten-week Stock, Princess Alice-Snow white; fine for pot culture and cut flowers. 1s per pkt.

LARGE FLOWBRING DOUBLE GERMAN TEN-WEEK STOCK. н.н.а. Stocks (Cruciferw), Large-flowered German Ten-week
—Finest mixed colours; extra fine. 1 ft. 1s. per pkt.

For collection of Stocks, see page 52.

PERPETUAL STOCKS.

The foregoing varieties of Stock have proved to be the most distinct and decorative, and suitable to the different styles of gardening for which the Stock is so admirably adapted. All are desirable pot-plants, and are greatly prized as cut flowers, both for their diverse colours and fragrance. For a continuous succession of bloom, seed should be sown at intervals from the heginning of March to the end of May, the first sowing under glass, the latter sowings may be made where the plants are intended to bloom.

WHITE MAMMOTH TEN-WEEK STOCK.

H.H.A. Stock, White Mammoth Ten-Week—Of Inxurious robust growth; attains in the open ground a height of 3 ft., and produces only a single strong spike, 1 ft. in length, closely covered with very large well-formed flowers of the purest white; valuable for large groups. 1s. per pkt.

H.P. Stellaria Graminea Aurea (Caryophyllew) — Neater than Golden Feather and, like that, far better from seeds than plants. 3 in. 6d, per pkt.

STENACTIS SPECIOSA.

H.P. Stenaetis Speciosa, syn Erigeron Speciosus (Compositæ).
—Purple flowers, plants 2 teet high. If the seed is sown in a slight hot-bed in March, it will produce flowering plants the same year. 3d. per pkt.

Stipa-See Ornamental Grasses.

Sunflowers-See Helianthus.

Sweet Alyssum-See Alyssum Maritimum.

Sweet Sultan-See Centaurea Moschata.

Sweet William-See Dianthus Barbatus.

TAGETES SIGNATA PUMILA.

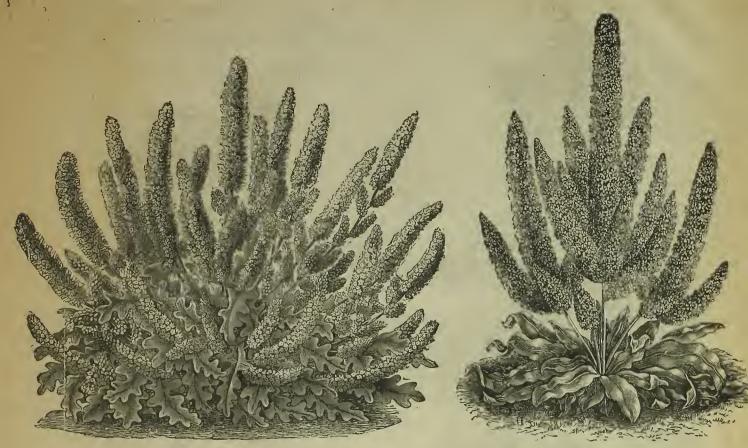

и.п. г. Statice Bonduelli (Plumbagineæ)—Light golden-coloured everlasting flowers. 1 ft. 6d. per pkt.

G.P. Statice Halfordii (Everlasting)—A superb blue variety; useful for the decoration of the greenhouse. 2s. per pkt.

H.A. Statice Suworowi—By far the fluest of all annual Statices, and indeed one of the showiest annuals we possess; similar in habit to S. Spicata, but greatly superior to it. Its branching flower spikes, of a very bright rose with a crimson shade, appear successively from ten to fifteen on each plant, and measure each fully 15 to 18 inches in length, and from \(\frac{1}{2}\) to 1 inch in breadth; the foliage lying flat on the ground is comparatively small, and completely hidden by the numcrous flower spikes, each leaf being about 5 inches long and 1\(\frac{1}{2}\) to 2 inches broad, undulated and glaucous. One plant will last in flower more than two mouths, and if sown in succession from February to April, it may be had constantly flowering throughout the summer and antumn. A whole bed of this lovely plant in full bloom is a truly magnificent sight, being one mass of flowers. 6d. per pkt.

II A. Statice Spicata (Everlasting) -Forms long spikes of rosydink flowers; of easy growth. 3d. per pkt.

Other Varieties of Statice can be supplied.

STATICE SPICATA

o.p. Streptocarpus (Gesneracea), New Hybrids—These new hybrids are remarkable for their abundance of bloom, and the continuous succession in which the flowers are produced for about four months in the

summer and carly autumn, and also for the long time the individual flowers last in perfection. The plant is a greenhouse perennial, of dwarf, neat habit, growing about 9 inches high, with rather long, narrow, arched and recurved stemless leaves; whilst the flowers, which are very graceful in

STATICE SUWOROWI.

form, are trumpet-shaped, and measure about 13/4 inches in length. The variation of colours in these new hybrids is very striking, searcely two plants being exactly the same, and the colours range from pure white, through pale lavender, lavender-blue, lilac-blue, light manve, purple, violet, bright rose, and red to rich rosy purple, with all the intermediate vints, and in all the flowers the throat and three lower segments are more or less marked or splashed with long blotches or spots of various shades of purple, generally shaded and relieved with white, which greatly enhances the effect, and affords a pleasing contrast of colour. If seed is sown the end of January and February, the plants come into bloom the following June and July, and continue flowering freely until the end of September and October. 2s. 6d. and 1s. 6d per pkt. form, are trumpet-shaped, and measure about 13 inches in length. The

H.A. Sweet Pea, Adonis-Bright carmine. 3d. per pkt.

H.A. Sweet Pea, Butterfly-Wonderfully attractive. 3d. per pkt.

Sweet Pea, Captain of the Blues-The standards bright purpleblue, with pale blue wings; a very striking and fine variety. 1s. per pkt.

H.A. Sweet Peas, Eckford's-Finest varieties, mixed; a spleudid strain. 6 ft. 6d. and 1s. per pkt.

Sweet Pea, Empress of India—Clear rosy-pink standards and white wings; large and very pleasing. 1s. per pkt.

n.a. Sweet Pea, Fairy Queen-Flesh coloured. 6d. per pkt.

H.A. Sweet Pea, Invincible Scarlet. 3d. per pkt.

Sweet Pea, Monarch-Brouzy-crimson standards, with rich deep blue wings; a very large and striking variety. 1s. per pkt.

H.A. Sweet Pea, Painted Lady. 3d. per pkt.

Sweet Pea, Primrose-A near approach to a Yellow Sweet Pca, quite novel and distinct in colour; the standards and wings pale primrose vellow. Awarded First-Class Certificate by the Floral Committee of the Royal Horticultural Society. 1s. per pkt.

H.A. Sweet Pea, Princess Beatrice-A beautiful plnk. 6d.

Sweet Pea, Princess Victoria—Standards dark ccrise, the wings mauve-pink, and slight lines of rose; very pretty and attractive. 1s. per pkt. n.a. Sweet Pea, Purple. 3d. per pkt.

COLLECTIONS OF SWEET PEAS.

 12 Varieties, to name, including Noveltics of 1892 and 1893.
 10s. 6d.

 12 Varieties, to name.
 3s. 6d.

Blushing Beauty-Soft pink, suffused with lilae; a snperb flower; a distinct and lovely variety. In scaled pkts., 2s.

Duke of Clarence—Rosy claret self-eoloured flower, large; very fine. In sealed pkts., 1s. 6d.

Emily Eckford—A superb flower, of a well-marked corruleau tint, the standard suffused with reddish mauve, closely approaches a true blue; a most desirable variety, large, and of good substance. In sealed pkts, 2s.

Firefly—A self-coloured, intense, glowing crimson, good size and substance; a very free bloomer. In scaled pkts., $1s_{\star}$

Gaiety—The standards white striped, and flaked with bright rosylilae, the wings delicate blush. In scaled pkts., 1s.

Rising Sun—Another very striking and pretty new variety, the standard embracing a carious mixture of orange and rose, shaded and splashed or spotted earmine, wings pale rose, shading off to blush white. Price, in scaled packets, 1s.

Venus—Salmon buff, the standards delicately shaded rosy pink, very distinct; a most charming flower. Certificate of Merit, R.H.S., 1891. In scaled pkts., 2s.

n.a. Cannells' Selected Sweet Peas (Lathyrus Odoratus)—Finest, mixed. 6 ft. 3d. per pkt.

Sweet Pea, Senator—A large bold flower, finely expanded standards, shaded and striped chocolate on creamy ground; a lovely variety. 1s, per pkt.

H.A. Sweet Pea, White. 3d. per pkt.

H.H.A. Tagetes, Signata Pumila (Composite)—A miniature variety of Mangold, with small pinuate leaves, golden yellow flowers, striped with crimson during antumn and summer months; one of the most useful annuals for bedding and decorative purposes. 1 ft. 3d. per pkt.

Tassel Flower-See Cacalia Coccinca.

- G.A. Thunbergia Alata (Acanthacew)—Beautiful climber for pot culture in conservatories, and for low walls on warm aspects in the garden, growing 4 to 6 feet high, and flowering profusely throughout the summer months; flowers pale buff with nearly black throat, leaves shaped somewhat like a spade. 3d. per pkt.
- g.a. Torenia Bailloni, syn. Flava (Scrophularinew) A gem; yellow, with a parplish-brown tube; is very effective as a basket plant in a compost of two parts peat and one part loam and leafy mould. 9 ius. 1s. per pkt.

Torenia Fournieri Cœlestina — A very pretty and delicate colour; the upper part of the flower is nearly pure white, whilst the side florets are of a most pleasing tiut of soft mauve, the underlip showing a little more of the lilac shade. 1s. 6d. per pkt.

c.A. Torenia Fournieri Superbens — Large sky-blue flowers with indigo blue spots and bright yellow in centre; if sown from February to April will bloom nnder glass from June to September, and will also thrive well if planted out in the summer months in a warm climate. 1 ft. 1s. per pkt.

CANNELLS' IMPROVED AND

n.H.A. Tropæolum Lobbianum (True)—Elegant, and remarkable for their richly diversified colours and profusion of bloom, being equally adapted for in or ont-door decoration. and very graceful growing over trellises, pillars, walls, &c. Best named kinds, to colour, can be supplied. (See collections, page 53.) Mixed, 3d. per pkt.

u.A. Tropæolum Majus—Strong-growing; tall. Mixed, 3d. per pkt. Best named kinds, to colour, 6d. per pkt.

u.u.a. Tropæolum, syn. Peregrinum (Aduncum) Canariense (Canary Creeper). 8 ft. 3d. per pkt.

H.A. Tropæolum, Tom Thumb, Crystal Palace Gem—Sulphur, spotted with crimson. 3d. per pkt.

u.a. Tropæolum, Tom Thumb, Empress of India—One of the best of this section; very showy; a gem. 6d. per pkt.

SWEET PEA.

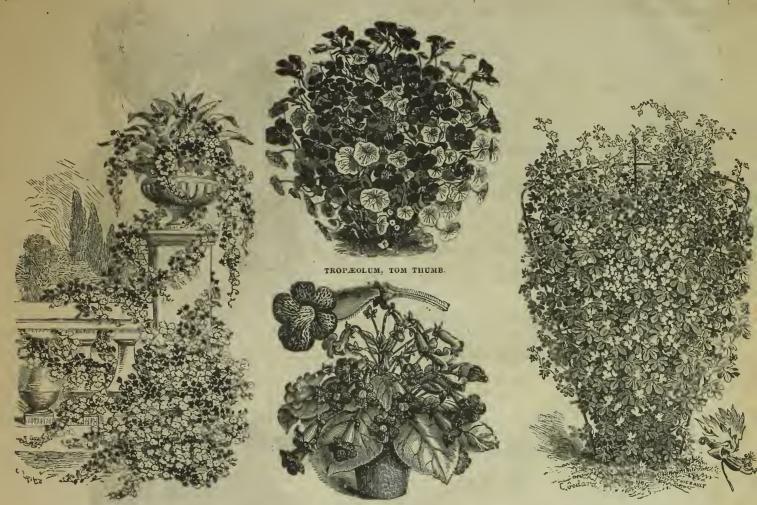

TORENIA.

n.n.a. Trichosanthes Colubrina, syn. Anguina (Cucurbitacew), Suake Gourd—Beautiful climbing plant, with long, elegant, serpent-like fruit from 5 to 6 feet in length, which when ripe is of a brilliant earmine colour. 3d, per pkt.

RE-SELECTED TROPÆOLUMS.

- 11.A. Tropæolum, Tom Thumb, King Theodore—A distinct and very effective variety; foliage bluish green; habit compact; flowers very dark velvety crimson. borne in great profusion many mouths in succession. 6d. per pkt.
- u.a. Tropæolum, Tom Thumb (Mixed)—Containing many showy varieties. Best named kinds, to colour, 3d. per pkt.
- н. A. Tropæolum, Tom Thumb, Pearl-Creamy white; very pretty. 3d. per pkt.
 - н. P. Tropæolum, Speciosum—Tuberous rooted. 1s. per pkt.
- 11.A. Tropæolum, Tom Thumb, Beauty—Scarlet and yellow. 3d. per pkt.

TROPÆOLUM LOBBIANUM.

TYDÆA HYBRIDA NANA.

TROPÆOLUM PEREGRINUM CANARIENSE.

- H.A. Tropæolum, Tom Thumb, Coccineum Folius Aureis—Yellow leaved Dwarf Nasturtium; flower scarlet, which forms a striking contrast with the pretty light foliage; very attractive as a hedding plant. &d. per pkt.
 - H.A. Tropæolum, Tom Thumb, Cærulea-Roseum-3d. per pkt.
 - H.A. Tropæolum, Tom Thumb, Ruby King-6d. per pkt.
- n.a. Tropæolum, Tom Thumb, Spotted-Scarlet and yellow 3d. per pkt.
- s.r. Tydæa Hybrida Nana The enlture of the natural order Gesneriaceæ has heen a speciality of our establishment for a number of years, and our seedlings of Gloxinias, &e., comprise the finest and most heautiful varieties existing in this genus. The Tydæas cultivated up to the present time have the disadvantage to grow to the height of 1½ to 2 feet and more hefore they form their flower stems, while the new class is of dwarf growth, attaining only a height of 6 to 9 inches when in full bloom, heing very free flowering and varying in the same magnificent colours and strains as the tall sorts. Its very dwarf habit renders it very valuable, heing equally as pretty as Gloxinias, and if sown early and potted forward these gay and effective varieties will also bloom the same season and at the same time.
- н.р. Valeriana Ruber (Valerianeae)—The well-known red garden Valerian. 2 ft. 3d. per pkt.

Venus Looking-Glass-See Campannla Speenlum.

n.r. Verbascum Olympicum—Flower spike from 6 to 8 ft. in height; flowers of a soft yellow shade, very sweet; large woolly leaves. For the back part of a mixed horder, or grouping with other plants of remarkable size or form of foliage, or for placing here and there in open spaces among shruhs, it is well suited. A hold group of it arranged on the grass by itself, in deep, light, well prepared soil, would be very effective. 1s. per pkt.

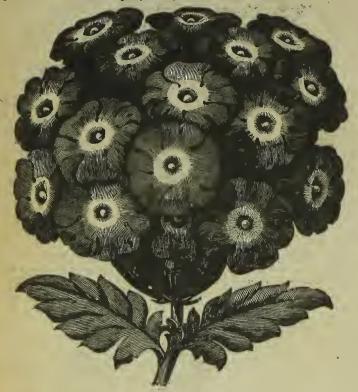

VALERIANA.

Verbascum Pannosum—Magnificent new hardy Mullein, a native of the Rhodope mountains in South Bulgaria. It produces a very large rosette of downy, silvery-grey foliage, in the centre of which rises the stately flower-spike, attaining a height of 4 to 5 feet by $1\frac{1}{2}$ inches in diameter, and being mostly unbranched. The individual flowers, which appear profusely every day during its flowering time, are rather large and of a hright yellow colour. The single leaves often measure more than 3 feet in length. 1s. per pkt.

u.p. Verbaseum Phœniceum Roseum-Very showy, flowering freely throughout the summer. 2 ft. 3d. per pkt.

H.H.P. Verbena (Verbenacese) Hybrida Candidissima—Large, pure white flowers. 1s. per pkt.

VERBENA.

н.н.р. Verbena Hybrida Dark Blue—1s. per pkt.

H.H.P. Verbena Hybrida Deflance—Beantiful rich scarlet flowers.

H.H.P. Verbenas (Choicest Mixed)—This seed is saved from our hest collection—in fact, from all the best at present in cultivation. Sow in heat early in spring. 6d. and 1s. per pkt.

H.F. Verbena Venosa—A good old bedding plant; the true variety. 1; ft. 3d. per pkt.

VERONICA SPICATA.

H.P. Veronica Spicata (Scrophularinew), Sp. edwell — Long, elegant spikes of rich blue. 6d. per pkt.

VINCA (PERIWINKLE).

H.H.P. Vinca Rosea (Apocyraccor)—These beantiful and easily cultivated plants when sown in spring flower in summer, and are important in the decoration of the conservatory and sitting-room; they sacceed out of doors in warm situations; flowers rose, white centre. 1 ft. 3d. per pkt.

H.H.P. Vinca Rosea Alba Pura-Pure white. 1 ft. 3d. per pkt.

H.P. Violas (Violariew)—For continuous lines, ribbons, and edging to large beds, or intermingle with other plants these arc charming; continuously in bloom if attended to.

Finest Mixed. 6d. and 1s. per pkt.

Violet (White Czar)-6d. per pkt.

H.A. Virginia Stock (Malcolmia) (Crucifera)—When sown in February or March, a very gay display is produced in the flower garden with this plant, while spring flowers are passing away and summer flowers are coming on. 6 in.

Crimson King. 3d. per pkt.

Pigmy-Dwarf, compact white. 3d. per pkt.

H.A. Mixed-3d. per pkt. . .

H.A. Viscaria Cardinalis (Caryophyllea)—Splendid cardinal colonred. 1 ft. 3d. per pkt.

H.A. Viscaria Coerulea—Blne; this fine variety produces a nice contrast with cardinalis. 1 ft. 3d. per pkt.

H.A. Viscaria Elegans Picta—Scarlet, margined white, elegant and beantiful. 1 ft. 3d. per pkt.

H.A. Viscaria (Mixed)—Lovely little flowers, borne on gracefal stems well above the foliage; is most valuable when gathered for specimen glasses, haskets, &c. 3d. per pkt.

H.H.A. Waitzia Grandiflora (Compositae) — Everlasting flower, valuable for winter bouquets; flowers bright yellow. Requires picking early on account of the centre soon becoming discoloured. 1½ ft. 1s. per pkt.

CANNELLS' WALLFLOWERS.

(Cheiranthus Cheiri.) CRUCIFERÆ.

Wallflowers are prized for their delicious fragrance. In the spring they are indispensable for beds, groups, and ribhons. The large massive conspicuous spikes of the double German varieties have a charming effect, while the more bushy compact growth and profuse blooming of the Single Wallflowers render them exceedingly attractive. A mass of Golden Tom Thumb, with its unalloyed rich golden orange blossoms, is a sight unrivalled, and so profusely does it bloom as to resemble a dense carpet of gold.

H.P. Bedfont Yellow-Fine colour rich golden yellow. 3d. per pkt.

113)

т

WALLFLOWER (DOUBLE).

H.P. CANNELLS' IMPROVED MAROON—One is delighted when the eye rests on a very dwarf blood-coloured Wallflower; the darkness and the perfume of this variety far exceeds all others, and a few plants is a feature in every garden. 1½ ft. 1s. per pkt.

HP. Covent Garden-Dark blood red. 1½ ft. 3d. per pkt.

M.P. Double German—Dwarf, compact habit; exceedingly fine massive spikes of beautiful flowers. Finest mixed. 1s. per pkt.

GOLDEN TOM THUMB WALLFLOWER.

H.P. Golden Tom Thumb—If there is one flower that ought to be more generally grown in every garden than it has been, it is the Golden Tom Thumb Wallflower, for it is a mass of flower all the winter and spring.

H.r. Harbinger — Autumn and winter flowering Wallflower, extremely early flowering; great acquisition all the spring; flowers brown. 1½ ft. 3d. per pkt.

n.p. Sisley's Broad Petalled Winter Flowering—Mons. Jean Sisley sent us seed of this, stating that it was well worth introducing into England, as it was far superior to our varieties; and true enough, a bed proved to be the surprise and admiration of all who saw it. Should be introduced into every garden. 1s. per pkt.

H.P. Wallflower-Grabam's yellow perfection. 3d. per pkt.

H.P. Wallflower-Single, mixed. 3d. per pkt.

Wallflower-Single, dwarf Harbinger; brown.

Wallflower-Single, dwarf; brilliant red.

Two new pretty colours of the Dwarf Single Wallflower, which will be much appreciated by all lovers of this popular flower. 1s. per pkt.

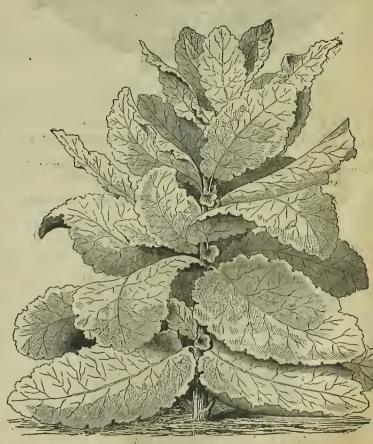

m.p. Wallflower Primrose Dame—Quite distinct from all others; colour a pale lemon; forms a striking contrast to the dark varieties. 3d. per pkt.

W Poppy-See Meconopsis.

WHITLAVIA GLOXINI EOIDES.

H.A. Whitlavia Gloxinizeoides Phacelia (Hydrophyllacew) — The fine Gloxinia-like blooms of these recommend them for flower beds and border decoration during both spring and summer. 1 ft. 3d. per pkt.

WIGANDIA CARACASANA.

. и.п.р. Wigandia Caracasana, syn. Macrophylla (Hydrophyllacea)
—Useful as single specimens on the lawn and sub-tropical effect. 6 ft.

Winter Cherry-See Physalis.

H.A. Xeranthemum Annuum Superbissimum (Composite) Immortelle—Beautiful violet-purple everlasting flowers, makes a grand effect in borders where the flowers succeed each other from June till late in the latitum. The ent flowers are peculiarly interesting and desirable as dried specimens; handsome bonquets may be formed of them for indoor decoration during the winter, if the blooms be gathered when upon the point of opening.

11 ft. To be treated the same as the Aster. 3d. per pkt.

II.A. Xeranthemum Annuum Superbissimum fl. pl. Alba-Fine glohular heads of pure white flowers. $1\frac{1}{2}$ ft. 3d. per pkt.

H.H.A. Zinnia Elegans, Single-Mixed. 6d. per pkt.

H.H.A. Zinnia Elegans, Double-Mixed. 6d. and 1s. per pkt.

XERANTHEMUM ANNUUM SUPERBISSIMUM. (EVERLASTING.)

In some seasons the first or early flowers of Zinnias do not come perfectly double, it is therefore best to allow a fair time to elapse before weeding them out.

CANNELLS' FINEST EXHIBITION DOUBLE ZINNIA.

H.H.A. Cannells' · Zinnias (Composita) - These are amongst the most dazzling and durable of annuals, and the way in which they look best is in a bed or masses of mixed colours. Why many fail with them is in sowing them too soon, as they either get drawn or starved before it is safe to plant them ont, or they get pinched with cold, and in either ease they get such a check that they seldom recover. Any time in April is quite early enough to sow the seed, which ought to be sown in gentle heat to get it to germinate. As soon as the plants are up stand near the glass to keep them strong and stocky, and after being pricked out into boxes and well rooted, harden off gradually for a week or so ready to plant ont in rows a foot apart, and the same distance from plant to plant. To grow well and enable them to stand dry weather Zinnias require a good soil which has been deeply dug with plenty of rotten manure worked in.

The Pumila varieties, which are dwarf and compact, are admirably adapted for pot plants. The single Zinuias are also very handsome, while it would be impossible to speak too highly of the double and single varieties of Haageana for heds, rockwork, and masses in the borders. The seeds are carefully selected from the finest and most perfect flowers only

H.H.A. Zinnia Haageana fl. pl.—Hahit similar to the single form known under the name of Z. Haageana, but its brilliant orange flowers are full, double, and regularly built; ought to be more grown. To he sown and the same as recommended for the Aster. 6d. per pkt.

H.H.A. Zinnia Elegans Alba, fl. pl. -A beautiful

variety, producing magnificent double white flowers all through the season. 11 ft. 6d. per pkt.

H.H.A. Zinnia Elegans Pumila fl. pl.—Great

acquisition for ribbon borders, &c. Its flowers are perfectly double, and include many brilliant colonrs. Height,

H.H.A. Zinnia Grandiflora Robusta Plenissima

—Producing very large fine flowers of the richest shades of colour; vigorous, bushy growth. 21 to 3 ft. 1s. per pkt.

n.n.A. Zinnia Elegans Nana fl. pl. Striata— As in the case of the tall double-striped varieties, the semi-dwarf class now offered comes about 50 per cent. true from seed, and includes in its range a great variety of very effective colours. 1s. per pkt. н.н.л. Zea Japonica Variegata (Striped Japanese

Maize)—A free growing and very ornamental variety, attaining the height of 4 ft.; leaves broad, alternately striped with green and white, and one of the best ornamental foliage plants that we possess; invaluable for the centre of beds or borders. Sow in March. 3d. per pkt.

For Collections of Zinnias, see page 53.

(115)

FLORISTS' FLOWER SEEDS.

Should any amateur or gardener have seed of the above from a choice first-class strain, and would kindly send a fair sample of bloom for inspection, if satisfactory, H. CANNELL & SONS, DEALERS IN ALL KINDS OF FLORISTS' FLOWER SEEDS, would be glad to exchange or purchase the same.

ZINNIA HAAGEANA FL. PL.

CANNELLS' LIST OF PENNY PACKETS OF FLOWER SEEDS.

We are growers of Flower Seeds in large quantities, and of the very best quality in Europe, and now offer the following in Penny Packets for cottagers. Our facilities enable us to be more generous, and to send better seeds, than any other house in England.

12 packets post free; if less than 12 packets are ordered, extra stamps must be sent to cover the postage.

ORNAMENTAL GRASSES.

HESE beautiful, fine, feather-like Grasses are exceedingly ornamental, and are much grown—in fact, thousands are sold in Covent Garden, and they contrast most beautifully amongst high-coloured flowers either in pots or bouquets, winter and summer. Their culture is very simple: treat them similar to Asters, and they will be sure to give a charm to every garden. The following will be found the most useful:—

BRIZA GRACILIS.

BRIZA MAXIMA, OF QUAKING GRASS.

COIX LACHRYMA, Or JON'S TEARS.

ERAGROSTIS ELEGANS, OF LOVE GRASS

TIGRIDIA (Mexican Tiger or Iris Lily).

TIGRIDIA PAVONIA GRANDIFLORA.

Natives of Mexico, producing flowers of exquisite beauty and singularly curious shape, the colour of each variety is gorgeous and finely contrasted; they bloom from July to October. Before the frost take up the bulbs, and keep in a dry place until the time of planting in March or April. The following are the most distinct and beautiful varieties:—

Pavonia Grandiflora Alba—Large ivory-white flowers, spotted with marcon and rosy lake in the centre, most beautiful when the bloom nnfolds itself in the morning; recommended as a distinct and useful variety. 2s. 6d. per doz.

Pavonia Grandiflora—Is most beautiful when the bloom unfolds itself in the morning; from June until the frost sets in no flower so gorgeous or pretty was ever seen, but as the sun sets the flower ceases to exist, and the quantity produced is enormous. Beyond planting in the ordinary way of a Tulip, nothing more is required. 2s. per doz.

Conchiflora - Orange and golden yellow, spotted with dark crimson. 1s. 6d. per doz.

Pavonia—Rich searlet, tinged and spotted with yellow. 1s. 6d. per doz Speciosa—Brick-red. 1s. 6d. per doz.

Wheelerii-Blood-red. 2s. per doz.

Mixed-2s. per doz.

TUBEROSES.

All who have our Tubers at once exclaim, "I have had nothing like them before." The fact is we are large growers, and the secret is they are grown especially for us in a spot most cougenial, which makes them unequalled in England.

CULTURAL DIRECTIONS.—Pot into 60's, place in 65° temperature bottom heat, keep moist until roots have made a growth, then increase the temperature to 80°. When full of roots re-pot into 6-ineh pots, and place near the glass; after bloom spike appears, place them in a cooler honse, and train up under the glass. They must be well syringed, and amply supplied with liquid manner.

For other choice bulbons plants—viz., Begonias, Achimenes, Cyclamen, Glorinias, and Tropocolums—see our Floral Guide and Bulb Catalogues, both sent post free on application.

AMERICAN TUBEROSE.

American Tuberose (Double)—For choicest button-hole bouquets, &e., no other flowers are of more value at all seasons than the Tuberose, and should be used in succession in every forcing-house during the winter. 2s. per doz; 12s. per 100. For delivery about Christmas.

African Tuberose (Double)—Direct from the Cape; can highly recommend them. 2s. 6d. per doz.; 17s. 6d. per 100.

LILIES.

LILIUM HARRISH.

The best and most useful varieties in cultivation.

Auratum (The Golden-rayed Lily of Japan)—One of the grandest of Lilies, 1s., 1s. 6d., 2s., and 2s. 6d. cach; 9s., 12s., 18s., and 24s. per dozen. Bulbs in pots can be supplied if required.

Brownii—Interior pure white, exterior of a brownish shade; very fine. 3s. 6d. to 5s. 6d. each.

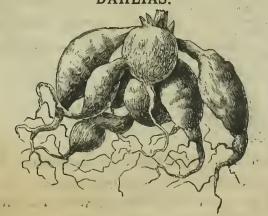

Bulbiferum Umbellatum—Crimson-scarlet, shading to yellow, thickly spotted. 2½ ft. 9d. each; 7s. 6d. per dozen.

Candidum (The Old White Garden Lity)—Still one of the best for foreing or borders, snow white. 4 ft. 3d. cach; 2s. 6d. per dozen.

Longiflorum Harrisii-Truc (The Bermuda, or Easter Lity)—Flowers pure white, long and handsome; very free. 1s. to 2s. each; 10s. 6d. to 20s. per dozen.

per dozen.

DAHLIAS.

DAHLIA TUBERS. The finest and best kept collection in the world.

The tubers can be, sent by post to all parts of the globe. Capital presents to make to friends abroad.

30,000 Pot Roots for Propagation now ready for immediate delivery.

Our selection, 5s., 12s., and 18s. per dozen, from General Collection, as per " Floral Guide."

For varieties and descriptions, see Dahlia List.

MONTBRETIAS.

MONTBRETIAS.

CHINESE SACRED LILY.

(Narcissus Tazetta.)

They may be grown either in soil in pots of water in a vase, but the latter method is to be preferred, as it lends itself more readily to artistic arrangement, and the bulbs bloom much earlier. They should be treated in the same way as Hyacinths, and can be planted at any time between October and March.

My. The flowers are exquisitely perfumed, and of a clear white colour, with bright yellow cup.

SACRED

Each bulb sends up six or more strong spikes, and in a moderately cool room will bloom in about eight or ten weeks from the time of planting.

Each, 1s.; per doz. 9s.

We have imported a limited quantity of specially decorated Japanese bowls, as used in Japan for the cultivation of the Chinese Sacred Lily, which we can supply at the following prices so long as unsold.

Mr. T. Newton, The Gardens, Campsall Hall, Doncaster, May 4th, 1893. Primulas from your seed were grand. I had blooms $2\frac{3}{4}$ inches across, and plants 3 feet from tip to tip.

Mr. W. Cairns, The Gardens, Stedalt, Balbriggan, May 4th, 1893.

I had 100 plants in 6-inch pots from a packet of your Prinnla seed. Never saw better.

T. Hollands, Esq., Old Whittington, Chesterfield, September 7th, 1893. Your seeds are the best I ever had. I took First Prize for Verbenas and Pelargoniums against named varieties.

GARDENERS.

Our Mr. H. Cannell, Senr., gives personal daily attention to all applications for Gardeners; his wide connection, and being a large employer, makes him either personally or intimately acquainted with most o the best practical and deserving men in the country, and he would feel a real pleasure in assisting and fitting in the right man to fill the situation for which any lady or gentleman may require him.

PRICES OF ROSES.

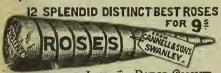

WHEN THE SELECTION IS LEFT TO US:-Standards and Half-Standards, best sorts, and
well varied, 18s. to 24s. per dozen.

Dwarfs on the Brier, extra strong good varieties, 9s. per dozen; £3 10s. per 100.

Dwarf Teas, varieties, from open ground, 15s. per dozen. Extra fine plants in pots, 18s., 24s., and 30s. per dozen.

Hybrid Perpetuals in pots, good strong plants, 18s. per dozen.

Amateurs selecting their own are respectfully requested to add to their orders a few supplementary sorts, lest by previous orders the stock of any particular variety should be exhausted, this being especially necessary late in the season.

GOLD MCDAL·LONDON·PARIS·GHENT-POST FREE, PARCEL POST.

MARECHAL NIEL,

8 ft. to 12 ft. high. 3s. 6d., 5s., and 8s. each.

ESTABLISHED PLANTS in 6-inch pots, of all the finest Tea-scented varieties, grown especially for Conservatories. 30s. to 42s. per dozen.

Extra Strong Plants, in pots for foreing, always in bud—NIPHETOS, CATHERINE MERMET, SOUVENIR D'UN AMI, PERLE DES JARDINS, THE BRIDE, ISABELLA SPRUNT, MADAME FALCOT. 2s. 6d. and upwards.

Extra Strong Plants of NIPHETOS, fuli of buds, 3 and 4 feet high, 7s. 6d. and 10s. 6d. each. Special Prices for Large Quantities to the Trade.

Climbing Roses, specially grown in pots for training on walls and rafters, for Conservatory and Out-door Planting. 3s. 6d. to 5s. each.

BY POSTAL TRANSIT.

RAPE VINES we grow very extensively; four of our 100-feet houses are filled with them early in the spring, and afterwards (the houses) used for drying seeds during August and September. Each year we have some unsold from the preceding year's sale; these are shifted from the 9 and 10-in, pots into boxes filled with well-prepared soil, and make strong growth from 12 to 18 feet long, earrying bunches of Grapes. These are of great importance when a hot se

is required to be filled at once. At all seasons these Vines, if planted intact and laid sideways, together with two feet of stem, six inches below the surface, will at once put forth young fresh roots. By having these a season's planting will be saved, and fruit at once. 10s. to 12s. each.

We have also a large quantity planted out, four years old, with very large strong canes for immediate eropping. Would fill a house the first season if planted in a similar way in good soil.

Alicante-Black. bunches large; a fine late variety.

Alnwick Seedling—Black, large oval berries; rich flavour.

Barbarossa — Black. produces enormous bunches, and hangs late.

Black Hambro'—A delicious Grape, best for general use.

Bowood Muscat—A first-class variety.

Buckland Sweetwater-White, an excellent early Grape. Calabrian Raisin.

Chasselas Musque.

Duke of Buccleuch—Amber; largest white-berried Grape in cultivation; good companion to Black transburgh.

Foster's Seedling-White; early and good.

Golden Queen-Amber; bunches large, flesh firm.

Gros Colmar-Black, late; very large berries. --

Gros Maroc-Black.

Gros White Maroc-White.

Lady Downe's Seedling-Black, late; hanging, firm flesh.

Madresfield Court—Black; well suited for cool vinery.

Mrs. Pince's Black Muscat-Fine colour; late.

Muscat of Alexandria-White; requires heat; late.

Muscat Hambro'-Black; Muscat flavour.

Royal Muscadine - White; early, and one of the best for a wall outside.

Sweetwater — Old white, a sweet and refreshing white. Grape; succeeds in the open air.

Trebbiano-White; large, good; late.

West's St. Peters.

Fine Grown Canes, 5s., 7s. 6d., and 10s. 6d. cach.

CHRYSANTHEMUMS.

OF these we have the largest, finest, and best kept collection in the world. For full particulars send for our special Catalogue, which is acknowledged to be very much the best book on the whole family ever published. Sent post free for 4d. Customers free.

List of New Varieties, see fore part of Plant Catalogue.

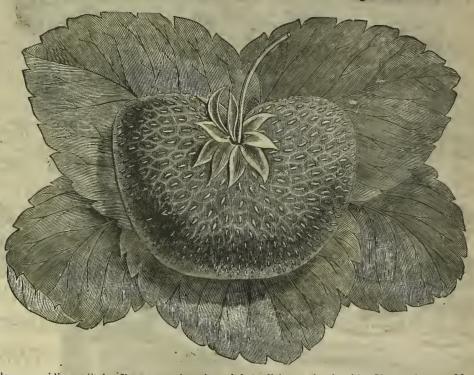

(122)

GRAND NEW STRAWBERRY.

"GEORGE RUNDLE."

An Improvement on "British Queen."

The above-named gentleman, residing at Stoke, Devonport, the raiser of the well-known lovely white Chrysauthemam Mrs. George Randle, and which has now been admired for many years, must be included with the very few genuine amateur raisers who love their gardens always with the purest intentious, and doing all that is possible to benefit horticulture. He has raised many seedling Strawberries, but this is the gent, he says, for a new variety this possesses above and beyond what most other new sorts cannot lay claim to, and that is, "an advance on all other kinds." Like us, he is an admirer of British Queen—that lady and Strawberry seem to have become noted about the same time—no other bore comparison to its lovely flavour until George Rundle made its appearance. This has the same delicious taste, large cockscomb-shaped fruit, and its pleasant juicy flavour reminds one, after it is down, of a glass of wine, causing one to smack the lips for another and another, instead of looking round for the sugar to reduce the acidity. It is certainly in the same way, and a great improvement ou British Queen, Dr. Hogg, &c.

DESCRIPTION.—Fruit and colour like British Queen, light red, large size, often weighing more than an onnce; strong grower, distinct dark green foliage, and fruiting freely. As a new Strawberry it will soon recommend itself as being the best distinct variety yet raised for eating since British Queen, and producing three times the quantity of fruit. 2s each; four plants, 6s.; eight plants, 9s.; twelve plants, 10s. 6d.

We respectfully solicit orders for ours, the finest plants and most complete collection in England. Swanley is the largest and best Strawberry-growing district in the world.

Eight Acres, grown entirely for the Runner Plants, at a distance of 4 ft. from plant to plant, on purpose so that every plant is true.

Strawberries, like Potatoes, are always more fruitful when given a change of soil, consequently success depends a good deal on having runners from a purely different soil.

Our Establishment being located in the midst of hundreds of acres of all the best Strawberries and Raspberries enables as to offer fine plants and good sure-cropping kinds at the lowest prices.

Swanley has again this season far excelled all other localities for its quantity and quality of fruit. Rooted Runners from fruiting plants, all best rooted and pieked. 5s. per 100; in small pots. to fruit the first season, 12s. to 14s. per 100; in 5 and 6-inch pots, for forcing, 25s. to 40s. per 100.

Special Prices per 1,000, 50,000, and 100,000.

OLD AND YOUNG SHOULD EAT APPLES.

THE VALUE OF APPLES AS FOOD.

There is propably a good dietetic reason underlying our accepted use of apples, or apple sauce, with pork, rich goese, Yorkshire pasty, mincement, and similar dishes. Apples have excellent medical qualities. Chemically, the apple is composed of vegetable fibre, albumen, sngar, gum, chlorophyl, mallic acid, gallic acid, lime, and much water. Furthermore, the German analysts say that the apple contains a larger percentage of phosphorus than any other fruit or vegetable. The phosphorus is udmirably adapted for renewing the essential nervous matter, lecithin, of the brain and spinal cord. It is, perhaps for the same reason, rudely understood that the old Scandinaviaa traditions represent the apple as the food of the gods, who, when they felt themselves to be growing feeble and infirm, resort to this fruit for renewing their powers of mind and body. The acids of the apple are of signal use to men of sedentary habits, whose livers are sluggish in action, those acids serving to eliminate from the body noxious matters, which, if retained, would make the brain heavy and dull, or bring about jaundice or skin eruptions or similar troubles. The mallic acid of ripe apples (either raw or cooked) will neutralise any excess of chalky matter engendered by eating too much meat. It is also a fact that such fresh fruits us the apple, the pear, and the plum, when taken ripe and without sngar, diminish acidity in the stomach rather than provoke it. Their vegetable sauces and juices are converted into alkaline carbonates, which tend to counteract acidity.

DAILY 'CHRONICLE.

Messrs. H. Cannell and Sons, Swauley, had a large exhibition of fruit in the main building, illustrating unmistakably Kentish culture, proved very interesting. Silver Medal was awarded.

DAILY GRAPHIC.

Messrs. Cannell showed an admirable and complete collection of apples and other fruit, the whole showing unmistakable evidence of the superior culture of Kentish gardens.

THE GARDEN.-September 30th, 1893.

Messrs, Cannell and Sons, Swanley, occupied a large space showing a collection of apples. The best dishes were Colonel Vaughan, Scarlet Nonpareil, Cox's Orange, Queen Caroline, Emperor Alexander, King of the Pippins, and some seedlings of great merit. Silver Knightiau Medal.

THE GARDENERS' MAGAZINE.—September 30th, 1893.

Messrs, H. Cannell and Sons, Swanley and Eynsford, exhibited a large collection of apples which showed how well suited their nurseries at Eynsford are for these fruits. The examples were throughout above the average in size and very highly coloured. The Council awarded it a Silver Knightian Medal. (Royal Horticultural Society's Show.)

Messrs. Cannell had an excellent collection of fruit. (Earl's Court Show.)
